

WAVE PROCESSOR 9335

Recorders 

Display, Convert, Calculate, and Print Waveforms with a PC

8855

Use Windows application software to display, convert, calculate and print large volumes of waveform data on a PC

The **WAVE PROCESSOR 9335** is application software for Windows that enables users to display, print, convert, and calculate on large volumes of waveform data that has been recorded and collected by instruments in the **MEMORY HiCORDER Series**. In addition to being able to handle data recorded by existing **MEMORY HiCORDERs**, the **9335** can also handle in excess of 1GB of waveform data recorded by the **MEMORY HiCORDER 8855**. This new PC application also includes functions for checking and analyzing measured results, such as conditional search, numeric calculations, and cursor measurement.

Check waveforms and measured results on a PC

Waveform Display Screen and X-Y Display Screen

The 9335 lets you load binary files from a MEMORY HiCORDER and then check the waveform or measured results on the Waveform Display Screen and the Numeric Display Screen. The 9335 also supports the memory recorder function X-Y display. The Waveform Display Screen and the X-Y Display Screen also can be split into graphs for each channel.

Trigger Time	CH1[V]	CH2[V]
0d0h 0m0 006s	9.37000000	7.55000000
0d0h 0m0 005s	9.88000000	7.93000000
0d0h 0m0 004s	9.47000000	7.61000000
0d0h 0m0 003s	8.07000000	6.46000000
0d0h 0m0 002s	5.67000000	4.75000000
0d0h 0m0 001s	3.10000000	2.50000000
0d0h 0m0 0s	0.02000000	0.06000000
0d0h 0m0 001s	-3.07000000	-2.42000000
0d0h 0m0 002s	-5.85000000	-4.61000000
0d0h 0m0 003s	-8.10000000	-6.47000000
0d0h 0m0 004s	-9.58000000	-7.59000000

Trace cursor screen

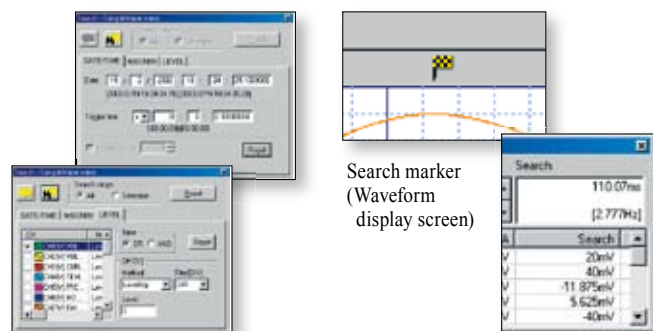

Voltage cursor screen

Fast search by date, time, level, etc.

The 9335 allows you to jump to a position that satisfies certain conditions, and display the waveform and the measured value at that position. This function can also be used as a re-trigger function.

The following search criteria can also be specified:

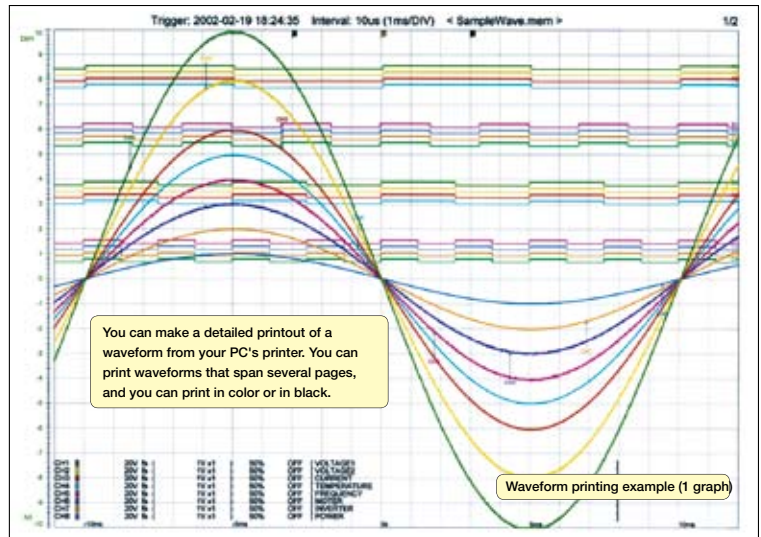

- Date and time
- Maximum value
- Absolute maximum value
- Level up
- Window in
- Logic pattern (logic data only)
- Event mark
- Minimum value
- Absolute minimum value
- Level down
- Window out

