DOCUMENT No.	TITLE LR8416 HEAT FLOW LOGGER , LR8410 WIRELESS LOGGING STATION LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER HIOKI 84series Labview Driver Manual (English)	PAGE 4
BACKGROUND		

1. Summary

These drives can change the setting of MEMORY HiLOGGER and read from MEMORY HiLOGGER. These drives are divided into some VI according to function. In this version, These drives can not deal with all control commands of MEMORY HiLOGGER INTERFACE.

These drives can control change the setting of LR8410 WIRELESS LOGGING STATION or LR8416 HEAT FLOW LOGGER or LR8400,LR8401,LR8402 MEMORY HiLOGGER through TCP/IP(LAN) and USB[Communication Device Class(CDC)].

(USB communication uses Driver in attachment CD of LR8410,LR8416 or LR8400.)

These drives can control change the setting of 8423 MEMORY HiLOGGER through TCP/IP(LAN)

2. Prerequisite condition

The following is the prerequisite condition of using these drive

- Knows LabVIEW

3. How to use driver

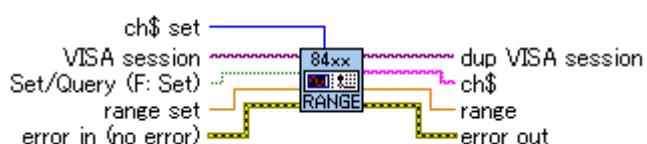

Searchs for the VI(driver) which deals with the control command of MEMORY HiLOGGER from program library, Connects the VISA session opened. Sets the Set/query, It is necessary to select the right parameters when performing setting, It is necessary to set header to OFF when performing querying.

All of the drivers have 2 common inputs and 2 common outputs as the following

input	
VISA session	on the top-left
error in (no error)	on the bottom-left
output	
dup VISA session	on the top-right
error out	on the bottom-right

Example: HIOKI84series Unit Range.vi.

HIOKI 84series Unit Range.vi

DOCUMENT No.	TITLE LR8416 HEAT FLOW LOGGER , LR8410 WIRELESS LOGGING STATION LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER	PAGE 5

4. Direction for driver use

4-1. Sort of Vi

The following is about drivers which are in program library.

	Name	Function / Communication command
1	HIOKI 84series IDN.vi	Queries device ID. *IDN?
2	HIOKI 84series OPT.vi	Queries device option provision. *OPT?
3	HIOKI 84series Reset.vi	Initializes the unit. *RST
4	HIOKI 84series TST.vi	Queries the result of ROM/RAM check. *TST?
5	HIOKI 84series OPC.vi	Replies with ASCII[1] after execution is completed. *OPC *OPC?
6	HIOKI 84series WAI.vi	After the execution of the command is completed, subsequently performs the following command. *WAI
7	HIOKI 84series CLS.vi	Clears the status bytes and associated queues(except for the output queue). *CLS
8	HIOKI 84series ESR.vi	Reads out and clears the contents of the standard even status register(SESR) *ESR?
9	HIOKI 84series STB.vi	Reads the status byte and MSS bit, without performing serial polling *STB
10	HIOKI 84series ESR0.vi	Reads event status register 0 (ESR0). :ESR0?
11	HIOKI 84series Start.vi	Performs starting. (Same as the START key of the unit) :STARt
12	HIOKI 84series Stop.vi	Performs stopping. (Same as the STOP key of the unit) :STOP
13	HIOKI 84series Abort.vi	Aborts processing. :ABORT
14	HIOKI 84series Conf Sample.vi	Changes or queries the recording interval . :CONFigure:SAMPLE A :CONFigure:SAMPLE?
15	HIOKI 84series Conf Rectime.vi	Sets or queries the recording time. :CONFigure:RECTime A,B,C,D :CONFigure:RECTime?

BACKGROUND	HIOKI 84series Labview Driver Manual (English)	

	Name	Function / Communication command
16	HIOKI 84series Conf Tdiv.vi	Sets or queries the time axis range. (for LR8410,LR8416,LR8400,LR8401,LR8402) :CONFigure:TDIV A :CONFigure:TDIV?
17	HIOKI 84series Unit Filter.vi	Sets or queries input channel filter. :UNIT:FILTter A\$:UNIT:FILTter?
18	HIOKI 84series Unit Wire.vi	Sets or queries input disconnection detection for tc mode (for LR8410,LR8416,LR8400,LR8401,LR8402) :UNIT:WIRE A\$:UNIT:WIRE?
19	HIOKI 84series Unit Wire_8423.vi	Sets or queries input disconnection detection for tc mode (for 8423) :UNIT:WIRE unit\$,ch\$,A\$:UNIT:WIRE? unit\$,ch\$
20	HIOKI 84series Unit Astore.vi	Sets or queries the store enable or disable for channel data record (for LR8400,LR8401,LR8402) :UNIT:STORe ch\$,A\$:UNIT:STORe? ch\$
21	HIOKI 84series Unit Astore_LR8410.vi	Sets or queries the store enable or disable for channel data record (for LR8410,LR8416) :UNIT:STORe ch\$,A\$:UNIT:STORe? ch\$
22	HIOKI 84series Unit Astore_8423.vi	Sets or queries the store enable or disable for channel data record. (for 8423) :UNIT:STORe unit\$,ch\$,A\$:UNIT:STORe? unit\$,ch\$
23	HIOKI 84series Unit Inmode.vi	Sets or queries the measurement mode of an input channel (for LR8400,LR8401,LR8402) :UNIT:INMMode ch\$,A\$:UNIT:INMMode? ch\$
24	HIOKI 84series Unit Inmode_LR8410.vi	Sets or queries the measurement mode of an input channel (for LR8410) :UNIT:INMMode ch\$,A\$:UNIT:INMMode? ch\$
25	HIOKI 84series Unit Inmode_LR8416.vi	Sets or queries the measurement mode of an input channel (for LR8416) :UNIT:INMMode ch\$,A\$:UNIT:INMMode? ch\$

DOCUMENT No.	TITLE LR8416 HEAT FLOW LOGGER , LR8410 WIRELESS LOGGING STATION LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER HIOKI 84series Labview Driver Manual (English)	PAGE 15
BACKGROUND		

The following is about other than the drivers which are in program library.

	Name	Function
1	HIOKI 84series Initialize.vi	Opens the VISA session, Initializes the interface or the MEMORY HiLOGGER.
2	HIOKI 84series Close.vi	Closes the VISA session.
3	Wait.vi	Sets the waiting time
4	HIOKI 84series DEMOLR8400.vi	It is a demo program for LR8400 MEMORY HiLOGGER
5	HIOKI 84series DEMOLR8410.vi	It is a demo program for LR8410 WIRELESS LOGGING STATION
6	HIOKI 84series DEMOLR8416.vi	It is a demo program for LR8416 HEAT FLOW LOGGER
7	HIOKI 84series DEMO8423.vi	It is a demo program for 8423 MEMORY HiLOGGER

DOCUMENT No.	TITLE LR8416 HEAT FLOW LOGGER , LR8410 WIRELESS LOGGING STATION LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER	PAGE 16
BACKGROUND	HIOKI 84series Labview Driver Manual (English)	

4-2. The common input and common output of drivers

All of the drivers have common inputs and outputs. The following is the explanation.

4-2-1. The common input of driver.

Name	Data type	Explanation
VISA Session		VISA session
error in (no error)		The input of error(refer to the manual of LabVIEW to get details). Initialized value: no error.

4-2-2. The common output of driver

Name	Data type	Explanation
dup VISA Session		The copy of VISA session.
error out		The output of error(refer to the manual of LabVIEW to get details).

DOCUMENT No.	TITLE LR8416 HEAT FLOW LOGGER , LR8410 WIRELESS LOGGING STATION LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER	PAGE 17

4-3. Details of VI

4-3-1. HIOKI 84series IDN.vi

Queries device ID.

Name	Data type	Explanation
Instrument ID	abc	The result of querying the device ID *

* First field: Manufacturer's name

Second field: Model name

Third field: Serial number (not used: 0)

Fourth field Software version

Reference command (the 8423.)

(1) *IDN? --- Queries device ID.

Syntax	(query)	*IDN?
	(response)	HIOKI, 8423, 0, V 1.00
		~~~~~ ^ ~~~ ^ ~~~~~
		1. 2. 3. 4.

Note 1. First field Manufacturer's name

2. Second field Model name

3. Third field Serial number (not used: 0)

4. Fourth field Software version

Reference command (the LR8400,LR8401,LR8402 command.)

(1) *IDN? --- Queries device ID.

Syntax	(query)	*IDN?
	(response)	HIOKI, LR8400, 100312345, V 1.00
		~~~~~ ~~~~~ ~~~~~ ~~~~~
		1. 2. 3. 4.

Note 1. First field Manufacturer's name

2. Second field Model name

3. Third field Serial number

4. Fourth field Software version

#### 4-3-2. HIOKI 84series OPT.vi

Queries device option provision.

**HIOKI 84series OPT.vi**

Name	Data type	Explanation
Option	[abc]	The result of querying the device option provision *

* 8423 (return unit kind for each unit)

0=not present

1= 8948 Voltage/Temp Unit

2= 8996 Digital/Pulse Unit

3= 8949 Universal Unit

4= 8997 Alarm Unit

*LR8400,LR8401,LR8402 (return unit kind for each unit)

0=not present

1= LR8500 Voltage/Temp Unit

2= LR8501 Universal Unit

*LR8410,LR8416 (return unit kind for each unit)

0=not present

1= LR8510 Wireless Voltage/Temp Unit

2= LR8511 Wireless Universal Unit

3= LR8512 Wireless Pulse Logger

4= LR8513 Wireless Clamp Logger

5= LR8514 Wireless Humidity Logger

6= LR8515 Wireless Voltage/Temp Logger

7= LR8520 Wireless Fungal Logger

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 20
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the 8423 command.)

(2) *OPT? --- Queries device option provision.

Syntax (query) *OPT?  
 (response) A1,A2,A3,A4,A5,A6,A7,A8<NR1>(8423) A=0 to 4  
 0=not present  
 1= 8948 Voltage/Temp Unit  
 2= 8996 Digital/Pulse Unit  
 3= 8949 Universal Unit  
 4= 8997 Alarm Unit

Explanation Whether or not input channel present is returned as an NR1 numerical value.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) *OPT? --- Queries device option provision.

Syntax (query) *OPT?  
 (response) A1,A2,A3,A4,A5,A6,A7<NR1> A=0 to 2  
 0=not present  
 1= LR8500 Voltage/Temp Unit  
 2= LR8501 Universal Unit

Explanation Whether or not input channel present is returned as an NR1 numerical value.

Reference command (the LR8410,LR8416 command.)

(2) *OPT? --- Queries device option provision.

Syntax (query) *OPT?  
 (response) A1,A2,A3,A4,A5,A6,A7<NR1> A=0 to 7  
 0=not present  
 1= LR8510 Wireless Voltage/Temp Unit  
 2= LR8511 Wireless Universal Unit  
 3= LR8512 Wireless Pulse Logger  
 4= LR8513 Wireless Clamp Logger  
 5= LR8514 Wireless Humidity Logger  
 6= LR8515 Wireless Voltage/Temp Logger  
 7= LR8520 Wireless Fungal Logger

Explanation Whether or not input channel present is returned as an NR1 numerical value.

#### 4-3-3. HIOKI 84series Reset.vi

Initializes the unit.

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

#### Reference command (the 8423 command.)

##### (1) *RST --- Device initial setting.

Syntax (command) *RST

Explanation Initializes the unit (same as system reset).

Note It does not clear USB,LAN related items.  
(the event registers, the enable registers, the input buffer and the output queue)  
Time is required to the end of a *RST command.  
Please send the next command after wait for the completion  
of an initialization and send *OPC? after *RST, in the case  
that you want to send the next command.

#### Reference command (the LR8400,LR8401,LR8402 command.)

##### (1) *RST --- Device initial setting.

Syntax (command) *RST

Explanation Initializes the unit (same as system reset).

Note It does not clear USB,LAN related items.  
(the event registers, the enable registers, the input buffer and the output queue)  
Time is required to the end of a *RST command.  
Please send the next command after wait for the completion  
of an initialization and send *OPC? after *RST, in the case  
that you want to send the next command.

#### Reference command (the LR8410,LR8416 command.)

##### (1) *RST --- Device initial setting.

Syntax (command) *RST

#### 4-3-4. HIOKI 84series TST.vi

Queries the result of ROM/RAM check.

Name	Data type	Explanation
Answer	<b>I32</b>	<p>The result of ROM/RAM check.</p> <p>Output:</p> <p>0: normal</p> <p>1: failure</p>

Reference command (the 8423 command.)

(2) *TST? --- Queries the result of the ROM/RAM check.

Syntax      (query)      *TST?  
               (response)     A <NR1>  
                             A = 0, 1  
                             0: normal  
                             1: failure

Explanation    The result of the ROM/RAM check of the unit is returned  
                   as an NR1 numerical value.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) *TST? --- Queries the result of the ROM/RAM check.

Syntax      (query)      *TST?  
               (response)     A <NR1>  
                             A = 0, 1  
                             0: normal  
                             1: failure

Explanation    The result of the ROM/RAM check of the unit is returned  
                   as an NR1 numerical value.

Reference command (the LR8410,LR8416 command.)

(2) *TST? --- Queries the result of the ROM/RAM check.

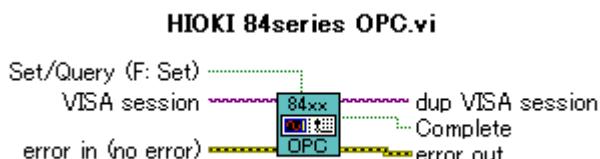

Syntax      (query)      *TST?  
               (response)     A <NR1>  
                             A = 0, 1  
                             0: normal  
                             1: failure

Explanation    The result of the ROM/RAM check of the unit is returned  
                   as an NR1 numerical value.

#### 4-3-5. HIOKI 84series OPC.vi

Replies with ASCII[1] after execution is completed.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function. Valid range; False(=set: Default), True(=Query)
Complete	[TF]	The result of querying Output range: False(=All action has not been completed during execution, or, error) True(=All action has not been completed during execution)

#### Reference command (the 8423 command.)

(1) *OPC --- After all action has been completed during execution, sets the LSB (bit 0) of SESR (the standard event status register).

Syntax (command) *OPC

Explanation When the command preceding the *OPC command completes execution, the LSB of SESR is set.

Example A\$;B\$;*OPC;C\$

(After the execution of the commands A\$ and B\$ is completed, the LSB of SESR is set.)

(2) *OPC? --- After execution is completed, replies with ASCII [1].

Syntax (query) *OPC?

(response) 1

Explanation When the command preceding the *OPC command completes execution, the response of ASCII [1] is made.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 24
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(1) *OPC --- After all action has been completed during execution, sets the LSB (bit 0) of SESR (the standard event status register).

Syntax (command) *OPC

Explanation When the command preceding the *OPC command completes execution, the LSB of SESR is set.

Example A\$;B\$;*OPC;C\$

(After the execution of the commands A\$ and B\$ is completed, the LSB of SESR is set.)

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

(2) *OPC? --- After execution is completed, replies with ASCII [1].

Syntax (query) *OPC?

(response) 1

Explanation When the command preceding the *OPC command completes execution, the response of ASCII [1] is made.

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

Reference command (the LR8410,LR8416 command.)

(1) *OPC --- After all action has been completed during execution, sets the LSB (bit 0) of SESR (the standard event status register).

Syntax (command) *OPC

Explanation When the command preceding the *OPC command completes execution, the LSB of SESR is set.

Example A\$;B\$;*OPC;C\$

(After the execution of the commands A\$ and B\$ is completed, the LSB of SESR is set.)

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

(2) *OPC? --- After execution is completed, replies with ASCII [1].

Syntax (query) *OPC?

(response) 1

Explanation When the command preceding the *OPC command completes execution, the response of ASCII [1] is made.

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

#### 4-3-6. HIOKI 84series WAI.vi

After the execution of the command is completed, subsequently performs the following command.

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

#### Reference command (the 8423 command.)

(3) *WAI --- After the execution of the command is completed, subsequently performs the following command.

Syntax (command) *WAI

Example A\$;B\$;*WAI;C\$

The command C\$ following *WAI is not executed until the execution of the commands A\$ and B\$ is completed.

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

#### Reference command (the LR8400,LR8401,LR8402 command.)

(3) *WAI --- After the execution of the command is completed, subsequently performs the following command.

Syntax (command) *WAI

Example A\$;B\$;*WAI;C\$

The command C\$ following *WAI is not executed until the execution of the commands A\$ and B\$ is completed.

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

#### Reference command (the LR8410,LR8416 command.)

(3) *WAI --- After the execution of the command is completed, subsequently performs the following command.

Syntax (command) *WAI

Example A\$;B\$;*WAI;C\$

The command C\$ following *WAI is not executed until the execution of the commands A\$ and B\$ is completed.

Note Please do not use it for the watch of the start processing when the record time continuousness is turning on.

#### 4-3-7. HIOKI 84series CLS.vi

Clears the status bytes and associated queues(except for the output queue).

**HIOKI 84series CLS.vi**

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

Reference command (the 8423 command.)

- (1) *CLS --- Clears the status byte and associated queues  
(except for the output queue).

Syntax (command) *CLS

Explanation This instruction clears the event register associated with each bit of the status byte register.

It also clears the status byte register.

Note Because it does not clear the output queue, it has no effect upon bit 4 (MAV) of the status byte.

Reference command (the LR8400,LR8401,LR8402 command.)

- (1) *CLS --- Clears the status byte and associated queues  
(except for the output queue).

Syntax (command) *CLS

Explanation This instruction clears the event register associated with each bit of the status byte register.

It also clears the status byte register.

Note Because it does not clear the output queue, it has no effect upon bit 4 (MAV) of the status byte.

