GB Power Quality Statistics Report

# Maintain and manage power supplies and analyze problems more easily and reliably than ever before

# POWER QUALITY ANALYZER PQ3198 and PQ3100

The critical importance of electrical power in today's society necessitates daily maintenance and management to ensure that problems don't occur. When they do, for example due to an equipment failure or abrupt surge in demand, engineers face the need to analyze the cause quickly.

The POWER QUALITY ANALYZER PQ3198 and PQ3100 provide robust support for field personnel who need to analyze power characteristics in the form of measurement capabilities that reliably captures the full range of power anomalies and exceptional ease of use throughout the entire user experience, from connecting the instrument to recording data.

#### IEC 61000-4-30 Ed. 3 compliant

IEC61000-4-30 is an international standard that specifies methods for measuring power supply quality, Equipment certified as complying with this standard provides reliable and repeatable measurement results.

#### Analyze equipment power problems

Capture the full range of power supply anomalies, including momentary interruptions, voltage drops, and frequency fluctuations, while recording trends to help investigate the causes of unexpected equipment malfunctions and sudden stoppages.

#### Record quality data for power systems

Record fluctuations in voltage, current, power, harmonics, and flicker when connecting a highly variable system such as a renewable energy source or EV charging station to the grid. Easily analyze the data with the included PQ ONE software.

### Measure AC/DC power

Use AC/DC auto-zero current sensors to measure DC current accurately over extended periods of time. Since the sensors are powered by the instrument, there's no need to set up a separate power supply.

# Troubleshoot power supplies and verify power quality PQ3198

#### Features

Class A compliance under international standards

Basic voltage measurement accuracy of ±0.1%

High-voltage, wideband performance

Two-circuit measurement

Simple inverter measurement

400 Hz line measurement

GPS time synchronization

Extensive array of event measurement parameters

Applications

Investigate power supply anomalies

Investigate the causes of equipment failures and malfunctions, including issues that are difficult to identify, such as when a device causes a properly-functioning piece of equipment that is connected to the same power outlet to experience a voltage drop.

Verify the quality of power from a solar power system

Check fluctuations in the output voltage of a power conditioner in a solar power system along with flicker and transient voltages. You can also measure fluctuations in the frequency of the grid interconnection and fluctuations in the harmonic voltage and current components of the system's output.

# Verify the quality of power supplied by an EV rapid charger

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits. For example, you can verify the quality of the input (AC) and output (DC) of an EV rapid charger while simultaneously measuring power and efficiency between input and output.

# High-precision, wideband, broad-dynamic-range measurement

The PQ3198 delivers the high-end specifications and high reliability needed to capture the full range of power anomalies and analyze the underlying data with a high degree of precision.

#### International standard IEC 61000-4-30 Ed. 3 Class A compliant

The PQ3198 complies with the IEC 61000-4-30 Ed. 3 Class A standard. As a result, it can perform standard-mandated measurement tasks such as gapless, continuous calculation; detection of events such as swells, dips, and interruptions; and time synchronization using GPS (optional).

#### Basic measurement accuracy (50/60 Hz)

Voltage	±0.1% of nominal voltage
Current	±0.1% rdg. ±0.1% f.s. + current sensor accuracy
Power	±0.2% rdg. ±0.1% f.s. + current sensor accuracy
Frequency	200ms: ±0.02Hz / 10s: ±0.003Hz

Thanks to basic measurement accuracy that is among the best of any instrument in the industry, the PQ3198 offers high-precision measurement without the need to switch voltage ranges.

#### Class A

Part of the IEC 61000-4-30 international standard, Class A defines power quality parameters, accuracy, and standard compliance to facilitate the comparison and discussion of measurement results from different instruments.

#### High-voltage, wideband performance

The PQ3198 can measure transient voltages of up to 6000 V lasting as little as  $0.5 \ \mu s$  (2 MS/s). It can also measure high-order harmonic (supraharmonic) components from 2 kHz to 80 kHz. As inverters enter into widespread use, malfunctions and failures in that frequency band are becoming more common.

#### Voltage measurement range

Voltage frequency band

The PQ3198's wideband capability extends from DC voltages to 700 kHz.

The PQ3198 can measure voltages of all magnitudes using a single range.

#### Two-circuit measurement

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits.