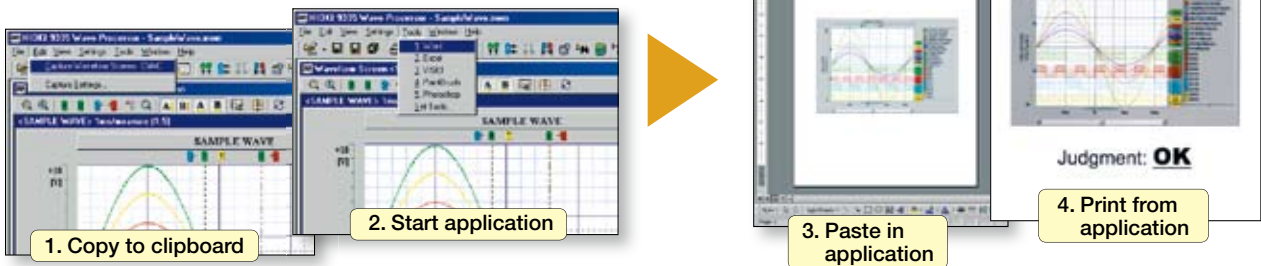

Settings screen for search criteria (Top: Time search; bottom: Conditional search)

Measurement value at the search position (Cursor screen)

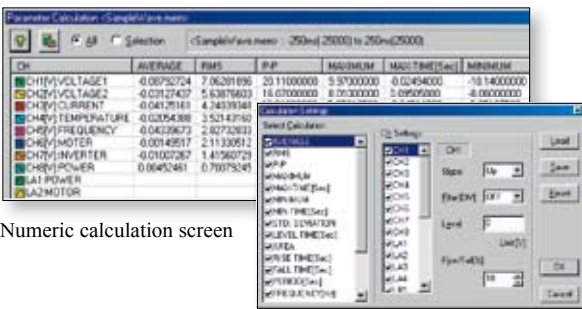

Printing and copying the waveform screen

When a waveform is displayed on the screen, you can copy that waveform to the Windows clipboard, or make a hardcopy of the waveform. You can also paste the waveform into text, as well as associate the waveform with whatever application you want to start when you open that waveform.

Statistical functions make data evaluation easy

Numeric calculation screen

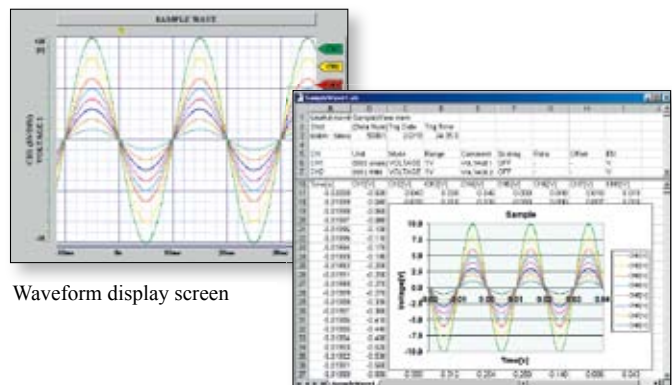

Calculation setup screen

19 types of numerical calculations can be displayed for all the areas or a specific area only. In addition to effective value, maximum value, frequency, and other standard values, you can also calculate values for characteristics such as duty ratio and rise time.

Use the **WAVE PROCESSOR** to calculate the following: average value, maximum value, minimum value, maximum time, minimum time, peak-to-peak value, effective value, area, standard deviation, ON time, OFF time, number of times turned ON, frequency, period, duty ratio, pulse width, rise time, fall time, time to level

Converting data to CSV format

A displayed waveform can be converted into a CSV file, either in whole or in part. Cropping on/off, the cropping method, the time axis format, and other variables can be set. Converting to a CSV file allows you to use the data with spreadsheet software, etc.

A sample screen showing data that has been converted into CSV format and opened in Excel.

Note: Supports 8860-50/8860, 8861-50/8861 series MEM, REC and REC&MEM data recorded using single-axis sampling only.

(Note) The use of MO disks, PC cards, and floppy disks and the availability of a LAN connection depend on the specifications of the recorder model in question.

● Displaying and printing measurement results through a PC

The **WAVE PROCESSOR 9335** is a PC application software that can be used to display and print waveform data recorded by a **MEMORY HiCORDER**, such as the **8855** or the **8841, 8842**.

The application can load more than 1GB of waveform data recorded by the **MEMORY HiCORDER 8855**. (The maximum size of data files that can be handled in Windows 95/98/Me is 1GB, and may be less depending on the PC environment.)