Reference command (the LR8410,LR8416 command.)

- (1) *CLS --- Clears the status byte and associated queues  
(except for the output queue).

Syntax (command) *CLS

Explanation This instruction clears the event register associated with each bit of the status byte register.

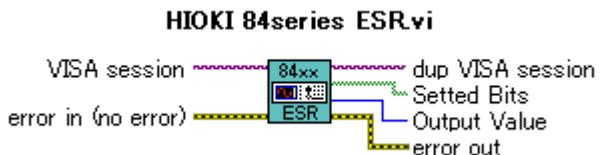

It also clears the status byte register.

Note Because it does not clear the output queue, it has no effect upon bit 4 (MAV) of the status byte.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 27
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-8. HIOKI 84series ESR.vi

Reads out and clears the contents of the standard event status register(SESR)

Name	Data type	Explanation
Setted Bits	[TF]	The result(bit array) of querying the SESR Output range: False(=0) True(=1)
Output Value	[132]	The result(value) of querying the SESR Output range: 0 – 255

#### Reference command (the 8423 command.)

(2) *ESR? --- Reads out and clears the contents of the standard event status register (SESR).

Syntax      (query)      *ESR?  
              (response)     A <NR1>

Explanation    The contents of SESR are returned as an NR1 numerical value.

#### Reference command (the LR8400,LR8401,LR8402 command.)

(2) *ESR? --- Reads out and clears the contents of the standard event status register (SESR).

Syntax      (query)      *ESR?  
              (response)     A <NR1>

Explanation    The contents of SESR are returned as an NR1 numerical value.

#### Reference command (the LR8410,LR8416 command.)

(2) *ESR? --- Reads out and clears the contents of the standard event status register (SESR).

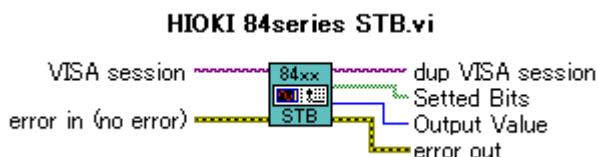

Syntax      (query)      *ESR?  
              (response)     A <NR1>

Explanation    The contents of SESR are returned as an NR1 numerical value.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 28
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-9. HIOKI 84series STB.vi

Reads the status byte and MSS bit, without performing serial polling.

Name	Data type	Explanation
Settled Bits	[TF]	The result(bit array) of querying the status byte and MSS Output range: False(=0) True(=1)
Output Value	[I32]	The result(value) of querying the status byte and MSS Output range: 0 – 255

Reference command (the 8423 command.)

(3) *STB? --- Reads the status byte and MSS bit, without performing serial polling.

Syntax      (query)      *STB?  
               (response)     A <NR1>  
                             A = 0 to 255

Explanation    This is the same as reading out the status byte with  
serial polling.

Note           Bit 6 is not RQS, but is MSS.

Reference command (the LR8400,LR8401,LR8402 command.)

(3) *STB? --- Reads the status byte and MSS bit.

Syntax      (query)      *STB?  
               (response)     A <NR1>  
                             A = 0 to 255

Explanation    This is the same as reading out the status byte.

Note           Bit 6 is not RQS, but is MSS.

Reference command (the LR8410,LR8416 command.)

(3) *STB? --- Reads the status byte and MSS bit.

Syntax      (query)      *STB?  
               (response)     A <NR1>  
                             A = 0 to 255

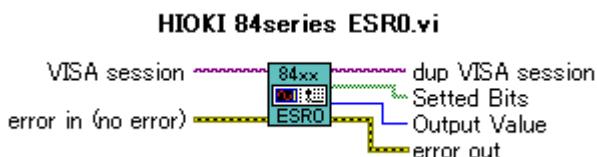

Explanation    This is the same as reading out the status byte.

Note           Bit 6 is not RQS, but is MSS.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 29
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-10. HIOKI 84series ESR0.vi

Reads event status register 0 (ESR0).

Name	Data type	Explanation
Setted Bits	[TF]	The result(bit array) of querying the ESR0 Output range: False(=0) True(=1)
Output Value	I32	The result(value) of querying the ESR0 Output range: 0 – 255

Reference command (the 8423 command.)

(4) :ESR0? --- Reads event status register 0 (ESR0).

Syntax (query) :ESR0?  
(response) A <NR1>  
A = 0 to 255

Explanation The contents of ESR0 are returned as an NR1 numerical value, and ESR0 is cleared.

Reference command (the LR8400,LR8401,LR8402 command.)

(4) :ESR0? --- Reads event status register 0 (ESR0).

Syntax (query) :ESR0?  
(response) A <NR1>  
A = 0 to 255

Explanation The contents of ESR0 are returned as an NR1 numerical value, and ESR0 is cleared.

Reference command (the LR8410,LR8416 command.)

(4) :ESR0? --- Reads event status register 0 (ESR0).

Syntax (query) :ESR0?  
(response) A <NR1>  
A = 0 to 255

Explanation The contents of ESR0 are returned as an NR1 numerical value, and ESR0 is cleared.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 30

#### 4-3-12. HIOKI 84series Stop.vi

Performs stopping. (Same as the STOP key of the unit)

##### HIOKI 84series Stop.vi

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

#### Reference command (the 8423 command.)

##### (2) Performs stopping.

Syntax (command) :STOP

Explanation STOP waveform sampling.

Note Terminates at the instant that waveform sampling operation is completed.

Note :STOP command after it did the measurement for record time, when record time is except for a continuation, when you implement it 1 time it stops. It does not stop at the time of a continuation.:STOP command it stops when record time was implemented 2nd :STOP at the time of except for a continuation and also continuation, when you implement it twice.

#### Reference command (the LR8400,LR8401,LR8402 command.)

##### (2) Performs stopping.

Syntax (command) :STOP

Explanation STOP waveform sampling.

Note Terminates at the instant that waveform sampling operation is completed.

Note :STOP command after it did the measurement for record time, when record time is except for a continuation, when you implement it 1 time it stops. It does not stop at the time of a continuation.:STOP command it stops when record time was implemented 2nd :STOP at the time of except for a continuation and also continuation, when you implement it twice.

#### Reference command (the LR8410,LR8416 command.)

##### (2) Performs stopping.

Syntax (command) :STOP

Explanation STOP waveform sampling.

Note Terminates at the instant that waveform sampling operation is completed.

Note :STOP command after it did the measurement for record time, when record time is except for a continuation, when you implement it 1 time it stops. It does not stop at the time of a continuation.:STOP command it stops when record time was implemented 2nd :STOP at the time of except for a continuation and also continuation, when you implement it twice.

4-3-13. HIOKI 84series Abort.vi

Aborts processing.

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

Reference command (the 8423 command.)

(3) Aborts processing.

Syntax (command) :ABORT

Explanation Force STOP waveform sampling. Terminates even if waveform sampling operation is not yet completed.

Note :ABORT command transmission after, please do so that you send the next command, after you wait for more than 0.2 seconds.

Reference command (the LR8400,LR8401,LR8402 command.)

(3) Aborts processing.

Syntax (command) :ABORT

Explanation Force STOP waveform sampling. Terminates even if waveform sampling operation is not yet completed.

Note :ABORT command transmission after, please do so that you send the next command, after you wait for more than 0.2 seconds.

Reference command (the LR8410,LR8416 command.)

(3) Aborts processing.

Syntax (command) :ABORT

Explanation Force STOP waveform sampling. Terminates even if waveform sampling operation is not yet completed.

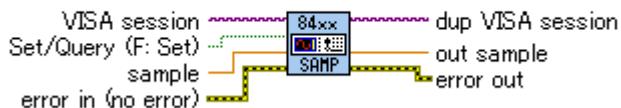

Note :ABORT command transmission after, please do so that you send the next command, after you wait for more than 0.2 seconds.

#### 4-3-14. HIOKI 84series Conf Sample.vi

Changes or queries the recording interval .

**HIOKI 84series Conf Sample.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function. Valid range; False(=set: Default), True(=Query)
sample set	[DBL]	Sets the numerical value of the recording interval
sample	[DBL]	The result of querying the recording interval

Reference command (the 8423 command.)

(3) Sets and queries the recording interval (fast).

Syntax      (command)    :CONFigure:SAMPLE A  
               (query)     :CONFigure:SAMPLE?

              (response)   A<NR3>

Explanation   Sets the recording interval (fast) to a numerical value (unit seconds).

Returns the currently set value of the recording interval (fast)  
               as an NR3 numerical value.

(If an attempt is made to set the time axis range to  
               a non-permitted value, and there is a range above that  
               value, that range will be selected.)

(10ms=0.01, 20ms=0.02, 50ms=0.05

100ms=0.1, 200ms=0.2, 500ms=0.5

1s=1, 2s=2, 5s=5

10s=10, 20s=20, 30s=30

1min=60, 2min=120, 5min=300

10min=600, 20min=1200, 30min=1800

1h=3600)

Example      :CONFigure:SAMPLE +100.0E-3

Sets the recording interval (fast) to 100ms.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 34
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(1) Sets and queries the recording interval.

Syntax (command) :CONFIGURE:SAMPLE A  
(query) :CONFIGURE:SAMPLE?  
(response) A<NR3>

Explanation Sets the recording interval to a numerical value (unit seconds). Returns the currently set value of the recording interval as an NR3 numerical value.  
(If an attempt is made to set the time axis range to a non-permitted value, and there is a range above that value, that range will be selected.)

(10ms=0.01, 20ms=0.02, 50ms=0.05  
100ms=0.1, 200ms=0.2, 500ms=0.5  
1s=1, 2s=2, 5s=5, 10s=10, 20s=20, 30s=30  
1min=60, 2min=120, 5min=300  
10min=600, 20min=1200, 30min=1800, 1h=3600)

Example :CONFIGURE:SAMPLE +100.0E-3

Sets the recording interval to 100ms.

Note When either of CH2_1 to CH2_15 is turning on, the recording interval cannot be set to 10ms.

When either of CH3_1 to CH4_15 is turning on, the recording interval cannot be set to 10ms and 20ms.  
When disconnection detection is ON, and either of CH2_1 to CH2_15 is turning on, and the recording interval are set to 20ms, disconnection detection is changed to turning off.

When disconnection detection is ON, and either of CH3_1 to CH4_15 is turning on, and the recording interval are set to 50ms, disconnection detection is changed to turning off.

Note The setting of time axis, recording time, pre-trigger, auto save, division time, and calculation division time might be limited by a set value of interval.

Reference command (the LR8410,LR8416 command.)

(1) Sets and queries the recording interval.

Syntax (command) :CONFIGURE:SAMPLE A  
(query) :CONFIGURE:SAMPLE?  
(response) A<NR3>

Explanation Sets the recording interval to a numerical value (unit seconds). Returns the currently set value of the recording interval as an NR3 numerical value.

(If an attempt is made to set the time axis range to a non-permitted value, and there is a range above that value, that range will be selected.)

(100ms=0.1, 200ms=0.2, 500ms=0.5  
1s=1, 2s=2, 5s=5, 10s=10, 20s=20, 30s=30  
1min=60, 2min=120, 5min=300  
10min=600, 20min=1200, 30min=1800, 1h=3600)

Example :CONFIGURE:SAMPLE +100.0E-3

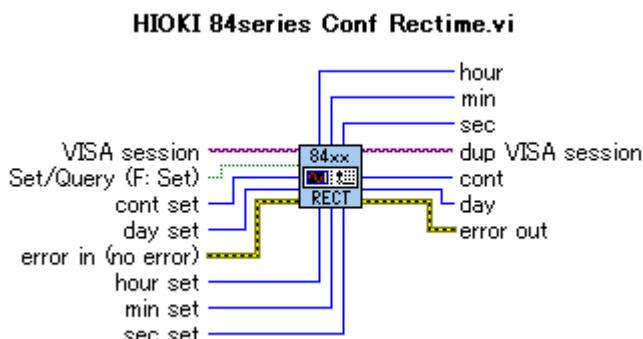

Sets the recording interval to 100ms.

Note The setting of time axis, recording time, pre-trigger, auto save, division time, and calculation division time might be limited by a set value of interval.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 35
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-15. HIOKI 84series Conf Rectime.vi

Sets or queries the recording time.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function. Valid range; False(=set: Default), True(=Query)
Day set	[U32]	Sets the numerical value of the recording day
Hour set	[U32]	Sets the numerical value of the recording hour
Min set	[U32]	Sets the numerical value of the recording min
Sec set	[U32]	Sets the numerical value of the recording sec
Day	[U32]	The result of querying the numerical value of the recording day
Hour	[U32]	The result of querying the numerical value of the recording hour
Min	[U32]	The result of querying the numerical value of the recording min
sec	[U32]	The result of querying the numerical value of the recording sec

#### Reference command (the 8423 command.)

##### (2) Sets and queries the recording time

Syntax	(command)	:CONFigure:RECTime A,B,C,D
	(query)	:CONFigure:RECTime?
	(response)	A,B,C,D A=day :0 to 999(day) B=hour:0 to 23(hour) C=min :0 to 59(min) D=sec :0 to 59(sec) day,hour,min,sec<NR1> 0,0,0,0=cont

Explanation	Sets the recording time to a numerical value. Returns the currently set value of the recording time as an NR1 numerical value.
Example	:CONFigure:RECTime 0,0,0,10 Sets the recording time to 10sec.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 36
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(3) Sets and queries the recording time

Syntax (command) :CONFIGURE:RECTIME A,B,C,D  
 (query) :CONFIGURE:RECTIME?  
 (response) A,B,C,D  
     A=day :0 to 500(day)  
     B=hour:0 to 23(hour)  
     C=min :0 to 59(min)  
     D=sec :0 to 59(sec)  
     day,hour,min,sec<NR1>  
     0,0,0,0=cont

Explanation Sets the recording time to a numerical value.  
 Returns the currently set value of the recording time as an NR1 numerical value.

Example :CONFIGURE:RECTIME 0,0,0,10  
 Sets the recording time to 10sec.

Note The setting of recording time be limited by a set value of interval.

Note The setting of recording time might be limited by a set value of interval.

Reference command (the LR8410,LR8416 command.)

(3) Sets and queries the recording time

Syntax (command) :CONFIGURE:RECTIME A,B,C,D  
 (query) :CONFIGURE:RECTIME?  
 (response) A,B,C,D  
     A=day :0 to 500(day)  
     B=hour:0 to 23(hour)  
     C=min :0 to 59(min)  
     D=sec :0 to 59(sec)  
     day,hour,min,sec<NR1>  
     0,0,0,0=cont

Explanation Sets the recording time to a numerical value.  
 Returns the currently set value of the recording time as an NR1 numerical value.

Example :CONFIGURE:RECTIME 0,0,0,10  
 Sets the recording time to 10sec.

Note The setting of recording time be limited by a set value of interval.

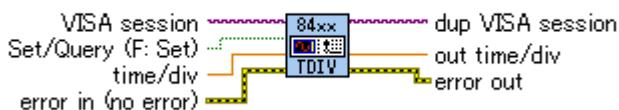

Note The setting of recording time might be limited by a set value of interval.

#### 4-3-16. HIOKI 84series Conf Tdiv.vi

Sets or queries the time axis range.

**HIOKI 84series Conf Tdiv.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function. Valid range; False(=set: Default), True(=Query)
time/div	DBL	Sets the numerical value of the axis range (unit: s) *
out time/div	DBL	The result of querying the time axis range (unit: s)

* If an attempt is made to set the time axis range to a non-permitted value, and there is a range above that value, that range will be selected.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) Sets and queries the time axis range

Syntax      (command) :CONFIGURE:TDIV A  
               (query)    :CONFIGURE:TDIV?  
               (response) A<NR3>

Explanation   Sets the time axis range to a numerical value (unit seconds).

Returns the currently set value of the time axis range as an NR3 numerical value.

(If an attempt is made to set the time axis range to a non-permitted value, and there is a range above that value, that range will be selected.)

(Time axis range is possible only bigger setting than a recording interval.)

(100ms=0.1, 200ms=0.2, 500ms=0.5

1s=1, 2s=2, 5s=5

10s=10, 20s=20, 30s=30

1min=60, 2min=120, 5min=300

10min=600, 20min=1200, 30min=1800

1h=3600, 2h=7200, 5h=18000

10h=36000, 12h=43200, 1d=86400)

:CONFIGURE:TDIV +1.0E+0

Sets the time axis range to 1s.

Note      The setting of time axis might be limited by a set value of interval.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 38
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(2) Sets and queries the time axis range

Syntax (command) :CONFigure:TDIV A  
 (query) :CONFigure:TDIV?  
 (response) A<NR3>

Explanation Sets the time axis range to a numerical value (unit seconds).

Returns the currently set value of the time axis range as an NR3 numerical value.

(If an attempt is made to set the time axis range to a non-permitted value, and there is a range above that value, that range will be selected.)

(Time axis range is possible only bigger setting than a recording interval.)

(200ms=0.2, 500ms=0.5

1s=1, 2s=2, 5s=5

10s=10, 20s=20, 30s=30

1min=60, 2min=120, 5min=300

10min=600, 20min=1200, 30min=1800

1h=3600, 2h=7200, 5h=18000

10h=36000, 12h=43200, 1d=86400)

Example :CONFigure:TDIV +1.0E+0

Sets the time axis range to 1s.

Note

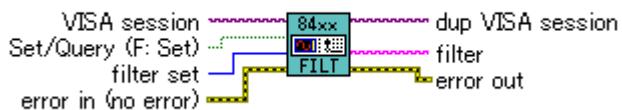

The setting of time axis might be limited by a set value of interval.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 39

#### 4-3-17. HIOKI 84series Unit Filter.vi

Sets or queries input channel filter.

**HIOKI 84series Unit Filter.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
Filter set	[↔]	Specifies the input channel filter Valid range: 0 (=OFF: Default), 1 (=ON)
filter	[abc]	The result of querying the input channel filter

Reference command (the 8423 command.)