#### Applications

- Simultaneous measurement/monitoring of the primary (AC) and secondary (DC) sides of an EV rapid charger
- Simultaneous measurement/monitoring of the primary (DC) and secondary (AC) sides of a solar power system
- Simultaneous measurement of the primary (DC) and secondary (AC) sides of a DC/AC (3-phase) inverter
- Simultaneous measurement of the primary and secondary sides of a UPS
- Simultaneous measurement of power supply (AC) and control (DC) circuits
- Simultaneous measurement of a 3-phase line and a ground line
- Simultaneous measurement of a neutral line to detect ground \*For DC measurement, an AC/DC Auto-Zero Current Sensor is required

In addition to 50/60 Hz, the PQ3198 can measure a line frequency of 400 Hz.

#### Simple inverter measurement

The PQ3198 can measure the secondary side of inverters with a fundamental frequency of 40 to 70 Hz and a carrier frequency of up to 20 kHz. It can also measure the efficiency of DC/3-phase inverters.

#### GPS time synchronization

The GPS OPTION PW9005 can be used to correct the instrument's internal time to UTC standard time. This capability eliminates any time difference between instruments to allow analysis that preserves the simultaneity of phenomena measured with multiple instruments.

#### Mid-range model

Investigate power supply conditions and prevent problems PQ3100

#### Features

#### Applications

Investigate power supply conditions

Measure voltage fluctuations, equipment capacity, and harmonics before installing new electrical equipment. You can also check whether newly installed equipment is affecting other equipment by repeating those measurements after installation and comparing the results.

Prevent power supply problems

Discover signs of impending problems by repeatedly measuring a component such as an elevator motor on a regular basis. Flexible current sensors make it possible to connect the instrument safely and easily, even in difficult settings involving double wiring, busbars, and crowded distribution boards.

Perform load rejection testing of solar power systems

In load rejection testing, it's necessary to record transient changes in current and voltage when the system is taken offline. The PQ3100 can record anomalous waveforms for up to 11 seconds (1 second before and 10 after each event). Cursor measurement lets you verify peak values and duration as well.

# QUICK SET: Easy-to-understand measurement guidance

Launch QUICK SET to navigate the connection and setup processes so you can get started recording quickly.

You need only set the recording parameters and interval in order to start measurement. Recording parameters can be set simply by choosing a simple setup preset. (See page 8 for details.)

#### Recording of 11 sec. before and after events

The PQ3100 can record waveforms for up to 1 second before an anomaly and 10 seconds after. This capability is useful when you need to analyze waveforms before and after an anomaly, perform load rejection testing of a solar power conditioner, or verify that a piece of equipment has returned to normal operation.

#### Up to 8 hours of battery operation

The PQ3100 features an energy-saving design and a longlasting battery. The bundled rechargeable battery lets you continue measurement in the event of a power outage or take the instrument into the field to make measurements in locations where AC power is not available.

#### Display of event statistics

Check the number of times each type of event has occurred as well as the worst value for each.

#### Demand recording

Record power consumption over time.

# Measurement functionality and data recording capabilities that ensure you'll capture the full picture with a single measurement

# Capture power anomalies reliably with simple settings

The PQ3198 and PQ3100 can measure all parameters at once, including power, harmonics, and anomaly waveforms. The instruments also provide simple setup functionality for automatically configuring recording parameters for popular applications.

Capture power supply anomalies reliably

#### Transient voltages

Capture phenomena characterized by precipitous voltage changes and high peak values caused by lightning or circuit breaker or relay contact issues or tripping.

#### Voltage swells

Capture phenomena characterized by a momentary rise in voltage, for example due to lightning or power line switching.

#### Voltage dips

Capture phenomena characterized by a short-duration drop in voltage when a large inrush current occurs, for example due to motor startup.

#### Interruptions

Capture phenomena characterized by a stoppage in the supply of power, for example when lightning interrupts power or when a power supply shortcircuit trips a circuit breaker.

#### Frequency fluctuations

Capture frequency fluctuations caused when generator operation becomes unstable due to an abrupt increase or decrease in load.

# or <u>00000</u>

#### Simple, one-touch setup

# Simple setup functionality for simplified configuration of recording parameters

Simply choose the preset that suits your application, and the instrument will automatically configure the recording parameters.