Waveform data files can be transferred from a **MEMORY HiCORDER** to a PC via a PC card, MO disc, floppy disk, or LAN connection.

● Multiple display screens

In addition to a waveform display screen, the **9335** also provides a numeric value display screen and an X-Y display screen. Waveform data can also be displayed in multiple display screens simultaneously for comparison. The **9335** can also display a search screen, numeric calculation screen, cursor screen and other screens that can be used for detailed study and analysis.

● Support for creating reports with the print and copy functions

You can make detailed printouts of waveforms from your PC's printer, as well as select color or black and white printing, screen partitions, gauges, and other options. Make a hard copy of the waveform image that is displayed on the screen, or copy it to the clipboard. Edit the data using a word processor such as Word by simply pasting the image into documents.

● Converting data and opening it in spreadsheets

Widely used spreadsheet programs can be used to edit measurement data and create reports. The **WAVE PROCESSOR 9335** allows you to convert acquired waveform data to CSV format.

WAVE PROCESSOR 9335

Compatible with Windows 2000/XP/Vista (32-bit), Windows 7 (32/64-bit)

Specifications	
Compatible devices	<p>Model 8861-50/8860-50 (9335 ver.1.13 or later, not compatible with dual time-axis data, compatible only to MEM, REC, and REC & MEM data recorded using single-axis sampling only),</p> <p>Model 8861/8860 (9335 ver.1.10 or later, not compatible with dual time-axis data, compatible only to MEM, REC, and REC & MEM data recorded using single-axis sampling only),</p> <p>Model 8870, 8855, 8847, 8842, 8841, 8840, 8835-01, 8835, 8826, 8825, 8808-01, 8807-01, 8808-51, 8807-51 (excluding harmonic analysis function), 8731-10, 8730-10, 8720, 8715-01, 8714-01</p>
Supplied Media	One CD-R disc
Operating environment	<p>Personal computer equipped with Pentium (133 MHz) or better CPU and at least 32 MB of memory,</p> <p>Running under Windows 2000/XP/Vista (32-bit), or Windows 7 (32-bit/64-bit) (Recommended system: Pentium (200 MHz) or better with at least 64 MB of memory)</p>
Display functions	<p>■ Waveform Display: Displays image of loaded waveform data on screen</p> <p>■ X-Y display: Memory (MEM) and power (.POW) only</p> <p>■ Digital Value Display: Displays waveform data as digital values, and allows images and digital values to be displayed simultaneously</p> <p>■ Cursor function: Allows you to display the time and potential differences between cursors A and B, the time and electrical potential between each cursor, and the absolute and relative times</p> <p>■ Scroll function</p> <p>■ Maximum number of channels: 32 analog channels, 32 logic channels</p> <p>■ Gauge display: Time gauge, voltage axis gauge</p> <p>■ Graphical input</p>
File loading	<p>■ Loading data format: Memory (.MEM, except for data stored in real time); recorder (.REC), effective value recorder (.RMS), power (.POW)</p> <p>■ Maximum loadable file size: Maximum size that can be stored by hardware (The maximum size that can be handled may be smaller in some PC environments.)</p>
Data conversion functions	<p>■ Target data: All data, data between cursors</p> <p>■ Data interval: Simple interval (number of samples can be specified)</p> <p>■ Data conversion: Converts analog waveform data into numeric values, converts logic data into binary</p> <p>■ Data conversion format: CSV format, tab delimited, space delimited (selectable when data is saved)</p> <p>■ Conversion channel: Can be selected when data is saved</p> <p>■ Batch conversion: Multiple files can be specified for batch conversion</p>
Printing functions	<p>■ Printing format: Can print with no partitions, 2 to 16 partitions, 2 to 16 columns, X-Y 1 to 4 partitions, gauges, channel comments</p> <p>■ Print preview</p> <p>■ Waveform screen hard copy</p> <p>■ Compatible printers: Any printer supported by the OS (color or black and white)</p>
Parameter calculation functions	<p>■ Target data: All data, data between cursors</p> <p>■ Calculation items: Average value, effective value, peak value, maximum value, time of maximum value, minimum value, time of minimum value, rise time, fall time, standard deviation, area, cycle, frequency, pulse width, duty ratio, ON time, OFF time, number of times turned ON</p>
Other	<p>■ Search functions: Event mark, date and time (absolute time, time relative to trigger), maximum, minimum, absolute maximum, absolute minimum, level up/down, window in/out</p> <p>■ Clipboard copy: Waveform screen, cursor value, digital value, file information</p> <p>■ Startup of other applications: Other applications can be launched by specifying run file</p>