(3) Sets and queries the input channel filter (fast).

Syntax      (command)    :UNIT:FILTter A\$  
               (query)     :UNIT:FILTter?  
               (response)   A\$  
                           A\$=OFF,50HZ,60HZ

Explanation   Sets the input channel filter (fast).  
                  Returns the input channel filter (fast) as character data.

Example      :UNIT:FILTter 50HZ  
                  Sets the input channel filter (fast) to 50HZ.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) Sets and queries the input channel filter.

Syntax      (command)    :UNIT:FILTter A\$  
               (query)     :UNIT:FILTter?  
               (response)   A\$  
                           A\$=OFF,50HZ,60HZ

Explanation   Sets the input channel filter.  
                  Returns the input channel filter as character data.

Example      :UNIT:FILTter 50HZ  
                  Sets the input channel filter to 50HZ.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 40
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(2) Sets and queries the input channel filter.

Syntax (command) :UNIT:FILTER A\$  
(query) :UNIT:FILTER?  
(response) A\$

A\$=OFF,50HZ,60HZ

Explanation Sets the input channel filter.

Returns the input channel filter as character data.

Example :UNIT:FILTER 50HZ

Sets the input channel filter to 50HZ.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>41</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-18. HIOKI 84series Unit Wire.vi

Sets or queries input disconnection detection for tc mode.

**HIOKI 84series Unit Wire.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
Wire set	[number]	Specifies the disconnection detection for tc mode Valid range: 0 (=OFF: Default), 1 (=ON)
wire	[abc]	The result of querying the disconnection detection for tc mode

*LR8400,LR8401,LR8402

When the recording interval is 10ms, disconnection detection cannot turn on.

When the recording interval is 20ms, and either of CH2_1 to CH2_15 is turned on,  
disconnection detection cannot turn on.

When the recording interval is 50ms, and either of CH3_1 to CH4_15 is turned on,  
disconnection detection cannot turn on.

*LR8410

When the recording interval is 100ms, disconnection detection cannot turn on.

Reference command (the LR8400,LR8401,LR8402 command.)

(8) Sets and queries the disconnection detection for tc mode.

Syntax (command) :UNIT:WIRE A\$  
(query) :UNIT:WIRE?  
(response) A\$  
A\$=OFF,ON

Explanation Sets the disconnection detection.

Returns the current disconnection detection as character data.

Example :UNIT:WIRE ON

Sets the point of contact compensation to on.

Note When the recording interval is 10ms, disconnection detection cannot turn on.  
on,

When the recording interval is 20ms, and either of CH2_1 to CH2_15 is turned on,  
disconnection detection cannot turn on.

on,  
When the recording interval is 50ms, and either of CH3_1 to CH4_15 is turned on,  
disconnection detection cannot turn on.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 42
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(8) Sets and queries the disconnection detection for tc mode.

Syntax (command) :UNIT:WIRE A\$  
 (query) :UNIT:WIRE?  
 (response) A\$  
 A\$=OFF,ON

Explanation Sets the disconnection detection.

Returns the current disconnection detection as character data.

Example :UNIT:WIRE ON

Sets the disconnection detection to on.

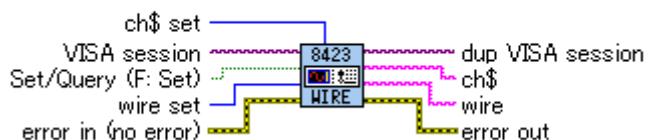

Note When the recording interval is 100ms, disconnection detection cannot turning on.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 43
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-19. HIOKI 84series Unit Wire_8423.vi

Sets or queries input disconnection detection for tc mode.

HIOKI 84series Unit Wire 8423.vi

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Wire set		Specifies the disconnection detection for tc mode Valid range: 0 (=OFF: Default), 1 (=ON)
ch\$		Specified channel
wire		The result of querying the disconnection detection for tc mode

### Reference command (the 8423 command.)

(9) Sets and queries the disconnection detection for tc mode.

Syntax	(command)	:UNIT:WIRE unit\$,ch\$,A\$
	(query)	:UNIT:WIRE? unit\$,ch\$
	(response)	unit\$,ch\$,A\$
		unit\$=UNIT1 to UNIT8
		ch\$=CH1 to CH15
		A\$=OFF,ON

**Explanation** Sets the disconnection detection for the channel designated by unit\$ ch\$.

Returns the current disconnection detection for the channel designated by unit\$ ch\$ as character data.

Example :UNIT:WIRE U

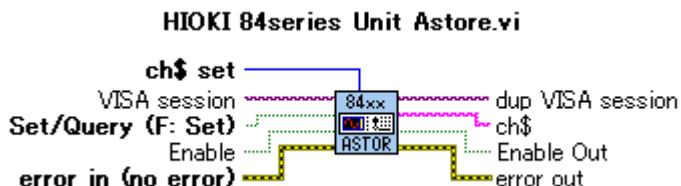

Sets the point of contact compensation for unit 1,channel 1 to on.

**Note** This command is effective only when 8949 Universal Unit or 8948 Voltage/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>44</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-20. HIOKI 84series Unit Astore.vi

Sets or queries the store enable or disable for channel data record.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
store set	[<>]	Specifies the store enable or disable for channel data record
ch\$	[abc]	Specified channel
store	[abc]	The result of querying the store enable or disable for channel data record

- * When recording interval is 10ms and either of CH2_1 to CH2_15 is turning on, the recording interval change to 20ms.
- When recording interval is 10ms,20ms and either of CH3_1 to CH4_15 is turning on, the recording interval change to 50ms.
- When disconnection detection is ON, and the recording interval is 20ms, and either of CH2_1 to CH2_15 is turning on, disconnection detection is changed to turning off.
- When disconnection detection is ON, and the recording interval is 50ms, and either of CH3_1 to CH4_15 is turning on, disconnection detection is changed to turning off.

#### Reference command (the LR8400,LR8401,LR8402 command.)

- (1) Sets and queries the store enable or disable for channel data record.

Syntax	(command) :UNIT:STORe ch\$,A\$
	(query) :UNIT:STORe? ch\$
	(response) ch\$,A\$
	ch\$=CH1_1 to CH4_15, PLS1 to PLS8,LOG,ALARM,W1 to W30
	A\$=OFF,ON

Explanation Sets the store enable or disable for the channel designated by ch\$. Returns the current store enable or disable for the channel designated by ch\$ as character data.

Example :UNITSTORe CH1_1,ON  
Sets the store for channel 1-1 to enable.

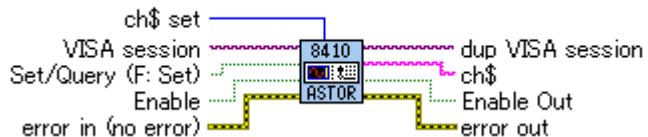

Note CH1_1 to CH4_15 is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>45</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-21. HIOKI 84series Unit Astore_LR8410.vi

Sets or queries the store enable or disable for channel data record.

**HIOKI 84series Unit Astore_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
store set	[<>]	Specifies the store enable or disable for channel data record
ch\$	[abc]	Specified channel
store	[abc]	The result of querying the store enable or disable for channel data record

Reference command (the LR8410,LR8416 command.)

(1) Sets and queries the store enable or disable for channel data record.

Syntax (command) :UNIT:STORe ch\$,A\$  
(query) :UNIT:STORe? ch\$  
(response) ch\$,A\$  
ch\$=CH1_1 to CH7_15,~~ALARM,W1 to W30~~  
A\$=OFF,ON

Explanation Sets the store enable or disable for the channel designated by ch\$.

Returns the current store enable or disable for the channel designated by ch\$ as character data.

Example :UNIT:STORe CH1_1,ON

Sets the store for channel 1-1 to enable.

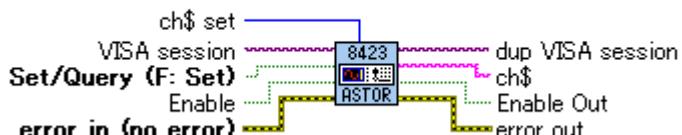

Note CH1_1 to CH7_15 is effective only when LR8511 Wireless Universal Unit or LR8510 Wireless Volt/Temp Unit's registered or LR8512 Wireless Pulse Logger or LR8513 Wireless Clamp Logger or LR8514 Wireless Humidity Logger or LR8515 Wireless Voltage/Temp Logger or LR8520 Wireless Fungal Logger's registered channel..

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>46</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-22. HIOKI 84series Unit Astore_8423.vi

Sets or queries the store enable or disable for channel data record.

**HIOKI 84series Unit Astore_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
store set	[<>]	Specifies the store enable or disable for channel data record
ch\$	[abc]	Specified channel
store	[abc]	The result of querying the store enable or disable for channel data record

Reference command (the 8423 command.)

- (1) Sets and queries the store enable or disable for channel data record.

Syntax      (command)    :UNIT:STORe unit\$,ch\$,A\$  
               (query)     :UNIT:STORe? unit\$,ch\$  
               (response)   unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=OFF,ON

Explanation   Sets the store enable or disable for the channel designated by unit\$,ch\$.

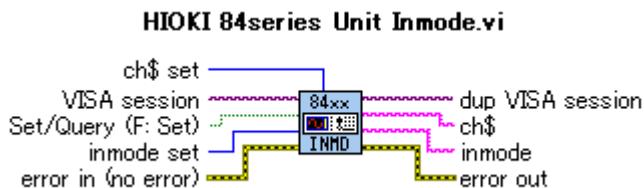

Returns the current store enable or disable for the channel designated by unit\$,ch\$ as character data.

Example      :UNITSTORe UNIT,CH1,ON  
                  Sets the store for UNIT 1 channel 1 to enable.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>47</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-23. HIOKI 84series Unit Inmode.vi

Sets or queries the measurement mode of an input channel.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Mode set	[<>]	Specifies the measurement mode of an input channel Valid range: 0(=VOLTAGE),1(=TC),2(=RTD),3(=HUMIDITY),4(=RESIST) *
ch\$	[abc]	Specified channel
mode	[abc]	The result of querying the measurement mode of an input channel

* RTD,RESIST is only LR8501 universal unit

Reference command (the LR8400,LR8401,LR8402 command.)

#### (3) Sets and queries the measurement mode of an input channel.

Syntax      (command) :UNIT:INM0de ch\$,A\$  
               (query) :UNIT:INM0de? ch\$  
               (response) ch\$,A\$  
                   ch\$=CH1_1 to CH4_15  
                   A\$=VOLTAGE,TC,RTD,HUMIDITY,RESIST

Explanation      Sets the measurement mode for the channel designated by ch\$.  
                   Returns the current measurement mode for the channel designated by ch\$ as character data.

Example      :UNIT:INM0de CH1_1,VOLTAGE  
                   Sets the measurement mode for unit 1,channel 1 to voltage.

Note      RTD,RESIST is only LR8501 universal unit

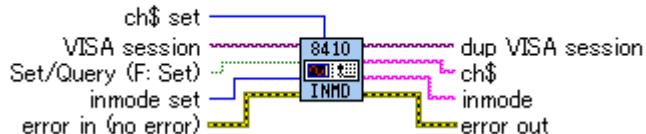

Note      This command is effective only when LR8501 Universal Unit  
                   or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 48

#### 4-3-24. HIOKI 84series Unit Inmode_LR8410.vi

Sets or queries the measurement mode of an input channel.

**HIOKI 84series Unit Inmode_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Mode set	[DIP]	Specifies the measurement mode of an input channel Valid range: 0(=VOLTAGE),1(=TC),2(=RTD),3(=HUMIDITY),4(=RESIST) 5(=COUNT),6(=REVOLVE),7(=LOGIC),8(=CURRENT), 9(=TEMP),10(=FINDEX),11(=FGROWTH) *
ch\$	[abc]	Specified channel
mode	[abc]	The result of querying the measurement mode of an input channel

* The input kind which can be established depends on the wireless unit and wireless logger

Reference command (the LR8410 command.)

(3) Sets and queries the measurement mode of an input channel.

Syntax	(command) :UNIT:INM0de ch\$,A\$ (query) :UNIT:INM0de? ch\$ (response) ch\$,A\$ ch\$=CH1_1 to CH7_15 A\$=VOLTAGE,TC,RTD,HUMIDITY,RESIST, <del>HEAT</del> , COUNT,REVOLVE,LOGIC,CURRENT,TEMP,FINDEX,FGROWTH (HEAT is only for LR8416)
--------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Explanation	Sets the measurement mode for the channel designated by ch\$. Returns the current measurement mode for the channel designated by ch\$ as character data.
-------------	----------------------------------------------------------------------------------------------------------------------------------------------------------

Example	:UNIT:INM0de CH1_1,VOLTAGE Sets the measurement mode for unit 1,channel 1 to voltage.
---------	------------------------------------------------------------------------------------------

#### 4-3-26. HIOKI 84series Unit Inmode_8423.vi

Sets or queries the measurement mode of an input channel.

**HIOKI 84series Unit Inmode_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Mode set	[<>]	Specifies the measurement mode of an input channel Valid range: 0(=VOLTAGE),1(=TC),2(=RTD),3(=HUMIDITY) *
ch\$	[abc]	Specified channel
mode	[abc]	The result of querying the measurement mode of an input channel

* RTD,HUMIDITY is only 8949 universal unit

Reference command (the 8423 command.)

(5) Sets and queries the measurement mode of an input channel.

Syntax	(command) :UNIT:INM0de unit\$,ch\$,A\$
	(query) :UNIT:INM0de? unit\$,ch\$
	(response) unit\$,ch\$,A\$
	unit\$=UNIT1 to UNIT8
	ch\$=CH1 to CH15
	A\$=VOLTAGE,TC,RTD,HUMIDITY

Explanation Sets the measurement mode for the channel designated by unit\$,ch\$. Returns the current measurement mode for the channel designated by unit\$,ch\$ as character data.

Example :UNIT:INM0de UNIT1,CH1,VOLTAGE

Sets the measurement mode for unit 1,channel 1 to voltage.

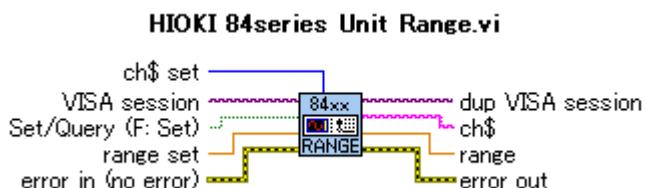

Note RTD,HUMIDITY is only 8949 universal unit

Note This command is effective only when 8949 Universal Unit  
or 8948 Voltage/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 53
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-27. HIOKI 84series Unit Range.vi

Sets or queries the measurement range of an input channel.

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
range set	DBL	Specifies the measurement range (unit: V, °C) *
ch\$	abc	Specified channel
range	DBL	The result of querying the measurement range (unit: V, °C)

* Temperature range cannot be set to 100 or 500 at Sensor is B.

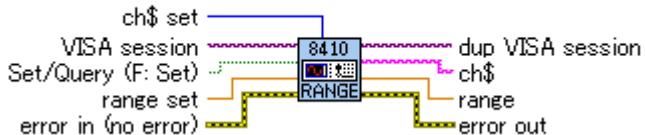

Reference command	(the LR8400,LR8401,LR8402 command.)
(4) Sets and queries the measurement range of an input channel.	
Syntax	(command) :UNIT:RANGE ch\$,A (query) :UNIT:RANGE? ch\$ (response) ch\$,A<NR3> ch\$=CH1_1 to CH4_15 A=volt(V),tc,rtd(C),humid(%),resist(OHM)
Explanation	Sets the measurement range for the channel designated by ch\$ to a numerical value. Returns the current measurement range for the channel designated by ch\$ as an NR3 numerical value.
Example	:UNIT:RANGE CH1_1,+100.E-3 Sets the measurement range for channel 1-1 to 100 mV.
Note	Please set up A=15, when it makes the range of 1-5V with voltage.
Note	This command is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit. Temperature range cannot be set to 100 or 500 at Sensor is B.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 54
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-28. HIOKI 84series Unit Range_LR8410.vi

Sets or queries the measurement range of an input channel.

**HIOKI 84series Unit Range_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
range set		Specifies the measurement range (unit: V、°C、%、Ω、c、r/s) *
ch\$		Specified channel
range		The result of querying the measurement range (unit: V、°C、%、Ω、c、r/s)

* Temperature range cannot be set to 100 or 500 at Sensor is B.

Reference command (the LR8410,LR8416 command.)

#### (4) Sets and queries the measurement range of an input channel.

Syntax      (command)    :UNIT:RANGE ch\$,A  
               (query)     :UNIT:RANGE? ch\$  
               (response)   ch\$,A<NR3>  
                           ch\$=CH1_1 to CH7_15  
                           A=volt(V),tc,rtd(C),humid(%),resist(OHM),heat(V),  
                           count(c),revolve(r/s),current(A),findex,fgrowth  
                           (heat(V) is only for LR8416)

Explanation   Sets the measurement range for the channel designated by ch\$ to a numerical value.  
 (When the range of setting is not exist. and upper range of setting is exist.  
 It becomes the upper range.)

Returns the current measurement range for the channel designated by ch\$ as an NR3 numerical value.

Example      :UNIT:RANGE CH1_1,+100.E-3

Sets the measurement range for channel 1-1 to 100 mV.

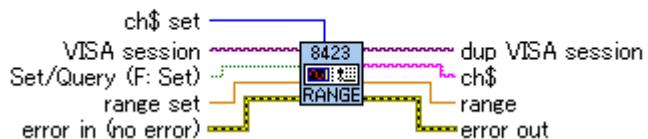

Note          Please set up A=15, when it makes the range of 1-5V with voltage.  
 Note          This command is effective only when LR8511 Wireless Universal Unit or LR8510 Wireless Volt/Temp Unit or LR8512 Wireless Pulse Logger or LR8513 Wireless Clamp Logger or LR8514 Wireless Humidity Logger or LR8515 Wireless Voltage/Temp Logger or LR8520 Wireless Fungal Logger's registered channel.  
 Temperature range cannot be set to 100 or 500 at Sensor is B.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 55
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

### 4-3-29. HIOKI 84series Unit Range_8423.vi

Sets or queries the measurement range of an input channel.