Voltage anomaly detection
Basic power quality measurement *1
Inrush current measurement
Measured value recording '2
EN 50160

Capture voltage and frequency anomalies. Augment the voltage anomaly detection preset by capturing current and harmonic anomalies as well Capture inrush current.

Record only time-series data.

Perform measurement based on the EN 50160 standard.

\*1: PQ3198 only. \*2: This feature is known as "Trends only" for the PQ3100.

#### Automatic sensor detection to avoid erroneous measurement

Simply connect current sensors, touch "Sensor" on the screen, and the instrument will automatically detect sensor types and maximum current ranges.

Connect sensors > Touch "Sensor" for automatic identification

#### Inrush current Capture phenomena

characterized by a large current that flows momentarily when a device starts up upon receiving power, for example electric equipment and motors.

#### Harmonics

Capture phenomena characterized by distortions in voltage and current waveforms that are caused by semiconductor control devices.

#### High-order harmonics (Supraharmonics)

Capture phenomena characterized by distortions in voltage and current waveforms caused by noise components from semiconductor control devices such as those used in electronic device power supplies.

#### Unbalance

Observe voltage and current waveform distortion, voltage dips, and negative-phase-sequence voltage that occur when the loads connected to individual phases in a 3-phase power supply change or when unstable equipment operation increases the load on a specific phase.

#### Easy-to-understand display of parameters

Since you can switch the display to show all measurement parameters while measurement is underway, it's easy to check conditions. \*Screenshot shows the PQ3100 display.

Extensive event parameters

Simple, one-touch setup

Vectors

# Simultaneously record event waveforms and trend graphs

Each time it makes a measurement, the PQ3198/PQ3100 records trend data for all parameters. When a power anomaly is detected, an event is recorded. Since the instrument records the maximum, minimum, and average values during the interval, you can rest assured that you won't miss peak values.

#### Simultaneous recording of waveforms and trend data

#### Event waveform

When an event occurs, the instrument records the instantaneous waveform for 0.2 seconds. Triggers can be set for all event parameters in parallel, and you can check recorded data on the display while measurement is in progress.

#### Flicker

The PQ3198/PQ3100 can simultaneously measure and record three channels of ΔV10 or IEC flicker.

#### $\Delta$ -Y, Y- $\Delta$ conversion function

When measuring a 3-phase/3-wire (3P3W3M) circuit or a 3-phase/4-wire circuit, the PQ3198/ PQ3100 can switch between phase voltage and line voltage without changing the voltage connections.

Extensive

range of

recording pa-

rameters

# Designed to accommodate every possible application so that it's easy to use in all field settings

# Clamp sensors for every application

# Flexible sensors: Easy installation in confined locations

Flexible current sensors provide a convenient way to measure double- and triple-wired power supplies and in confined locations, with capacities of up to 6000 A.

#### No need for an external power supply

Since sensor power is supplied by the instrument, there's no need for an AC adapter when using AC/DC sensors or flexible sensors.

# Auto-zero sensors: Stable measurement of DC power over extended periods of time

Auto-zero current sensors allow measurement of DC power over extended periods of time, eliminating the need to concern yourself with zero-point drift.

#### Wide array of ranges to accommodate all applications

Use HIOKI sensors in an array of applications to measure equipment ranging from the secondary side of CTs to high-current wiring. The CT7136 offers three ranges\* (5 A/50 A/500 A), as do HIOKI's flexible sensors (50 A/500 A/5000 A). Since the effective measurement range extends to 120% of the nominal range, flexible sensors can be used to measure currents of up to 6000 A. \*PQ3100 (PQ3198: 2 ranges [50 A/500 A]).

Delivering both safety and high accuracy

#### Exceptional safety

The PQ3100 supports CAT III (1000 V\*) and CAT IV (600 V) situations, so it can safely measure service drops and distribution panels with a terminal-to-ground voltage of up to 1000 V. \*PQ3100 only (PQ3198: CAT IV [600 V]).

#### High accuracy

The PQ3198 complies with IEC 61000-4-30 Ed. 3 Class A, and the PQ3100 with IEC 61000-4-30 Class S, ensuring both instruments' ability to deliver highly reliable, high-precision measurement.