HIOKI 84series Unit Range_8423.vi

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
range set	DBL	Specifies the measurement range (unit: V, °C) *
ch\$	abc	Specified channel
range	DBL	The result of querying the measurement range (unit: V, °C)

Reference command (the 8423 command.)

(6) Sets and queries the measurement range of an input channel.

Syntax (command) :UNIT:RANGE unit\$,ch\$,A

(query) :UNIT:RANGe? unit\$,ch\$

(response) unit\$,ch\$,A<NR3>

unit\$=UNIT1 to UNIT8

ch\$=CH1 to CH15

A=volt(V),tc,rtd(C),humid(%)

**Explanation** Sets the measurement range for the channel designated by unit\$,ch\$ to a numerical value.

Returns the current measurement range for the channel designated by unit\$,ch\$ as an NR3 numerical value.

Example :UNIT:RANGE UNIT1,CH1,+100.E-3

**MEASUREMENT RANGE** Sets the measurement range for unit 1,channel 1 to 100 mV.

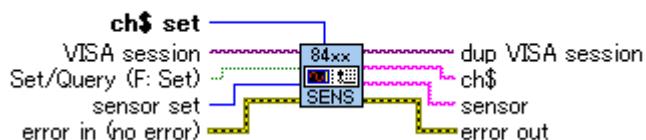

Note Please set up A=15, when it makes the range of 1~5V with voltage.  
Note This command is effective only when 8949 Universal Unit

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>56</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-30. HIOKI 84series Unit Sensor.vi

Sets or queries the sensor kind for tc mode.

**HIOKI 84series Unit Sensor.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Sensor set	String	Specifies the sensor kind for tc mode Valid range: 0(=K), 1(=J), 2(=E), 3(=T), 4(=N), 5(=R), 6(=S), 7(=B), 8(=W)*
ch\$	String	Specified channel
sensor	String	The result of querying the sensor kind for tc mode

* Sensor cannot be set to B at temperature range is 100 or 500.

Reference command (the LR8400,LR8401,LR8402 command.)

(6) Sets and queries the sensor kind for tc mode.

Syntax      (command) :UNIT:SENSor ch\$,A\$  
               (query) :UNIT:SENSOR? ch\$  
               (response) ch\$,A\$  
                     ch\$=CH1_1 to CH4_15  
                     A\$=K,J,E,T,N,R,S,B,W

Explanation      Sets the sensor kind for the channel designated by ch\$.  
                     Returns the current sensor kind for the channel designated by ch\$ as character data.

Example      :UNIT:SENSor CH1_1,K  
                     Sets the sensor kind for channel 1-1 to K.

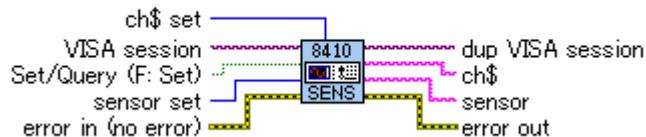

Note      This command is effective only when LR8501 Universal Unit  
                     or LR8500 Volt/Temp Unit.  
                     Sensor cannot be set to B at temperature range is 100 or 500.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>57</b>

#### 4-3-31. HIOKI 84series Unit Sensor_LR8410.vi

Sets or queries the sensor kind for tc mode.

**HIOKI 84series Unit Sensor_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Sensor set	[BX]	Specifies the sensor kind for tc mode Valid range: 0(=K), 1(=J), 2(=E), 3(=T), 4(=N), 5(=R), 6(=S), 7(=B), 8(=W)*
ch\$	[abc]	Specified channel
sensor	[abc]	The result of querying the sensor kind for tc mode

* Sensor cannot be set to B at temperature range is 100 or 500.

**Reference command (the LR8410,LR8416 command.)**

**(6) Sets and queries the sensor kind for tc mode.**

Syntax      (command) :UNIT:SENSor ch\$,A\$  
               (query) :UNIT:SENSor? ch\$  
               (response) ch\$,A\$  
                   ch\$=CH1_1 to CH7_15  
                   A\$=K,J,E,T,N,R,S,B,W

Explanation     Sets the sensor kind for the channel designated by ch\$.  
                  Returns the current sensor kind for the channel designated by ch\$ as character data.

Example       :UNIT:SENSor CH1_1,K  
                  Sets the sensor kind for channel 1-1 to K.

Note           This command is effective only when LR8511 Wireless Universal Unit  
                  or LR8510 Wireless Volt/Temp Unit  
                  or LR8515 Wireless Voltage/Temp Logger's registered channel.  
                  LR8515 can be selected only K and T.

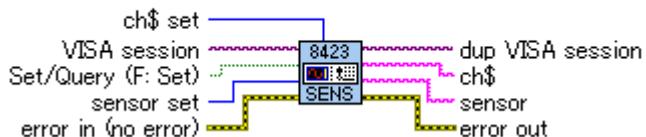

Sensor cannot be set to B at temperature range is 100 or 500.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>58</b>

#### 4-3-32. HIOKI 84series Unit Sensor_8423.vi

Sets or queries the sensor kind for tc mode.

**HIOKI 84series Unit Sensor_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Sensor set		Specifies the sensor kind for tc mode Valid range: 0(=K), 1(=J), 2(=E), 3(=T), 4(=N), 5(=R), 6(=S), 7(=B), 8(=W)*
ch\$		Specified channel
sensor		The result of querying the sensor kind for tc mode

Reference command (the 8423 command.)

(7) Sets and queries the sensor kind for tc mode.

Syntax      (command)    :UNIT:SENSor unit\$,ch\$,A\$  
               (query)     :UNIT:SENSor? unit\$,ch\$  
               (response)    unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=K,J,E,T,N,R,S,B,W

Explanation    Sets the sensor kind for the channel designated by unit\$,ch\$.  
                  Returns the current sensor kind for the channel designated by  
                  unit\$,ch\$ as character data.

Example      :UNIT:SENSor UNIT1,CH1,K  
                  Sets the sensor kind for unit 1,channel 1 to K.

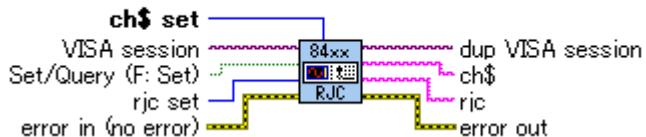

Note          This command is effective only when 8949 Universal Unit  
                  or 8948 Voltage/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 59

#### 4-3-33. HIOKI 84series Unit Rjc.vi

Sets or queries the point of contact compensation for tc mode.

**HIOKI 84series Unit Rjc.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
rjc set		Specifies the point of contact compensation for tc mode Valid range: 0(=IN), 1(=EXT)
ch\$		Specified channel
rjc		The result of querying the point of contact compensation for tc mode

Reference command (the LR8400,LR8401,LR8402 command.)

(7) Sets and queries the point of contact compensation for tc mode.

Syntax      (command) :UNIT:RJC ch\$,A\$  
               (query) :UNIT:RJC? ch\$  
               (response) ch\$,A\$  
                     ch\$=CH1_1 to CH4_15  
                     A\$=INT,EXT

Explanation    Sets the point of contact compensation for the channel designated by ch\$.

                Returns the current point of contact compensation for the channel designated by ch\$ as character data.

Example      :UNIT:RJC CH1_1,INT

                Sets the point of contact compensation for channel 1-1 to int.

Note

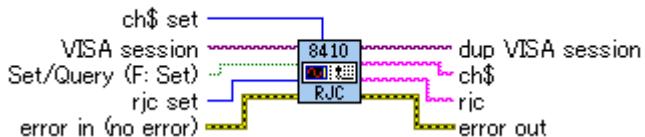

                This command is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 60

#### 4-3-34. HIOKI 84series Unit Rjc_LR8410.vi

Sets or queries the point of contact compensation for tc mode.

**HIOKI 84series Unit Rjc_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
rjc set	[↔]	Specifies the point of contact compensation for tc mode Valid range: 0(=IN), 1(=EXT)
ch\$	[abc]	Specified channel
rjc	[abc]	The result of querying the point of contact compensation for tc mode

Reference command (the LR8410,LR8416 command.)

(7) Sets and queries the point of contact compensation for tc mode.

Syntax      (command) :UNIT:RJC ch\$,A\$  
               (query) :UNIT:RJC? ch\$  
               (response) ch\$,A\$  
                     ch\$=CH1_1 to CH7_15  
                     A\$=INT,EXT

Explanation    Sets the point of contact compensation for the channel designated by ch\$.

Returns the current point of contact compensation for the channel designated by ch\$ as character data.

Example      :UNIT:RJC CH1_1,INT

Sets the point of contact compensation for channel 1-1 to int.

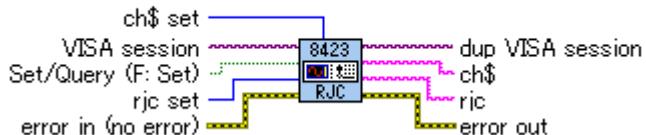

Note          This command is effective only when LR8511 Wireless Universal Unit or LR8510 Wireless Volt/Temp Unit or LR8515 Wireless Voltage/Temp Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>61</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-35. HIOKI 84series Unit Rjc_8423.vi

Sets or queries the point of contact compensation for tc mode.

**HIOKI 84series Unit Rjc_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
rjc set		Specifies the point of contact compensation for tc mode Valid range: 0(=IN), 1(=EXT)
ch\$		Specified channel
rjc		The result of querying the point of contact compensation for tc mode

Reference command (the 8423 command.)

(8) Sets and queries the point of contact compensation for tc mode.

Syntax      (command)    :UNIT:RJC unit\$,ch\$,A\$  
               (query)     :UNIT:RJC? unit\$,ch\$  
               (response)   unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=INT,EXT

Explanation   Sets the point of contact compensation for the channel  
                   designated by unit\$,ch\$.  
                   Returns the current point of contact compensation for the  
                   channel designated by unit\$,ch\$ as character data.

Example      :UNIT:RJC UNIT1,CH1,INT

Sets the point of contact compensation for unit 1,channel 1 to int.

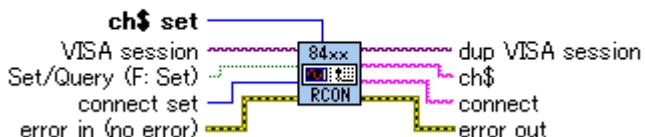

Note          This command is effective only when 8949 Universal Unit  
                   or 8948 Voltage/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 62

#### 4-3-36. HIOKI 84series Unit Rconnect.vi

Sets or queries the connect kind for rtd mode.

**HIOKI 84series Unit Rconnect.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
rjc set	[<>]	Specifies the connect kind for rtd mode Valid range: 0(=3LINE, 1(=4LINE) *
ch\$	[abc]	Specified channel
rjc	[abc]	The result of querying the connect kind for rtd mode

* This command is effective only when LR8501 Universal Unit.

Reference command (the LR8400,LR8401,LR8402 command.)

(10) Sets and queries the connect kind for rtd mode.

Syntax      (command)    :UNIT:RCONNECT ch\$,A\$  
               (query)     :UNIT:RCONNECT? ch\$  
               (response)   ch\$,A\$  
                     ch\$=CH1_1 to CH4_15  
                     A\$=3LINE,4LINE

Explanation   Sets the connect kind for the channel designated by ch\$.  
               Returns the current connect kind for the channel designated by ch\$ as character data.

Example      :UNIT:RCONNECT CH1_1,4LINE  
               Sets the rtd kind for channel 1-1 to 4line.

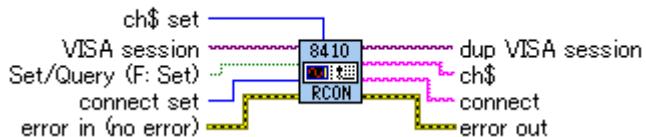

Note          This command is effective only when LR8501 Universal Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 63
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-37. HIOKI 84series Unit Rconnect_LR8410.vi

Sets or queries the connect kind for rtd mode.

**HIOKI 84series Unit Rconnect_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
rjc set	[◀▶]	Specifies the connect kind for rtd mode Valid range: 0(=3LINE, 1(=4LINE) *
ch\$	[abc]	Specified channel
rjc	[abc]	The result of querying the connect kind for rtd mode

* This command is effective only when LR8511 Wireless Universal Unit.

Reference command (the LR8410,LR8416 command.)

(10) Sets and queries the connect kind for rtd mode.

Syntax      (command) :UNIT:RCONnect ch\$,A\$  
               (query) :UNIT:RCONnect? ch\$  
               (response) ch\$,A\$  
                   ch\$=CH1_1 to CH7_15  
                   A\$=3LINE,4LINE

Explanation    Sets the connect kind for the channel designated by ch\$.  
                  Returns the current connect kind for the channel designated by ch\$ as character data.

Example      :UNIT:RCONnect CH1_1,4LINE

Sets the rtd kind for channel 1-1 to 4line.

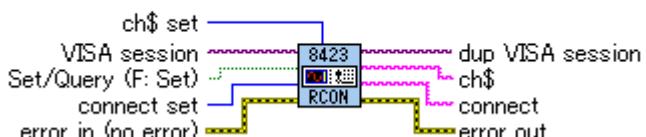

Note           This command is effective only when LR8511 Wireless Universal Unit's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>64</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-38. HIOKI 84series Unit Rconnect_8423.vi

Sets or queries the connect kind for rtd mode.

**HIOKI 84series Unit Rconnect_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
rjc set		Specifies the connect kind for rtd mode Valid range: 0(=3LINE, 1(=4LINE) *
ch\$		Specified channel
rjc		The result of querying the connect kind for rtd mode

* This command is effective only when 8949 Universal Unit.

**Reference command**    (the 8423 command.)

(11) Sets and queries the connect kind for rtd mode.

**Syntax**      (command)    :UNIT:RCONnect unit\$,ch\$,A\$  
                   (query)    :UNIT:RCONnect? unit\$,ch\$  
                   (response)    unit\$,ch\$,A\$  
                               unit\$=UNIT1 to UNIT8  
                               ch\$=CH1 to CH15  
                               A\$=3LINE,4LINE

**Explanation**    Sets the connect kind for the channel designated by unit\$,ch\$.  
                   Returns the current connect kind for the channel designated by unit\$,ch\$ as character data.

**Example**       :UNIT:RCONnect UNIT1,CH1,4LINE

Sets the rtd kind for unit 1,channel 1 to 4line.

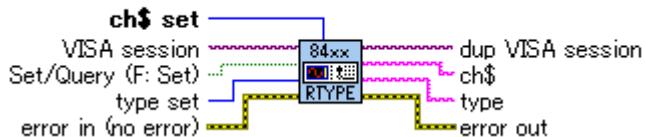

**Note**            This command is effective only when 8949 Universal Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 65
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-39. HIOKI 84series Unit Rtype.vi

Sets or queries the rtd kind for rtd mode.

**HIOKI 84series Unit Rtype.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Type set	U16	Specifies the rtd kind for rtd mode Valid range: 0(=PT100), 1(=JPT100)*
ch\$	abc	Specified channel
type	abc	The result of querying the rtd kind for rtd mode

* This command is effective only when LR8501 Universal Unit.

Reference command (the LR8400,LR8401,LR8402 command.)

(9) Sets and queries the rtd kind for rtd mode.

Syntax      (command) :UNIT:RTYPe ch\$,A\$  
               (query) :UNIT:RTYPe? ch\$  
               (response) ch\$,A\$  
                   ch\$=CH1_1 to CH4_15  
                   A\$=PT100,JPT100

Explanation    Sets the rtd kind for the channel designated by ch\$.  
                  Returns the current rtd kind for the channel designated by ch\$ as character data.

Example      :UNIT:RTYPe CH1_1,PT100

Sets the rtd kind for channel 1-1 to pt100.

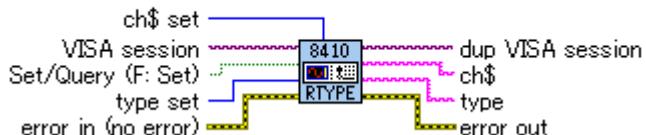

Note          This command is effective only when LR8501 Universal Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 66
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-40. HIOKI 84series Unit Rtype_LR8410.vi

Sets or queries the rtd kind for rtd mode.

**HIOKI 84series Unit Rtype_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Type set	[BX]	Specifies the rtd kind for rtd mode Valid range: 0(=PT100), 1(=JPT100)*
ch\$	[abc]	Specified channel
type	[abc]	The result of querying the rtd kind for rtd mode

* This command is effective only when LR8511 Wireless Universal Unit.

Reference command (the LR8410,LR8416 command.)

(9) Sets and queries the rtd kind for rtd mode.

Syntax      (command) :UNIT:RTYPe ch\$,A\$  
               (query) :UNIT:RTYPe? ch\$  
               (response) ch\$,A\$  
                     ch\$=CH1_1 to CH7_15  
                     A\$=PT100,JPT100

Explanation      Sets the rtd kind for the channel designated by ch\$.  
                     Returns the current rtd kind for the channel designated by ch\$ as character data.

Example      :UNIT:RTYPe CH1_1,PT100  
                     Sets the rtd kind for channel 1-1 to pt100.

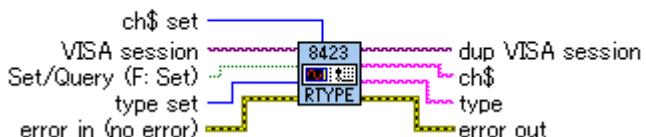

Note      This command is effective only when LR8511 Wireless Universal Unit's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 67
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-41. HIOKI 84series Unit Rtype_8423.vi

Sets or queries the rtd kind for rtd mode.

**HIOKI 84series Unit Rtype_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	UI16	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Type set	UI16	Specifies the rtd kind for rtd mode Valid range: 0(=PT100), 1(=JPT100)*
ch\$	abc	Specified channel
type	abc	The result of querying the rtd kind for rtd mode

* This command is effective only when 8949 Universal Unit.

Reference command (the 8423 command.)

(10) Sets and queries the rtd kind for rtd mode.

Syntax	(command) :UNIT:RTYPE unit\$,ch\$,A\$
	(query) :UNIT:RTYPE? unit\$,ch\$
	(response) unit\$,ch\$,A\$
	unit\$=UNIT1 to UNIT8
	ch\$=CH1 to CH15
	A\$=PT100,JPT100

Explanation	Sets the rtd kind for the channel designated by unit\$,ch\$. Returns the current rtd kind for the channel designated by unit\$,ch\$ as character data.
-------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------

Example	:UNIT:RTYPE UNIT1,CH1,PT100 Sets the rtd kind for unit 1,channel 1 to pt100.
---------	---------------------------------------------------------------------------------

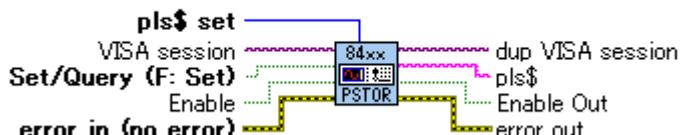

Note	This command is effective only when 8949 Universal Unit.
------	----------------------------------------------------------

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>68</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-42. HIOKI 84series Unit Pstore.vi

Sets or queries the store enable or disable for pulse channel data record.

**HIOKI 84series Unit Pstore.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
Store set	[<>]	Specifies the store enable or disable for pulse channel data record
pls\$	[abc]	Specified pulse channel
store	[abc]	The result of querying the store enable or disable for pulse channel data record

- * The pulse channel to be set should be made PLS measurement by using the command of :UNIT:PLSLogic PLS1,PLS to turn on the pulse collection by :UNIT:STORe PLS1,ON.  
:UNIT:STORe PLS1,ON becomes invalid when being set it to :UNIT:PLSLogic PLS1,LOGIC.  
To turn on the logic collection by :UNIT:STORe LOG,ON one or more of PLS1-PLS8 should be made LOGIC measurement by using the command of :UNIT:PLSLogic PLS1,LOGIC.  
When PLS1-PLS8 is entire PLS, :UNIT:STORe LOG,ON becomes invalid.

**Reference command (the LR8400,LR8401,LR8402 command.)**

- (1) Sets and queries the store enable or disable for channel data record.

Syntax (command) :UNIT:STORe ch\$,A\$  
(query) :UNIT:STORe? ch\$  
(response) ch\$,A\$  
ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30  
A\$=OFF,ON

Explanation Sets the store enable or disable for the channel designated by ch\$.  
Returns the current store enable or disable for the channel designated by ch\$ as character data.

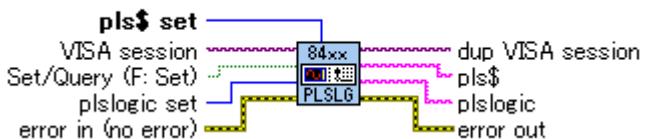

Example :UNITSTORe PLS1,ON  
Sets the store for pls1 to enable.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 69
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-43. HIOKI 84series Unit Plslogic.vi

Sets or queries the pulse or logic .

**HIOKI 84series Unit Plslogic.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
plslogic set	[TF]	Specifies the pulse or logic Valid range: 0(=PLS :Default),1(=LOGIC)
pls\$	[abc]	Specified pulse channel
plslogic	[abc]	The result of querying the pulse or logic

Reference command (the LR8400,LR8401,LR8402 command.)

(18) Sets and queries the pulse or logic.

Syntax      (command)    :UNIT:PLSLogic pls\$,A\$  
               (query)     :UNIT:PLSLogic? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=PLS,LOGIC

Explanation    Sets the pulse or logic for the channel designated by pls\$.  
                  Returns the current pulse or logic for the channel designated by  
                  pls\$ as character data.

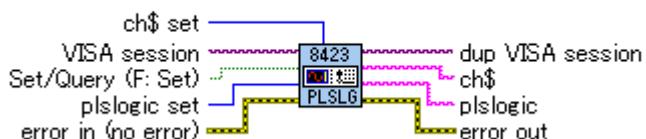

Example      :UNIT:PLSLogic PLS1,PLS  
                  Sets the pulse or logic for pls1 to PLS.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 70
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-44. HIOKI 84series Unit Plslogic_8423.vi

Sets or queries the pulse or logic .

**HIOKI 84series Unit Plslogic_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
plslogic set		Specifies the pulse or logic Valid range: 0(=PLS :Default),1(=LOGIC)
ch\$		Specified channel
plslogic		The result of querying the pulse or logic

* This command is effective only when 8996 Digital/Pulse Unit

**Reference command (the 8423 command.)**

**(18) Sets and queries the pulse or logic.**

**Syntax**      (command)    :UNIT:PLSLogic unit\$,ch\$,A\$  
                   (query)    :UNIT:PLSLogic? unit\$,ch\$  
                   (response)    unit\$,ch\$,A\$  
                               unit\$=UNIT1 to UNIT8  
                               ch\$=CH1 to CH15  
                               A\$=PLS,LOGIC

**Explanation**    Sets the pulse or logic for the channel designated by unit\$,ch\$.  
                   Returns the current pulse or logic for the channel designated by unit\$,ch\$ as character data.

**Example**      :UNIT:PLSLogic UNIT1,CH1,PLS

Sets the pulse or logic for unit 1,channel 1 to PLS.

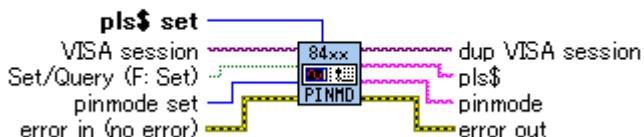

**Note**            This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>71</b>

#### 4-3-45. HIOKI 84series Unit Pinmode.vi

Sets or queries the measurement mode of an input pulse channel.

**HIOKI 84series Unit Pinmode.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
pinmode set	[TF]	Specifies the measurement mode of an input pulse channel Valid range: 0(=COUNT :Default),1(=REVOLVE)
pls\$	[abc]	Specified pulse channel
pinmode	[abc]	The result of the measurement mode of an input pulse channel

Reference command (the LR8400,LR8401,LR8402 command.)

(11) Sets and queries the measurement mode of an input pulse channel.

Syntax      (command)    :UNIT:PINM0de pls\$,A\$  
               (query)     :UNIT:PINM0de? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=COUNT,REVOLVE

Explanation    Sets the measurement mode for the pulse channel designated by pls\$.

Returns the current measurement mode for the pulse channel designated by pls\$ as character data.

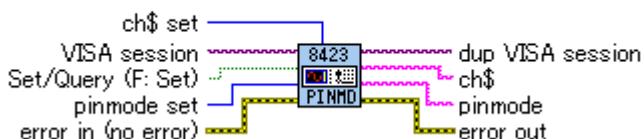

Example      :UNIT:PINM0de PLS1,COUNT  
                  Sets the measurement mode for pls1 to count.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>72</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-46. HIOKI 84series Unit Pinmode_8423.vi

Sets or queries the measurement mode of an input pulse channel.

**HIOKI 84series Unit Pinmode_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
pinmode set	[<>]	Specifies the measurement mode of an input pulse channel Valid range: 0(=COUNT :Default),1(=REVOLVE)
ch\$	[abc]	Specified channel
pinmode	[abc]	The result of the measurement mode of an input pulse channel

* This command is effective only when 8996 Digital/Pulse Unit

Reference command (the 8423 command.)

(12) Sets and queries the measurement mode of an input pulse channel.

Syntax	(command) :UNIT:PINMODOE unit\$,ch\$,A\$
	(query) :UNIT:PINMODOE? unit\$,ch\$
	(response) unit\$,ch\$,A\$
	unit\$=UNIT1 to UNIT8
	ch\$=CH1 to CH15
	A\$=COUNT,REVOLVE

Explanation Sets the measurement mode for the pulse channel designated by unit\$,ch\$.

Returns the current measurement mode for the pulse channel designated by unit\$,ch\$ as character data.

Example :UNIT:PINMODOE UNIT1,CH1,COUNT

Sets the measurement mode for unit 1,channel 1 to count.

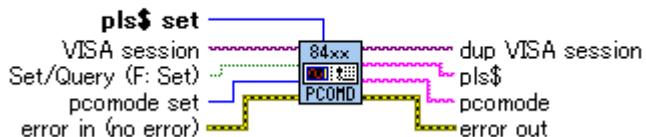

Note This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 73
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-47. HIOKI 84series Unit Pcomode.vi

Sets or queries the count mode of an input pulse channel.

**HIOKI 84series Unit Pcomode.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
pcemode set	[<>]	Specifies the count mode of an input pulse channel Valid range: 0(=ADD :Default),1(=INST)
pls\$	[abc]	Specified pulse channel
pcemode	[abc]	The result of the count mode of an input pulse channel

Reference command (the LR8400,LR8401,LR8402 command.)

(13) Sets and queries the count mode of an input pulse channel.

Syntax      (command)    :UNIT:PCOMode pls\$,A\$  
               (query)     :UNIT:PCOMode? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=ADD,INST

Explanation    Sets the count mode for the pulse channel designated by pls\$.

Returns the current count mode for the pulse channel designated by pls\$ as character data.

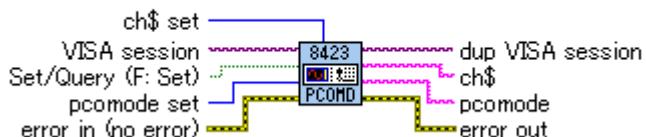

Example      :UNIT:PCOMode PLS1,ADD  
                  Sets the count mode for pls1 to add.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>74</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-48. HIOKI 84series Unit Pcomode_8423.vi

Sets or queries the count mode of an input pulse channel.

**HIOKI 84series Unit Pcomode_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
pcomode set	[<>]	Specifies the count mode of an input pulse channel Valid range: 0(=ADD :Default),1(=INST)
ch\$	[abc]	Specified channel
pcomode	[abc]	The result of the count mode of an input pulse channel

* This command is effective only when 8996 Digital/Pulse Unit.

**Reference command (the 8423 command.)**

(13) Sets and queries the count mode of an input pulse channel.

Syntax      (command)    :UNIT:PCOMODe unit\$,ch\$,A\$  
               (query)     :UNIT:PCOMODe? unit\$,ch\$  
               (response)   unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=ADD,INST

Explanation   Sets the count mode for the pulse channel designated by unit\$,ch\$.

                 Returns the current count mode for the pulse channel designated by unit\$,ch\$ as character data.

Example      :UNIT:PCOMODe UNIT1,CH1,ADD

                 Sets the count mode for unit 1,channel 1 to add.

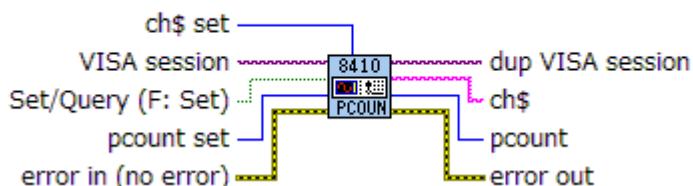

Note          This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 75
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-49. HIOKI 84series Unit Pcomode_LR8410.vi

Sets or queries the count mode of an input pulse channel.

**HIOKI 84series Unit Pcount_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	UI16	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
pcemode set	UI16	Specifies the count mode of an input pulse channel Valid range: 0(=ADD :Default),1(INST)
ch\$	abc	Specified channel
pcemode	abc	The result of the count mode of an input pulse channel

* This command is effective only when LR8512 Wireless Pulse Logger.

Reference command (the LR8410,LR8416 command.)

(12) Sets and queries the count mode of an input pulse channel.

Syntax	(command) :UNIT:PCOMODe ch\$,A\$
	(query) :UNIT:PCOMODe? ch\$
	(response) ch\$,A\$
	ch\$=CH1_1 to CH7_2
	A\$=ADD,INST

Explanation Sets the count mode for the pulse channel designated by ch\$.

Returns the current count mode for the pulse channel designated by ch\$ as character data.

Example :UNIT:PCOMODe CH1_1,ADD

Sets the count mode for pls1 to add.

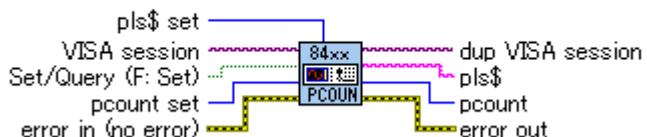

Note This command is effective only when LR8512 Wireless Pulse Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 76
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-50. HIOKI 84series Unit Pcount.vi

Sets or queries the pulse num per revolve.

**HIOKI 84series Unit Pcount.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
Pcount set	[U16]	Specifies the pulse num per revolve Valid range: 1 to 1000
pls\$	[abc]	Specified pulse channel
pcount	[U16]	The result of the pulse num per revolve

Reference command (the LR8400,LR8401,LR8402 command.)

(14) Sets and queries the pulse num per revolve.

Syntax      (command)    :UNIT:PCOUNT pls\$,A  
               (query)     :UNIT:PCOUNT? pls\$  
               (response)    pls\$,A<NR1>  
                           pls\$=PLS1 to PLS8  
                           A=pulse num per revolve(1 to 1000)

Explanation    Sets the pulse num per revolve for the pulse channel designated by pls\$ in the range to a numerical value.  
                  Returns the current pulse num per revolve for the pulse channel designated by pls\$ as an NR1 numerical value

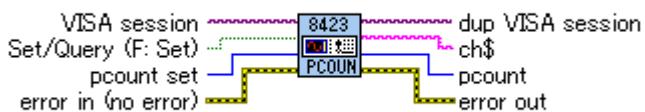

Example      :UNIT:PCOUNT PLS1,1  
                  Sets the pulse num per revolve for pls1 to 1.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 77
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-51. HIOKI 84series Unit Pcount_8423.vi

Sets or queries the pulse num per revolve.

**HIOKI 84series Unit Pcount_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Pcount set	U16	Specifies the pulse num per revolve Valid range: 1 to 1000
ch\$	abc	Specified channel
pcount	U16	The result of the pulse num per revolve

* This command is effective only when 8996 Digital/Pulse Unit.

**Reference command (the 8423 command.)**

(14) Sets and queries the pulse num per revolve.

Syntax      (command)    :UNIT:PCOUNT unit\$,ch\$,A  
               (query)     :UNIT:PCOUNT? unit\$,ch\$  
               (response)   unit\$,ch\$,A<NR1>  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A=pulse num per revolve(1 to 9999)

Explanation   Sets the pulse num per revolve for the pulse channel designated by unit\$,ch\$ in the range to a numerical value.

Returns the current pulse num per revolve for the pulse channel designated by unit\$,ch\$ as an NR1 numerical value

Example      :UNIT:PCOUNT UNIT1,CH1,1

Sets the pulse num per revolve for unit 1,channel 1 to 1.

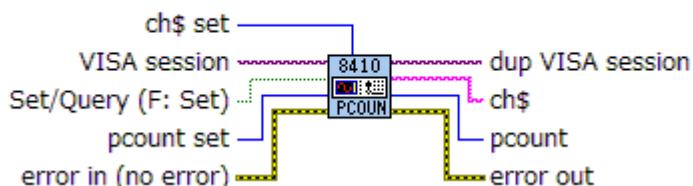

Note          This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 78
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-52. HIOKI 84series Unit Pcount_LR8410.vi

Sets or queries the pulse num per revolve.

##### HIOKI 84series Unit Pcount_LR8410.vi

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
Pcount set	[U16]	Specifies the pulse num per revolve Valid range: 1 to 1000
ch\$	[abc]	Specified channel
pcount	[U16]	The result of the pulse num per revolve

* This command is effective only when LR8512 Wireless Pulse Logger.

##### Reference command (the LR8410,LR8416 command.)

###### (13) Sets and queries the pulse num per revolve.

Syntax      (command)    :UNIT:PCOUNT ch\$,A  
               (query)     :UNIT:PCOUNT? ch\$  
               (response)   ch\$,A<NR1>  
                           ch\$=CH1_1 to CH7_2  
                           A=pulse num per revolve(1 to 1000)

Explanation   Sets the pulse num per revolve for the pulse channel designated by ch\$ in the range to a numerical value.

Returns the current pulse num per revolve for the pulse channel designated by ch\$ as an NR1 numerical value

Example      :UNIT:PCOUNT CH1_1,1

Sets the pulse num per revolve for CH1_1 to 1.

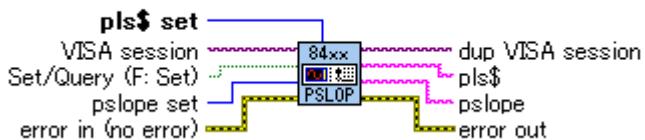

Note  
channel.      This command is effective only when LR8512 Wireless Pulse Logger's registered

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 79
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-53. HIOKI 84series Unit Pslope.vi

Sets or queries the pulse channel count slope.

**HIOKI 84series Unit Pslope.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set		Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
pslope set		Specifies the pulse channel count slope Valid range: 0(=UP :Default),1(=DOWN)
pls\$		Specified pulse channel
pslope		The result of the pulse channel count slope

Reference command (the LR8400,LR8401,LR8402 command.)

(15) Sets and queries the pulse channel count slope.

Syntax      (command)    :UNIT:PSLOPe pls\$,A\$  
               (query)     :UNIT:PSLOPe? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=UP,DOWN

Explanation    Sets the count slope for the channel designated by pls\$.  
                  Returns the current count slope for the channel designated by  
                  pls\$ as character data.