	PQ3198	PQ3100
Voltage RMS value accuracy	±0.1% of nominal voltage	±0.2% of nominal voltage
Swell/dip/interruption	±0.2% of nominal voltage	±0.3% of nominal voltage

# **Convenient tools**

#### When it's hard to clip leads to terminals

In locations where it's hard to attach alligator clip-style leads to metal terminals, you can replace the tips of the voltage cords with magnetic adapters so that you can more easily detect the voltage.

Magnetic adapters are easy to affix to terminals in confined locations.

Magnetic design (diameter: 11 mm)

Magnetic adapters Red: 9804-01 Black: 9804-02

#### Secure the PQA to the side of a distribution panel

Use two heavy-duty magnetic straps to attach the instrument to the side or door of a distribution panel.

Magnetic straps can also be used to help keep voltage cords from coming loose.

Heavy-duty type: Z5020 Standard type: Z5004

### Extended recording times supports permanent installation

#### Extended recording to an SD memory card

The PQ3198/PQ3100 can record time-series data and event waveforms to an SD memory card. Choose from 2 GB and 8 GB cards.

+	129	15:57:19.469	Uthd	OUT	OH1

Click the event statistics bar graph to display the event list.

#### Trend graphs

Display voltage, current, frequency, harmonics, unbalance factor, power, energy, and other data as a time series. Set the display range as desired on the screen and output reports with the shown data. PQ ONE can generate a demand display for the PQ3198, even though that model does not include demand measurement.

Choose the measurement parameter, channel, or max./min./avg. value.

#### Peak level display

Display a bar graph showing peak values during the voltage harmonic or current harmonic trend display interval. You can check average peak and maximum peak measured values for the period of time selected with the cursor to the right of the graph.

Peak level detection interval

Average peak and maximum peak details

#### High-order harmonics (Supraharmonics) and frequency analysis display\*1

Display high-order harmonics\*<sup>2</sup> event waveforms (2 to 80 kHz) and associated frequency analysis data. By displaying the frequency analysis, you can determine the frequency band in which noise is occurring.

Example high-order harmonics\*2 and frequency analysis screen \*1: PQ3198 only. \*2: Supraharmonics.

#### Statistics display function

Present statistical data for voltage, current, frequency, harmonics, flicker and other parameters on the Statistics screen. You can also see the maximum and minimum (with time of occurrence), average, 5%, 50%, or 95% of the value (default values, user settable) of any selected parameter.

Example frequency screen

#### EN 50160 judgment function

Evaluate whether data complies with the EN 50160 standard by analyzing it and generating a judgment based on voltage fluctuations during the trend interval. You can also customize the judgment criteria and parameters.

Input terminal type Connections	Voltage: Plug-in terminals (safety terminals) / Current: Dedicated co Any of the following + additional input to CH 4: 1-phase/2-wire	3-phase/3-wire/2 power meter 3-phase/4-wire/2.5 element
	1-phase/3-wire 1-phase/3-wire/1 voltme	3-phase/3-wire/3 power meter er *PQ3100 only 3-phase/4-wire
nput resistance	Voltage inputs: $4 M\Omega / Current inputs: 100 k\Omega$	Voltage inputs: 5 M $\Omega$ / Current inputs: 200 k $\Omega$
Maximum input voltage Maximum rated terminal-	Voltage inputs: 1000 V AC, ±600 V DC, 6000 Vpeak 600 V AC (CAT IV) with an expected transient overvoltage of 8000 V	Voltage inputs: 1000 V AC/DC, 2200 Vpeak 1000 V AC (CAT III) or 600 V AC (CAT IV) with an expected transient
to-ground voltage		overvoltage of 8000 V
Sampling frequency	Parameters other than transient voltage: 200 kHz; transient voltage: $\ensuremath{MHz}$	2 200 kHz for all parameters
A/D converter resolution	Parameters other than transient voltage: 16 bits; transient voltage: 1 bits	16 bits
Display range	Voltage: 0.48 V to 780 V / Current: 0.5% to 130% of range	Voltage: 2 V to 1300 V / Current: 0.4% to 130% of range
	Power: 0.0% to 130% of range Parameters other than above: 0% to 130% of range	
Effective measurement	Voltage: 10 V to 780 V AC, peak of ±2200 V / 1 V to 600 V DC	Voltage: 10 V to 1000 V AC, peak of ±2200 V / 5 V to 1000 V DC
ranges	Current: 1% to 120% of range, peak of ±400% of range	Current: 5% to 120% of range, peak of ±400% of range
	Power: 0.15% to 130% of range (When voltage and current both fall within the effective measurement ra	Power: 5% to 120% of range (When voltage and current both fall within the effective measurement range)
Accuracy specification	ons	
Accuracy guarantee	Accuracy guarantee duration: 1 year	
conditions	Accuracy guarantee temperature and humidity range: 23°C ±5°C, 8	
Common-mode voltage	0.03% f.s./°C (DC measurement, add ±0.05% f.s./°C) Within 0.2% f.s. (600 Vrms AC, 50 Hz/60 Hz, between voltage input	
effects External magnetic field	enclosure) Voltage: Within ±3 V	enclosure)           Within 1.5% f.s. (400 Arms/m AC, in 50 Hz/60 Hz magnetic field)

Recording settings	PQ3198	PQ3100
Recording interval	1/3/15/30 sec., 1/5/10/15/30 min., 1/2 hr.,	200/600 ms, 1/2/5/10/15/30 sec., 1/2/5/10/15/30 min., 1/2 hr., 150/180
	150 (50 Hz)/180 (60 Hz)/1200 (400 Hz) cycle	cycle *When set to 200/600 ms, harmonic data saving (except total harmonic
		distortion and K factor), event recording, and copy key operation during recording are not available.
Saving of screenshots	Off/On The display screen is saved as a BMP file for each recording interval. Mir	n. interval: 5 min.
Folder/file names	Not user-configurable	Set to either automatic or user-specified (5 single-byte characters).
Event specifications		
Event detection method	The detection method for measured values for each event is noted in the External events: Events are detected by detecting a signal input to the EV Manual events: Events are detected based on operation of the MANUAL	/ENT IN terminal.
Synchronized saving of events	Event waveforms: A 200 ms instantaneous waveform is recorded when an event occurs.	Event waveforms: A 200 ms instantaneous waveform is recorded when an event occurs.
	Transient waveform: Instantaneous waveforms are recorded for 2 ms before the transient voltage waveform detection	Transient waveform: Instantaneous waveforms are recorded for 1 ms before the transient voltage waveform detection
	point and for 2 ms after the detection point. Fluctuation data: RMS value fluctuation data is recorded every half-wave	point and 2 ms after the detection point
	for the equivalent of 0.5 sec. before the event occurs and 29.5 sec. after the event occurs.	for the equivalent of 0.5 sec. before the event occurs and 29.5 sec. after the event occurs.
	High-order harmonic* waveform: A 40 ms instantaneous waveform is recorded when a high-order harmonic*	
	event occurs.	
	* Supraharmonic	
Event settings	0% to 100%	
Fimer event count	Off, 1/5/10/30 min., 1/2 hr.	Off, 1/2/5/10/15/30 min., 1/2 hr.
Waveforms before	Events are generated at the selected interval. 2 waves	Events are generated at the selected interval. Off (0 sec.) / 200 ms / 1 sec.
events		The time for which to record instantaneous waveforms before events occur can be set.
Waveforms after events	Successive events: Off/1/2/3/4/5	Off (0 sec.)/200 ms/400 ms/1 sec./5 sec./10 sec.
	The set number of events is repeated each time an event occurs.	The time for which to record instantaneous waveforms after events occur can be set.
Other functionality		
Copying of screenshots Removal of SD card	Copy using the COPY key; results are saved to the SD card. Data formation Not supported	at: Compressed BMP A messages is displayed if the user pressed the F key on the FILE
while recording data	Not supported	screen while recording with a recording interval of 2 sec. or greater; the SD card can be removed once message is reviewed.
Automatic detection of	When selected on the settings screen, connected sensors that support th	, ,
current sensors Processing in the event	If the instrument is equipped with a BATTERY PACK Z1003 with a remain	ing charge, the instrument will switch automatically to battery power apo
of a power outage	continue recording. If no charged BATTERY PACK Z1003 is installed, me start recording again when power is restored. However, integrated values	asurement will stop (settings will be preserved), and the instrument will