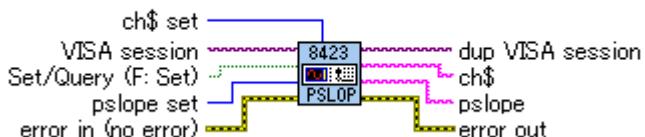

Example      :UNIT:PSLOPe PLS1,UP  
                  Sets the count slop for pls1 to up.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 80
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-54. HIOKI 84series Unit Pslope_8423.vi

Sets or queries the pulse channel count slope.

**HIOKI 84series Unit Pslope_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
pslope set	[U16]	Specifies the pulse channel count slope Valid range: 0(=UP :Default),1(=DOWN)
ch\$	[abc]	Specified channel
pslope	[abc]	The result of the pulse channel count slope

* This command is effective only when 8996 Digital/Pulse Unit

Reference command (the 8423 command.)

(15) Sets and queries the pulse channel count slope.

Syntax      (command)    :UNIT:PSLOPe unit\$,ch\$,A\$  
               (query)     :UNIT:PSLOPe? unit\$,ch\$  
               (response)    unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=UP,DOWN

Explanation    Sets the count slope for the channel designated by unit\$,ch\$.  
                  Returns the current count slope for the channel designated by unit\$,ch\$ as character data.

Example       :UNIT:PSLOPe UNIT1,CH1,UP

Sets the count slop for unit 1,channel 1 to up.

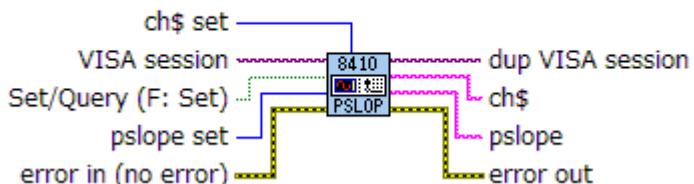

Note           This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 81
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-55. HIOKI 84series Unit Pslope_LR8410.vi

Sets or queries the pulse channel count slope.

##### **HIOKI 84series Unit Pslope_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
pslope set	U16	Specifies the pulse channel count slope Valid range: 0(=UP :Default),1(=DOWN)
ch\$	abc	Specified channel
pslope	abc	The result of the pulse channel count slope

* This command is effective only when LR8512 Wireless Pulse Logger.

##### Reference command (the LR8410,LR8416 command.)

(15) Sets and queries the pulse channel count slope.

Syntax	(command) :UNIT:PSLOPe ch\$,A\$
	(query) :UNIT:PSLOPe? ch\$
	(response) ch\$,A\$
	ch\$=CH1_1 to CH7_2
	A\$=UP,DOWN

Explanation Sets the count slope for the channel designated by ch\$.

Returns the current count slope for the channel designated by ch\$ as character data.

Example :UNIT:PSLOPe CH1_1,UP

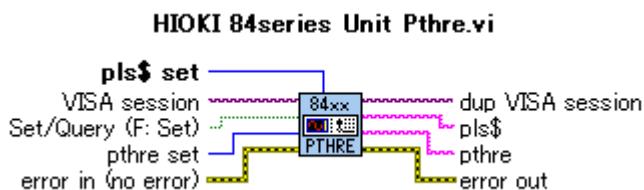

Sets the count slop for CH1_1 to up.

Note This command is effective only when LR8512 Wireless Pulse Logger's registered channel..

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 82
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-56. HIOKI 84series Unit Pthre.vi

Sets or queries the pulse threshold level.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
Pthre set	[BX]	Specifies the pulse threshold level Valid range: 0(=1V :Default),1(=4V)
pls\$	[abc]	Specified pulse channel
pthre	[abc]	The result of the pulse threshold level

Reference command (the LR8400,LR8401,LR8402 command.)

(16) Sets and queries the pulse threshold level.

Syntax      (command)    :UNIT:PTHRe pls\$,A\$  
               (query)     :UNIT:PTHRe? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=1V,4V

Explanation    Sets the pulse threshold level for the channel designated by pls\$.  
                   Returns the current pulse threshold level for the channel designated by  
                   pls\$ as character data.

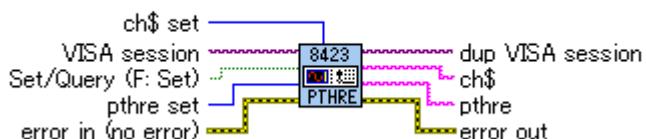

Example      :UNIT:PTHRe PLS1,1V  
                  Sets the pulse threshold level for pls1 to 1V.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 83
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-57. HIOKI 84series Unit Pthre_8423.vi

Sets or queries the pulse threshold level.

**HIOKI 84series Unit Pthre_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Pthre set		Specifies the pulse threshold level Valid range: 0(=1V :Default),1(=4V)
ch\$		Specified channel
pthre		The result of the pulse threshold level

* This command is effective only when 8996 Digital/Pulse Unit

**Reference command (the 8423 command.)**

(16) Sets and queries the pulse threshold level.

Syntax      (command)    :UNIT:PTHRe unit\$,ch\$,A\$  
               (query)     :UNIT:PTHRe? unit\$,ch\$  
               (response)    unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=1V,4V

Explanation    Sets the pulse threshold level for the channel designated by unit\$,ch\$.  
                  Returns the current pulse threshold level for the channel designated by unit\$,ch\$ as character data.

Example      :UNIT:PTHRe UNIT1,CH1,1V

Sets the pulse threshold level for unit 1,channel 1 to 1V.

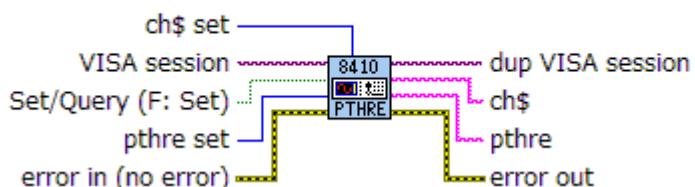

Note          This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 84
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-58. HIOKI 84series Unit Pthre_LR8410.vi

Sets or queries the pulse threshold level.

**HIOKI 84series Unit Pthre_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
Pthre set	[<>]	Specifies the pulse threshold level Valid range: 0(=1V :Default),1(=4V)
ch\$	[abc]	Specified channel
pthre	[abc]	The result of the pulse threshold level

* This command is effective only when LR8512 Wireless Pulse Logger.

Reference command (the LR8410,LR8416 command.)

(16) Sets and queries the pulse threshold level.

Syntax      (command)    :UNIT:PTHRe ch\$,A\$\n              (query)     :UNIT:PTHRe? ch\$\n              (response)   ch\$,A\$\n                          ch\$=CH1_1 to CH7_2\n                         A\$=1V,4V

Explanation   Sets the pulse threshold level for the channel designated by ch\$.\n             Returns the current pulse threshold level for the channel designated by ch\$ as character data.

Example      :UNIT:PTHRe CH1_1,1V

Sets the pulse threshold level for CH1_1 to 1V.

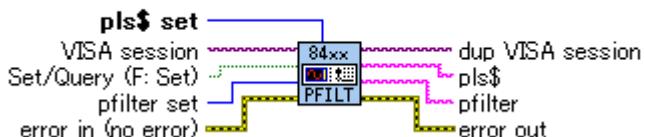

Note          This command is effective only when LR8512 Wireless Pulse Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>85</b>

#### 4-3-59. HIOKI 84series Unit Pfilter.vi

Sets or queries the pulse channel filter.

**HIOKI 84series Unit Pfilter.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
Pfilter set	[Boolean]	Specifies the pulse channel filter Valid range: 0(=OFF :Default),1(=ON)
pls\$	[abc]	Specified pulse channel
pfilter	[abc]	The result of the pulse channel filter

Reference command (the LR8400,LR8401,LR8402 command.)

(17) Sets and queries the pulse channel filter.

Syntax      (command)    :UNIT:PFILTER pls\$,A\$  
               (query)     :UNIT:PFILTER? pls\$  
               (response)    pls\$,A\$  
                           pls\$=PLS1 to PLS8  
                           A\$=OFF,ON

Explanation    Sets the filter for the channel designated by pls\$.  
                  Returns the current filter for the channel designated by  
                  pls\$ as character data.

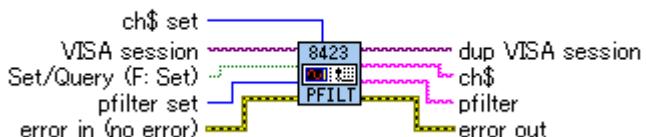

Example      :UNIT:PFILTER PLS1,ON  
                  Sets the filter for pls1 to ON.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 86
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-60. HIOKI 84series Unit Pfilter_8423.vi

Sets or queries the pulse channel filter.

**HIOKI 84series Unit Pfilter_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Pfilter set		Specifies the pulse channel filter Valid range: 0(=OFF :Default),1(=ON)
ch\$		Specified channel
pfilter		The result of the pulse channel filter

* This command is effective only when 8996 Digital/Pulse Unit

**Reference command** (the 8423 command.)

(17) Sets and queries the pulse channel filter.

Syntax	(command) :UNIT:PFILTER unit\$,ch\$,A\$
	(query) :UNIT:PFILTER? unit\$,ch\$
	(response) unit\$,ch\$,A\$
	unit\$=UNIT1 to UNIT8
	ch\$=CH1 to CH15
	A\$=OFF,ON

Explanation	Sets the filter for the channel designated by unit\$,ch\$. Returns the current filter for the channel designated by unit\$,ch\$ as character data.
-------------	-------------------------------------------------------------------------------------------------------------------------------------------------------

Example :UNIT:PFILTER UNIT1,CH1,ON

Sets the filter for unit 1,channel 1 to ON.

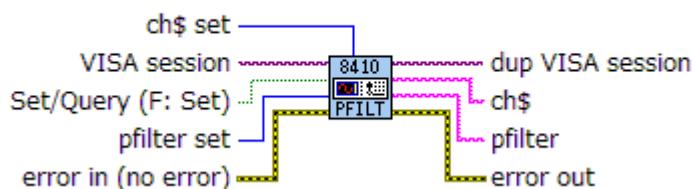

Note This command is effective only when 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>87</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-61. HIOKI 84series Unit Pfilter_LR8410.vi

Sets or queries the pulse channel filter.

##### **HIOKI 84series Unit Pfilter_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)		Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set		Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
Pfilter set		Specifies the pulse channel filter Valid range: 0(=OFF :Default),1(=ON)
ch\$		Specified channel
pfilter		The result of the pulse channel filter

* This command is effective only when LR8512 Wireless Pulse Logger.

Reference command      (the 8423 command.)

(14) Sets and queries the pulse channel filter.

Syntax      (command)    :UNIT:PFLTer ch\$,A\$  
               (query)     :UNIT:PFLTer? ch\$  
               (response)    ch\$,A\$  
                           ch\$=CH1_1 to CH7_2  
                           A\$=OFF,ON

Explanation      Sets the filter for the channel designated by ch\$.

                    Returns the current filter for the channel designated by ch\$ as character data.

Example      :UNIT:PFLTer CH1_1,ON

                    Sets the filter for CH1_1 to ON.

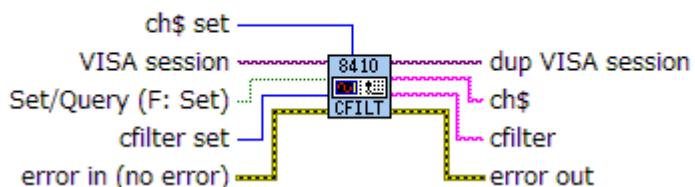

Note      This command is effective only when LR8512 Wireless Pulse Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 88
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-62. HIOKI 84series Unit Cfilter_LR8410.vi

Sets or queries the clamp filter.

**HIOKI 84series Unit Cfilter_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
Cfilter set	Boolean	Specifies the clamp filter Valid range: 0(=OFF :Default),1(=ON)
ch\$	String	Specified channel
cfilter	Boolean	The result of the clamp filter

* This command is effective only when LR8513 Wireless Clamp Logger.

Reference command (the LR8410,LR8416 command.)

(17) Sets and queries the clamp filter.

Syntax      (command)    :UNIT:CFILTter ch\$,A\$  
               (query)     :UNIT:CFILTter? ch\$  
               (response)   ch\$,A\$  
                           ch\$=CH1_1 to CH7_2  
                           A\$=OFF,ON

Explanation   Sets the filter for the channel designated by ch\$.

Returns the current filter for the channel designated by ch\$ as character data.

Example      :UNIT:CFILTter CH1_1,ON

Sets the filter for CH1_1 to ON.

Note  
channel.

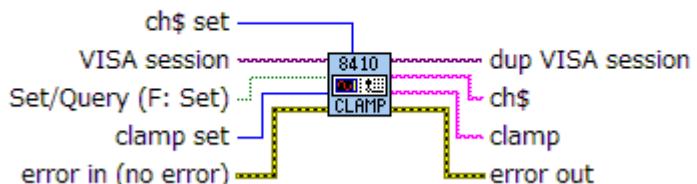

This command is effective only when LR8513 Wireless Clamp Logger's registered

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 89

#### 4-3-63. HIOKI 84series Unit Clamp_LR8410.vi

Sets or queries the clamp sensor.

**HIOKI 84series Unit Clamp_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15) (It can be used to 2 channels in each logger.)
Clamp set	U16	Specifies the clamp sensor Valid range::0(=9675 :Default),1(=9657-10),2(=9695-02),3(=CT6500),4(=9669),5(=CT9691-90),6(=CT9692-90),7(=CT9693-90)
ch\$	abc	Specified channel
clamp	abc	The result of the clamp sensor

* This command is effective only when LR8513 Wireless Clamp Logger.

Reference command (the LR8410,LR8416 command.)

(18) Sets and queries the clamp sensor.

Syntax      (command)    :UNIT:CLAMP ch\$,A\$  
               (query)     :UNIT:CLAMP? ch\$  
               (response)   ch\$,A\$  
                           ch\$=CH1_1 to CH7_2

A\$=9675,9657-10,9695-02,CT6500,9669,CT9691-90,CT9692-90,CT9693-90

Explanation   Sets the sensor for the channel designated by ch\$.  
                  Returns the current sensor for the channel designated by ch\$ as character data.

Example      :UNIT:CLAMP CH1_1,9675  
                  Sets the sensor for CH1_1 to 9675.

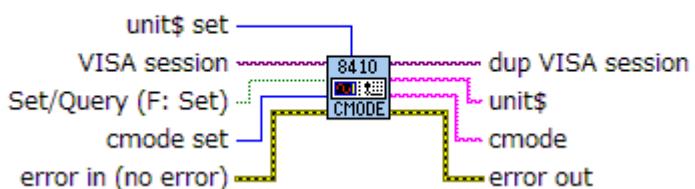

Note          This command is effective only when LR8513 Wireless Clamp Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 90

4-3-64. HIOKI 84series Unit Cmode_LR8410.vi

Sets or queries the clamp mode.

**HIOKI 84series Unit Cmode_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
unit\$ set	[U16]	Specifies the unit Valid range: 0(=UNIT1) to 6(=UNIT7)
Cmode set	[↔]	Specifies the clamp mode Valid range: 0(=INST :Default),1(=AVE)
unit\$	[abc]	Specified unit
cmode	[abc]	The result of the clamp mode

* This command is effective only when LR8513 Wireless Clamp Logger.

Reference command (the LR8410,LR8416 command.)

(19) Sets and queries the clamp mode.

Syntax      (command)    :UNIT:CMODe unit\$,A\$  
               (query)     :UNIT:CMODe? unit\$  
               (response)   unit\$,A\$  
                           unit\$=UNIT1 to UNIT7  
                           A\$=INST,AVE

Explanation    Sets the mode for the channel designated by unit\$.  
                  Returns the current mode the unit designated by  
                  unit\$ as character data.

Example      :UNIT:CMODe UNIT1,INST  
                  Sets the mode for UNIT1 to INST.

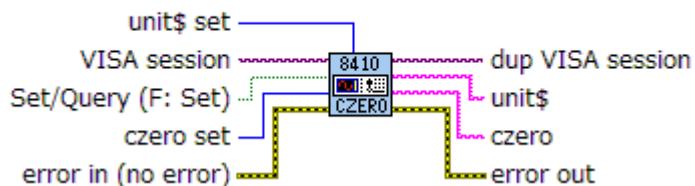

Note           This command is effective only when LR8513 Wireless Clamp Logger's registered  
                  channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 91
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-65. HIOKI 84series Unit Czero_LR8410.vi

Sets or queries the clamp zero suppress.

**HIOKI 84series Unit Czero_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
unit\$ set	[U16]	Specifies the unit Valid range: 0(=UNIT1) to 6(=UNIT7)
Czero set	[TB]	Specifies the clamp zero suppress Valid range: 0(OFF),1(ON :Default)
unit\$	[abc]	Specified unit
czero	[abc]	The result of the clamp zero suppress

* This command is effective only when LR8513 Wireless Clamp Logger.

Reference command (the LR8410,LR8416 command.)

(20) Sets and queries the clamp zero suppress.

Syntax      (command)    :UNIT:CZEro unit\$,A\$  
               (query)     :UNIT:CZEro? unit\$  
               (response)   unit\$,A\$  
                           unit\$=UNIT1 to UNIT7  
                           A\$=OFF,ON

Explanation   Sets the zero suppress for the channel designated by unit\$.  
                  Returns the current zero suppress the unit designated by  
                  unit\$ as character data.

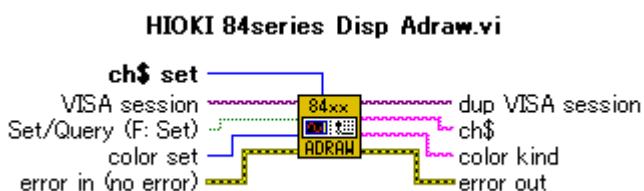

Example      :UNIT:CZEro UNIT1,ON  
                  Sets the zero suppress for UNIT1 to ON.