Model	AC LEAK CURRENT SENSOR CT7116				
Appearance	Designed specifically for leak current measurement				
Rated measured current	6 A AC				
Measurable conductor diameter	40 mm or less (insulated conductor)				
Current range and combined amplitude accuracy (45 to 66 Hz)	Current range         Combined accuracy           5.0000 A         1.1% rdg. + 0.16% f.s.           500.00 mA         1.1% rdg. + 0.7% f.s.           50.000 mA         1.1% rdg. + 6.1% f.s.				
Phase accuracy (45 to 66 Hz)	Within ±3°				
Frequency band	40 Hz to 5 kHz (±3.0% rdg. ±0.1% f.s.)				
Residual current characteristics	5 mA or less (for a pair of round-trip wires carrying 100 A)				
External magnetic field effects	5 mA equivalent, max. 7.5 mA (400 A/m, 50/60 Hz)				
Dimensions / weight / cord length	74 mm (2.91 in.) (W) × 145 mm (5.71 in.) (H) × 42 mm (1.65 in.) (D) / 340 g / 2.5 m (8.20 ft.)				

#### Voltage measurement options

HIOKI provides quotations for voltage cord extensions, terminal connector conversions, and other options on a case-by-case basis. Please contact your HIOKI distributor for details.

 MAGNETIC ADAPTER 9804-01

 Alternative tip for the L1000 series voltage cords, red ×1, φ11 mm (0.43 in)

 MAGNETIC ADAPTER 9804-02

 Alternative tip for the L1000 series voltage cords, black ×1, φ11 mm (0.43 in)

GRABBER CLIP L9243 Alternative tips for the L1000 series voltage cords

OUTLET TEST LEAD L1020 For Japan (3-prong, P/N/E), 2 m (6.56 ft) length, \*Please contact HIOKI for cords for use in

countries other than Japan.

#### Magnetic straps

MAGNETIC STRAP Z5004

MAGNETIC STRAP Z5020 Extra strength

#### PQ3198 options

WIRING ADAPTER PW9000 When three-phase 3-wire (3P3W3M) connection, the voltage cord to be connected can be reduced from 6 to 3

WIRING ADAPTER PW9001 When three-phase 4-wire connection (3P4W) the voltage cord to be connect

(3P4W), the voltage cord to be connected can be reduced from 6 to 4

PATCH CORD L1021-01 Banana branch-banana, Red: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000s, CAT IV 600 V, CAT III 1000 V

#### PATCH CORD L1021-02 Banana branch-banana, Black: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000 C CAT IV 600 V CAT IU 1000 V

L1000s, CAT IV 600 V, CAT III 1000 V

GPS BOX PW9005 To synchronize the PQ3198 / PW3198 clock to UTC

# Option for connecting legacy current sensor models

#### CONVERSION CABLE L9910

Output connector conversion: BNC  $\rightarrow$  PL 14

Use by connecting to one of the following legacy sensor models:

CLAMP ON SENSOR 9694/9660/9661/9669 AC FLEXIBLE CURRENT SENSOR CT9667-01/CT9667-02/CT9667-03 \*Conversion cable does not supply power to the sensor. CLAMP ON LEAK SENSOR 9657-10/9675

#### Current sensor options

EXTENSION CABLE L0220-01 2 m (6.56 ft.) EXTENSION CABLE L0220-02 5 m (16.50 ft.) EXTENSION CABLE L0220-03 10 m (32.81 ft.)

Interfaces

SD MEMORY CARD 2GB Z4001 2 GB capacity SD MEMORY CARD Z4003 8 GB capacity

RS-232C CABLE 9637 9 pin - 9 pin, cross, 1.8 m (5.91 ft) length

LAN CABLE 9642 Straight Ethernet cable, supplied with straight to cross conversion adapter, 5 m (16.41 ft) length

## About SD memory cards

Be sure to use genuine HIOKI SD memory cards with HIOKI instruments. Use of other SD memory cards may prevent data from being properly saved or loaded as proper operation is not guaranteed.

#### Carrying cases and waterproof boxes

CARRYING CASE C1009 Bag type, Includes compartment for options

CARRYING CASE C1002 Hard trunk type, Includes compartment for options

Waterproof box For outdoor installation, IP65

Included accessories (also available for separate purchase)

#### Comes with the PQ3100

VOLTAGE CORD L1000-05 Red/Yellow/Blue/Gray/Black each 1, 3 m (9.84 ft) length, Alligator clip ×5

AC ADAPTER Z1002 For main unit, 100 to 240 V AC

BATTERY PACK Z1003 NiMH, Charges while installed in the main unit