Note          This command is effective only when LR8513 Wireless Clamp Logger's registered  
                  channel

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 92
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-66. HIOKI 84series Disp Adraw.vi

Sets or queries waveform display color.

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Color set	String	Specifies the waveform display color Valid range: 0(=OFF), 1(=C1) to 24(=C24)
ch\$	String	Specified channel
color	String	The result of querying the waveform display color

Reference command (the LR8400,LR8401,LR8402 command.)

(5) Sets and queries the waveform display color.

Syntax      (command)    :DISPlay:DRAWing ch\$,A\$  
               (query)     :DISPlay:DRAWing? ch\$  
               (response)   ch\$,A\$  
                           ch\$=CH1_1 to CH4_15  
                           A\$=OFF,C1 to C24

Explanation   Sets the waveform display color for the channel designated by ch\$.

Returns the waveform display color for the channel designated by ch\$ as character data.

Example      :DISPlay:DRAWing CH1_1,C1

Displays the channel 1-1 waveform in display color 1.

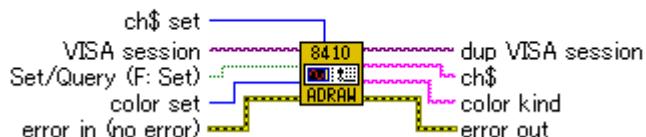

Note          This command is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 93
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-67. HIOKI 84series Disp Adraw_LR8410.vi

Sets or queries waveform display color.

**HIOKI 84series Disp Adraw_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Color set	[<>]	Specifies the waveform display color Valid range: 0(=OFF), 1(=C1) to 24(=C24)
ch\$	[abc]	Specified channel
color	[abc]	The result of querying the waveform display color

Reference command (the LR8410,LR8416 command.)

(5) Sets and queries the waveform display color.

Syntax      (command) :DISPLAY:DRAWING ch\$,A\$  
               (query) :DISPLAY:DRAWING? ch\$  
               (response) ch\$,A\$  
                   ch\$=CH1_1 to CH7_15  
                   A\$=OFF,C1 to C24

Explanation   Sets the waveform display color for the channel designated by ch\$.

Returns the waveform display color for the channel designated by ch\$ as character data.

Example      :DISPLAY:DRAWING CH1_1,C1

Displays the channel 1-1 waveform in display color 1.

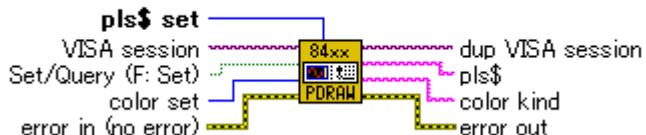

Note          This command is effective only when LR8511 Wireless Universal Unit or LR8510 Wireless Volt/Temp Unit or LR8512 Wireless Pulse Logger or LR8513 Wireless Clamp Logger or LR8514 Wireless Humidity Logger or LR8515 Wireless Voltage/Temp Logger or LR8520 Wireless Fungal Logger's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 94
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-68. HIOKI 84series Disp Pdraw.vi

Sets or queries pulse waveform display color.

**HIOKI 84series Disp Pdraw.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
pls\$ set	[U16]	Specifies the pulse channel Valid range: 0(=PLS1) to 7(=PLS8)
Color set	[button]	Specifies the pulse waveform display color Valid range: 0(=OFF), 1(=C1) to 24(=C24)
pls\$	[abc]	Specified pulse channel
color	[abc]	The result of querying the pulse waveform display color

Reference command (the LR8400,LR8401,LR8402 command.)

(6) Sets and queries the pulse waveform display color.

Syntax      (command) :DISPLAY:PDRAWing pls\$,A\$  
               (query) :DISPLAY:PDRAWing? pls\$  
               (response) pls\$,A\$  
                   pls\$=PLS1 to PLS8  
                   A\$=OFF,C1 to C24

Explanation    Sets the pulse waveform display color for the channel designated by pls\$.  
                   Returns the pulse waveform display color for the channel designated by pls\$ as character data.

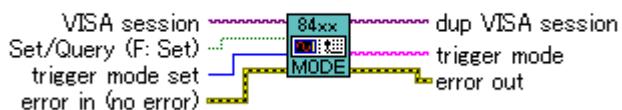

Example      :DISPLAY:PDRAWing PLS1,C1  
                   Displays the pulse 1 waveform in display color 1.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 95
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-69. HIOKI 84series Trig Mode.vi

Sets or queries trigger mode.

**HIOKI 84series Trig Mode.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
trigger mode set	[↔]	Specifies the trigger mode Valid range: 0 (=SINGLE: Default), 1 (=REPEAT)
trigger mode	[abc]	The result of querying the trigger mode

Reference command (the 8423 command.)

(2) Sets and queries the trigger mode.

Syntax      (command)    :TRIGger:MODE A\$  
               (query)     :TRIGger:MODE?  
               (response)   A\$  
                           A\$=SINGle,REPReat

Explanation   Sets the trigger mode.  
                  Returns the current trigger mode as character data.

Example      :TRIGger:MODE REPEat  
                  Sets the trigger mode to repeat.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) Sets and queries the trigger mode.

Syntax      (command)    :TRIGger:MODE A\$  
               (query)     :TRIGger:MODE?  
               (response)   A\$  
                           A\$=SINGle,REPReat

Explanation   Sets the trigger mode.  
                  Returns the current trigger mode as character data.

Example      :TRIGger:MODE REPEat  
                  Sets the trigger mode to repeat.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 96
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(2) Sets and queries the trigger mode.

Syntax	(command) :TRIGger:MODE A\$
	(query) :TRIGger:MODE?
	(response) A\$
	A\$=SINGle,REPEat
	(SINGle=repeat off, REPEat=repeat on)

Explanation Sets the trigger mode.

Returns the current trigger mode as character data.

Example :TRIGger:MODE REPEat

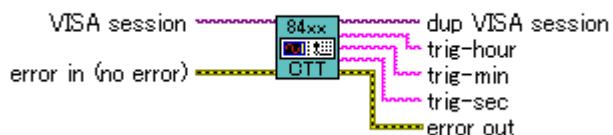

Sets the trigger mode to repeat.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 97
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-70. HIOKI 84series Trig Detecttime.vi

Sets or queries the time point for trigger detection.

**HIOKI 84series Trig Detecttime.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
trig-hour set	[I32]	Specifies the time(hour) for trigger detection Valid range: 0 – 23
trig-min set	[I32]	Specifies the time(minute) for trigger detection Valid range: 0 – 59
trig-sec set	[I32]	Specifies the time(second) for trigger detection Valid range: 0 – 59
trig-hour	[abc]	The result of querying the time(hour) for trigger detection
trig-min	[abc]	The result of querying the time(minute) for trigger detection
trig-sec	[abc]	The result of querying the time(second) for trigger detection

Reference command (the 8423 command.)

(22) Sets and queries the time point for trigger detection.

Syntax      (command)    :TRIGger:DETECTTime A,B,C  
               (query)     :TRIGger:DETECTTime?  
               (response)   A,B,C  
                           A=hour:0 to 23(hour)  
                           B=min :0 to 59(min)  
                           C=sec :0 to 59(sec)  
                           hour,min,sec<NR1>

Explanation   Sets the time point for trigger detection.

Returns the setting for the time point for trigger detection as a numerical value in NR1 format.

Example      :TRIGger:DETECTTime?  
                  The currently set time point for trigger detection is

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 98
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(31) Sets and queries the time point for trigger detection.

Syntax (command) :TRIGger:DETECTTime A,B,C  
 (query) :TRIGger:DETECTTime?  
 (response) A,B,C  
     A=hour:0 to 23(hour)  
     B=min :0 to 59(min)  
     C=sec :0 to 59(sec)  
     hour,min,sec<NR1>

Explanation Sets the time point for trigger detection.  
 Returns the setting for the time point for trigger detection as a numerical value in NR1 format.

Example :TRIGger:DETECTTime?  
 The currently set time point for trigger detection is queried.

Reference command (the LR8410,LR8416 command.)

(21) Sets and queries the time point for trigger detection.

Syntax (command) :TRIGger:DETECTTime A,B,C  
 (query) :TRIGger:DETECTTime?  
 (response) A,B,C  
     A=hour:0 to 23(hour)  
     B=min :0 to 59(min)  
     C=sec :0 to 59(sec)  
     hour,min,sec<NR1>

Explanation Sets the time point for trigger detection.  
 Returns the setting for the time point for trigger detection as a numerical value in NR1 format.

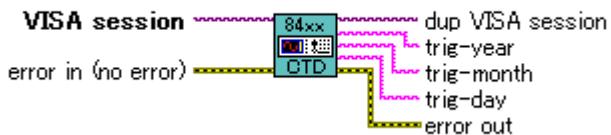

Example :TRIGger:DETECTTime?  
 The currently set time point for trigger detection is queried.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 99
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-71. HIOKI 84series Trig Detectdate.vi

Sets or queries the date for trigger detection.

**HIOKI 84series Trig Detectdate.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
trig-year set	[I32]	Specifies the date(year) for trigger detection Valid range: 0 – 99
trig-month set	[I32]	Specifies the date(month) for trigger detection Valid range: 0 – 12
trig-day set	[I32]	Specifies the date(day) for trigger detection Valid range: 0 – 31
trig-year	[abc]	The result of querying the date(year) for trigger detection
trig-month	[abc]	The result of querying the date(month) for trigger detection
trig-day	[abc]	The result of querying the date(day) for trigger detection

Reference command (the 8423 command.)

(23) Sets and queries the date for trigger detection.

Syntax (command) :TRIGger:DETECTDate A,B,C  
(query) :TRIGger:DETECTDate?  
(response) A,B,C  
A=year :0 to 99(year)  
B=month:1 to 12(month)  
C=day :1 to 31(day)  
year,month,day<NR1>

Explanation Sets the date for trigger detection.

Returns the setting for the date for trigger detection  
as a numerical value in NR1 format.

Example :TRIGger:DETECTDate?

The currently set date for trigger detection is queried.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 100
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(32) Sets and queries the date for trigger detection.

Syntax (command) :TRIGger:DETECTDate A,B,C  
 (query) :TRIGger:DETECTDate?  
 (response) A,B,C  
     A=year :0 to 99(year)  
     B=month:1 to 12(month)  
     C=day :1 to 31(day)  
     year,month,day<NR1>

Explanation Sets the date for trigger detection.  
 Returns the setting for the date for trigger detection as a numerical value in NR1 format.

Example :TRIGger:DETECTDate?  
 The currently set date for trigger detection is queried.

Reference command (the LR8400,LR8416 command.)

(22) Sets and queries the date for trigger detection.

Syntax (command) :TRIGger:DETECTDate A,B,C  
 (query) :TRIGger:DETECTDate?  
 (response) A,B,C  
     A=year :0 to 99(year)  
     B=month:1 to 12(month)  
     C=day :1 to 31(day)  
     year,month,day<NR1>

Explanation Sets the date for trigger detection.  
 Returns the setting for the date for trigger detection as a numerical value in NR1 format.

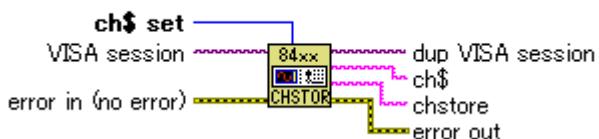

Example :TRIGger:DETECTDate?  
 The currently set date for trigger detection is queried.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 101

#### 4-3-72. HIOKI 84series Memo Chstore.vi

Queries stored record data for each channel.

**HIOKI 84series Memo Chstore.vi**

Name	Data type	Explanation
ch\$ set	<b>U16</b>	Specifies the channel Valid range: CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
chstore	<b>U32</b>	Queries stored record data for each channel 0(OFF),1(ON)

Reference command (the LR8400,LR8401,LR8402 command.)

(3) Queries stored record data for each channel.

Syntax (query) :MEMORY:CHSTore? ch\$  
(response) ch\$,A\$  
ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30  
A\$=OFF(not stored),ON(stored)

Explanation Returns stored record data for each channel as character data.

Example (query) :MEMORY:CHSTore? CH1_1

(response) :MEMORY:CHSTore CH1_1,ON(H HEADER ON)

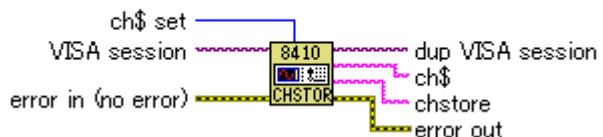

The data of CH1_1 is stored in storage memory.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 102
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-73. HIOKI 84series Memo Chstore_LR8410.vi

Queries stored record data for each channel.

**HIOKI 84series Memo Chstore_LR8410.vi**

Name	Data type	Explanation
ch\$ set	<b>U16</b>	Specifies the channel Valid range: CH1_1 to CH7_15,ALARM,W1 to W30
chstore	<b>U32</b>	Queries stored record data for each channel 0(=OFF),1(=ON)

Reference command (the LR8410,LR8416 command.)

(3) Queries stored record data for each channel.

Syntax (query) :MEMORY:CHSTore? ch\$  
(response) ch\$,A\$  
ch\$=CH1_1 to CH7_15,ALARM,W1 to W30  
A\$=OFF(not stored),ON(stored)

Explanation Returns stored record data for each channel as character data.

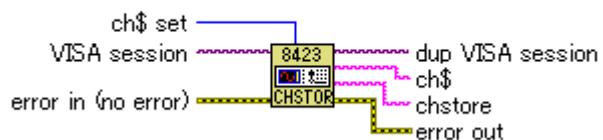

Example (query) :MEMORY:CHSTore? CH1_1  
(response) :MEMORY:CHSTore CH1_1,ON(HEADER ON)  
The data of CH1_1 is stored in storage memory.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 103
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-74. HIOKI 84series Memo Chstore_8423.vi

Queries stored record data for each channel.

**HIOKI 84series Memo Chstore_8423.vi**

Name	Data type	Explanation
ch\$ set	<b>U16</b>	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
chstore	<b>U32</b>	Queries stored record data for each channel 0(OFF),1(ON)

Reference command (the 8423 command.)

(3) Queries stored record data for each channel.

Syntax      (query)      :MEMORY:CHSTore? unit\$,ch\$  
               (response)     unit\$,ch\$,A\$  
                               unit\$=UNIT1 to UNIT8  
                               ch\$=CH1 to CH15  
                               A\$=OFF(not stored),ON(stored)

Explanation    Returns stored record data for each channel as character data.

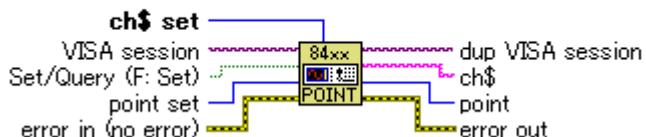

Example        (query) :MEMORY:CHSTore? UNIT1,CH1  
                   (response) :MEMORY:CHSTore UNIT1,CH1,ON(HDR ON)  
                               The data of UNIT1,CH1 is stored in storage memory.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>104</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-75. HIOKI 84series Memo Point.vi

Sets or queries the point in memory for input/output.

**HIOKI 84series Memo Point.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
point set	U32	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 84series Memo Maxpoint.vi)
ch\$	abc	Specified channel
point	U32	The result of querying the point in memory for input/output.

Reference command (the LR8400,LR8401,LR8402 command.)

(1) Sets and queries the point in memory for input/output.

Syntax      (command) :MEMORY:POINT ch\$,A  
               (query) :MEMORY:POINT?  
               (response) ch\$,A<NR1>  
                   ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30  
                   A=0 to 8388607(maximum at only 1 channel)

Explanation    Sets the input/output point in memory.  
                  Returns the current input/output point in memory as an NR1 numerical value.

Example       :MEMORY:POINT CH1_1,100  
               Sets the input/output point for unit1,channel 1-1 to the 100th location from the start of memory.

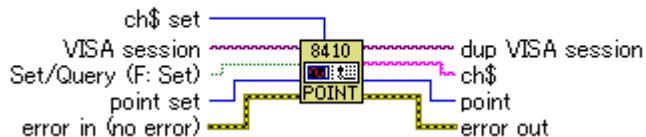

Note           It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 105
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-76. HIOKI 84series Memo Point_LR8410.vi

Sets or queries the point in memory for input/output.

**HIOKI 84series Memo Point_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: CH1_1 to CH7_15,ALARM,W1 to W30
point set	[U32]	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 84series Memo Maxpoint.vi)
ch\$	[abc]	Specified channel
point	[U32]	The result of querying the point in memory for input/output.

Reference command (the LR8410,LR8416 command.)

(1) Sets and queries the point in memory for output.

Syntax	(command) :MEMORY:POINT ch\$,A
	(query) :MEMORY:POINT?
	(response) ch\$,A<NR1> ch\$=CH1_1 to CH7_15,ALARM,W1 to W30 A=0 to 8388607(maximum at only 1 channel)

Explanation Sets the output point in memory.  
Returns the current output point in memory as an NR1 numerical value.

Example :MEMORY:POINT CH1_1,100  
Sets the output point for unit1,channel 1-1 to the 100th location from the start of memory.

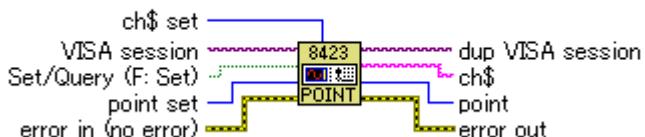

Note It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>106</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-77. HIOKI 84series Memo Point_8423.vi

Sets or queries the point in memory for input/output.

**HIOKI 84series Memo Point_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
point set	[U32]	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 8423 Memo Maxpoint.vi)
ch\$	[abc]	Specified channel
point	[U32]	The result of querying the point in memory for input/output.

Reference command (the 8423 command.)

(1) Sets and queries the point in memory for input/output.

Syntax      (command)    :MEMOrY:POInT unit\$,ch\$,A  
               (query)     :MEMOrY:POInT?  
               (response)   unit\$,ch\$,A<NR1>  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A=0 to 16777215(maximum at only 1 channel)

Explanation   Sets the input/output point in memory.

Returns the current input/output point in memory as an NR1 numerical value.

Example      :MEMOrY:POInT UNIT1,CH1,100

Sets the input/output point for unit1,channel 1 to the 100th location from the start of memory.

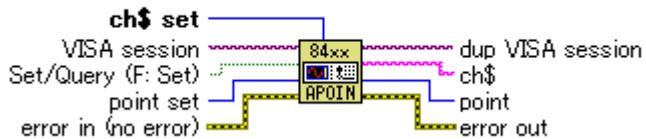

Note          It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>107</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-78. HIOKI 84series Memo Apoint.vi

Sets or queries the point in memory for input/output.  
(when longer data is storaged than the inside memory)

**HIOKI 84series Memo Apoint.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
point set	U32	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 84series Memo Amaxpoint.vi)
ch\$	abc	Specified channel
point	U32	The result of querying the point in memory for input/output.

Reference command (the LR8400,LR8401,LR8402 command.)

(12) Sets and queries the point in memory for input/output.  
(when longer data is storaged than the inside memory)

Syntax (command) :MEMORY:AP0INT ch\$,A  
(query) :MEMORY:AP0INT?  
(response) ch\$,A  
ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30  
A=0 to

Explanation Sets the input/output point in memory.  
Returns the current input/output point in memory as an NR1 numerical value.

Example :MEMORY:AP0INT CH1_1,100  
Sets the input/output point for channel 1-1 to the 100th location from the start of memory.

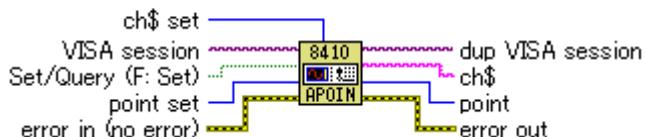

Note It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 108
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-79. HIOKI 84series Memo Apoin_LR8410t.vi

Sets or queries the point in memory for input/output.  
(when longer data is storaged than the inside memory)

**HIOKI 84series Memo Apoint_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: CH1_1 to CH7_15,ALARM,W1 to W30
point set	U32	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 84series Memo Amaxpoint.vi)
ch\$	abc	Specified channel
point	U32	The result of querying the point in memory for input/output.

Reference command (the LR8410,LR8416 command.)

- (11) Sets and queries the point in memory for output.  
(when longer data is stored than the inside memory)

Syntax (command) :MEMORY:AP0INT ch\$,A  
(query) :MEMORY:AP0INT?  
(response) ch\$,A  
ch\$=CH1_1 to CH7_15,ALARM,W1 to W30  
A=0 to

Explanation Sets the output point in memory.  
Returns the current output point in memory as an NR1 numerical value.

Example :MEMORY:AP0INT CH1_1,100  
Sets the output point for channel 1-1 to the 100th location from the start of memory.

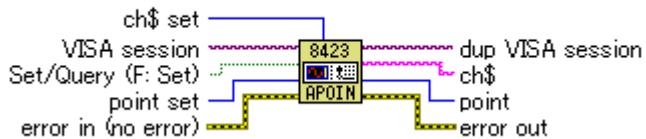

Note It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>109</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-80. HIOKI 84series Memo Apoint_8423.vi

Sets or queries the point in memory for input/output.  
(when longer data is storaged than the inside memory)

**HIOKI 84series Memo Apoint_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	<b>TF</b>	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	<b>U16</b>	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
point set	<b>U32</b>	Specifies the number of points in memory for input/output. (can be set only to a value less than that returned by the HIOKI 84series Memo Amaxpoint.vi)
ch\$	<b>abc</b>	Specified channel
point	<b>U32</b>	The result of querying the point in memory for input/output.

Reference command (the 8423 command.)

(12) Sets and queries the point in memory for input/output.

(when longer data is storaged than the inside memory)

Syntax      (command)    :MEMORY:APOINT unit\$,ch\$,A  
               (query)     :MEMORY:APOINT?  
               (response)   ch\$,A    (no return unit\$)  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A=0 to

Explanation   Sets the input/output point in memory.  
                  Returns the current input/output point in memory as an NR1 numerical value.

Example      :MEMORY:APOINT UNIT1,CH1,100  
                  Sets the input/output point for unit1,channel 1 to the 100th location from the start of memory.

Note          It becomes an execution error, when the channel is not data stored.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 110
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-81. HIOKI 84series Memo Maxpoint.vi

Queries the number of data samples stored.

**HIOKI 84series Memo Maxpoint.vi**

Name	Data type	Explanation
point	U32	The result of querying the number of data samples stored

Reference command (the 8423 command.)

(2) Queries the number of data samples stored.

Syntax (query) :MEMORY:MAXPoint?  
                   (response) A <NR1>  
                          A = 0 : no data stored  
                          1 to 16777215

Explanation Returns the number of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:MAXPoint?  
                   (response) :MEMORY:MAXPoint 800 (when headers are on)  
                          The number of data samples stored in the memory is 800.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) Queries the number of data samples stored.

Syntax (query) :MEMORY:MAXPoint?  
                   (response) A <NR1>  
                          A = 0 : no data stored  
                          1 to 8388608

Explanation Returns the number of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:MAXPoint?  
                   (response) :MEMORY:MAXPoint 800 (when headers are on)  
                          The number of data samples stored in the memory is 800.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 111
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(2) Queries the number of data samples stored.

Syntax (query) :MEMORY:MAXPoint?

(response) A <NR1>

A = 0 : no data stored

1 to 8388608

Explanation Returns the number of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:MAXPoint?

(response) :MEMORY:MAXPoint? 800 (when headers are on)

The number of data samples stored in the memory is 800.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 112
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-82. HIOKI 84series Memo Amaxpoint.vi

Queries the number of data samples stored.  
(when longer data is storaged than the inside memory)

**HIOKI 84series Memo Amaxpoint.vi**

Name	Data type	Explanation
point	<b>U32</b>	The result of querying the number of data samples stored

Reference command (the 8423 command.)

(13) Queries the end of data samples stored.  
(when longer data is storaged than the inside memory)

Syntax (query) :MEMORY:AMAXPoint?  
(response) A  
A = 0 : no data stored  
1 to

Explanation Returns the end of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:AMAXPoint?  
(response) :MEMORY:AMAXPoint 800 (when headers are on)  
The end of data samples stored in the memory is 800.

Reference command (the LR8400,LR8401,LR8402 command.)

(13) Queries the end of data samples stored.  
(when longer data is storaged than the inside memory)

Syntax (query) :MEMORY:AMAXPoint?  
(response) A  
A = 0 : no data stored  
1 to

Explanation Returns the end of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:AMAXPoint?  
(response) :MEMORY:AMAXPoint 800 (when headers are on)  
The end of data samples stored in the memory is 800.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 113
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416 command.)

(12) Queries the end of data samples stored.

(when longer data is stored than the inside memory)

Syntax (query) :MEMORY:AMAXPoint?

(response) A

A = 0 : no data stored

1 to

Explanation Returns the end of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:AMAXPoint?

(response) :MEMORY:AMAXPoint 800 (when headers are on)

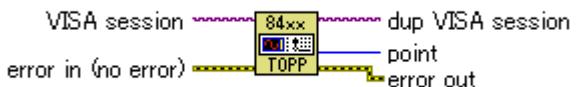

The end of data samples stored in the memory is 800.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 114
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-83. HIOKI 84series Memo Toppoint.vi

Queries the top of data samples stored.  
(when longer data is storaged than the inside memory)

**HIOKI 84series Memo Toppoint.vi**

Name	Data type	Explanation
point	UI32	The result of querying the top of data samples stored

Reference command (the 8423 command.)

(14) Queries the top of data samples stored.  
(when longer data is storaged than the inside memory)

Syntax (query) :MEMORY:TOPPoint?  
(response) A

A = 0 : no data stored  
1 to

Explanation Returns the top of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:TOPPoint?  
(response) :MEMORY:TOPPoint 100 (when headers are on)  
The top of data samples stored in the memory is 100.

Reference command (the LR8400,LR8401,LR8402.command)

(14) Queries the top of data samples stored.  
(when longer data is storaged than the inside memory)

Syntax (query) :MEMORY:TOPPoint?  
(response) A  
A = 0 : no data stored  
1 to

Explanation Returns the top of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:TOPPoint?  
(response) :MEMORY:TOPPoint 100 (when headers are on)  
The top of data samples stored in the memory is 100.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 115
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8410,LR8416.command)

(13) Queries the top of data samples stored.  
(when longer data is stored than the inside memory)

Syntax (query) :MEMORY:TOPPoint?  
(response) A  
A = 0 : no data stored  
1 to

Explanation Returns the top of data samples stored in the memory as a numerical value in NR1 format.

Example (query) :MEMORY:TOPPoint?  
(response) :MEMORY:TOPPoint 100 (when headers are on)  
The top of data samples stored in the memory is 100.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>116</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-84. HIOKI 84series Memo Adata.vi

Inputs data to memory, or outputs stored data.

**HIOKI 84series Memo Adata.vi**

Name	Data type	Explanation
output number	U8	The number of data to output Valid range: 1– 80
adata array	I32	The output of stored data *

* Refer to MEMORY HiLOGGER manual to get details.

Reference command (the 8423 command.)

(5) Inputs data to memory, and outputs stored data.(ASCII)

Syntax	(command) :MEMORY:ADATa B,C,... (query) :MEMORY:ADATa? A (response) B,C,... <NR1> B,C,... =-32768 to 32767(8949,8948 unit data) 0 to 1000000000(8996 unit pulse data) 0,1(8996 unit digital in data) 0,1(8997 unit alarm out data) A=1 to 80(number of data values to be output)
--------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Explanation	Puts the data of the data portion into the memory at the channel and point set by the :MEMORY:POINT command. If there are several data values, they are input in order from the point set by the :MEMORY:POINT command. The input/output point is incremented by the number of data values.
-------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	The number of data values specified by A are output from the memory channel and point set by the :MEMORY:POINT command. The input/output point is incremented by the number of data values.
--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Example	:MEMORY:POINT UNIT1,CH1,0 :MEMORY:ADATa? 10 Sets the input/output point to unit 1,channel 1 and data value zero in memory, then outputs 10 stored data values.
---------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------

When allowed	provided that stored data is present, and provided that the input/output point is lower than the amount of data stored.
--------------	-------------------------------------------------------------------------------------------------------------------------

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 117
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

(5) Inputs data to memory, and outputs stored data.(ASCII)

Syntax (command) :MEMORY:ADATA B,C,...  
 (query) :MEMORY:ADATA? A  
 (response) B,C,... <NR1>  
     B,C,... =-32768 to 32767(CH1_1 to CH4_15)  
     0 to 1000000000(PLS1 to PLS8)  
     0 to 255(LOG)  
     0 to 15(ALARM)  
     wave calc=NR3(W1 to W30)  
     A=1 to 80(number of data values to be output)

Explanation Puts the data of the data portion into the memory at the channel and point set by the :MEMORY:POINT command.  
 If there are several data values, they are input in order from the point set by the :MEMORY:POINT command.  
 The input/output point is incremented by the number of data values.  
 The number of data values specified by A are output from the memory channel and point set by the :MEMORY:POINT command. The input/output point is incremented by the number of data values.

Example :MEMORY:POINT CH1_1,0  
 :MEMORY:ADATA? 10  
 Sets the input/output point to unit 1,channel 1 and data value zero in memory, then outputs 10 stored data values.

Reference command (the LR8410,LR8416 command.)

(4) Outputs data from memory.(ASCII)

Syntax (query) :MEMORY:ADATA? A  
 (response) B,C,... <NR1>  
     B,C,... =-32768 to 32767(CH1_1 to CH7_15)  
     0 to 1000000000(Count, Revolve)  
     0 to 1(Logic)  
     0 to 15(ALARM)  
     wave calc=NR3(W1 to W30)  
     A=1 to 80(number of data values to be output)

Explanation The number of data values specified by A are output from the memory channel and point set by the :MEMORY:POINT command. The output point is incremented by the number of data values.

Example :MEMORY:POINT CH1_1,0  
 :MEMORY:ADATA? 10  
 Sets the output point to unit 1,channel 1 and data value zero in memory, then outputs 10 stored data values.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>118</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-85. HIOKI 84series Memo Vdata.vi

Inputs voltage data to memory, or outputs voltage data from memory.

**HIOKI 84series Memo Vdata.vi**

Name	Data type	Explanation
output number	[U8]	The number of voltage data to output Valid range: 1 to 40
vdata array	[DBL]	The output of voltage data from memory *

* Refer to MEMORY HiLOGGER manual to get details.

Reference command (the 8423 command.)

(6) Input voltage data to memory, and output voltage data from memory.

(volt,tc,rtd,humid,count,revolve)

Syntax	(command) :MEMORY:VDA[Ta] B,C,...
	(query) :MEMORY:VDA[Ta]? A
	(response) B,C,... <NR3>
	B,C,... =volt,tc,rtd,humid(8949,8948 unit data)
	count,revolve(8996 unit pulse data)
	0,1(8996 unit digital in data)
	0,1(8997 unit alarm out data)

A=1 to 40(data num)

Explanation Puts the data values (volt,tc,rtd,humid,count,revolve values) in the data portion into the memory at the channel and point set by the :MEMORY:POINT command.

If there are several data values, they are input in order from the point set by the :MEMORY:POINT command.

The input/output point is incremented by the number of data values.

The number of stored data values specified by A are output as voltage values from the memory channel and point set by the :MEMORY:POINT command.

The input/output point is incremented by the number of data values.

Example :MEMORY:POINT UNIT1,CH1,0  
:MEMORY:VDA[Ta]? 10

Sets the input/output point to channel 1 and data value zero in memory, then outputs 10 stored data values as voltage values.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 119
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

Reference command (the LR8400,LR8401,LR8402 command.)

- (6) Input voltage data to memory, and output voltage data from memory.

(volt,tc,rtd,humid,resist,count,revolve)

Syntax (command) :MEMORY:VDA Ta B,C,...

(query) :MEMORY:VDA Ta? A

(response) B,C,... <NR3>

B,C,... =volt,tc,rtd,humid,resist(CH1_1 to CH4_15 analog

data)

count,revolve(PLS1 to PLS8 pulse data)

0 to 255(LOG digital in data)

0 to 15(ALARM alarm out data)

wave calc(W1 to W30 wave calc data)

A=1 to 40(data num)

Explanation Puts the data values (volt,tc,rtd,humid,resist,count,revolve values) in the data portion into the memory at the channel and point set by the :MEMORY:POINT command.

If there are several data values, they are input in order from the point set by the :MEMORY:POINT command.

The input/output point is incremented by the number of data values.

The number of stored data values specified by A are output as voltage values from the memory channel and point set by the :MEMORY:POINT command.

The input/output point is incremented by the number of data values.

Example :MEMORY:POINT CH1_1,0

:MEMORY:VDA Ta? 10

Sets the input/output point to channel 1-1 and data value zero in memory, then outputs 10 stored data values as voltage values.

Reference command (the LR8410,LR8416 command.)

- (5) Output voltage data from memory.

(volt,tc,rtd,humid,resist)

Syntax (query) :MEMORY:VDA Ta? A

(response) B,C,... <NR3>

B,C,... =volt,tc,rtd,humid,resist,heat,count,revolve,

logic,current,temp,findex,fgrowth

(CH1_1 to CH7_15 analog data)

0 to 15(ALARM alarm out data)

wave calc(W1 to W30 wave calc data)

A=1 to 40(data num)

Explanation The number of stored data values specified by A are output as voltage values from the memory channel and point set by the :MEMORY:POINT command.

The output point is incremented by the number of data values.

When scaling, the scaled values are output.

When calculating the waveform, calculated results are output.

Example :MEMORY:POINT CH1_1,0

:MEMORY:VDA Ta? 10

Sets the output point to channel 1-1 and data value zero in memory, then outputs 10 stored data values as voltage values.

4-3-86. HIOKI 84series Memo Getreal.vi

Captures real time data.

**HIOKI 84series Memo Getreal.vi**

Name	Data type	Explanation
		There is no input and output except common inputs and common outputs

Reference command (the 8423 command.)

(7) Captures real time data.

Syntax (command) :MEMORY:GETReal

Explanation Captures the values which are currently input on the channel for all the channel.

Reference command (the LR8400,LR8401,LR8402 command.)

(7) Captures real time data.

Syntax (command) :MEMORY:GETReal

Explanation Captures the values which are currently input on the channel for all the channel.

Reference command (the LR8410,LR8416 command.)

(6) Captures real time data.

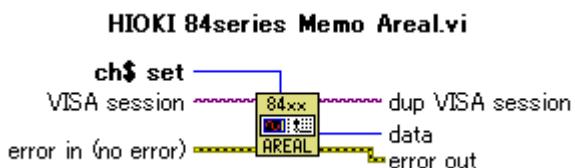

Syntax (command) :MEMORY:GETReal

Explanation Captures the values which are currently input on the channel for all the channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>121</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-87. HIOKI 84series Memo Areal.vi

Outputs real time data (in ASCII)

Name	Data type	Explanation
ch\$ set	<b>U16</b>	Specifies the channel Valid range: CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
adata	<b>I32</b>	The output of real time data

* When the [Captures real time data.] command is not executed before this command,  
the returned value is not fixed.

Reference command (the LR8400,LR8401,LR8402 command.)

(8) Outputs real time data(ASCII)

Syntax      (command)    :MEMORY:AREAI? ch\$  
               (response)   A<NR1>  
                     ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30  
                     A=-32768 to 32767(CH1_1 to CH4_15)  
                     0 to 1000000000(PLS1 to PLS8)  
                     0 to 255(LOG)  
                     0 to 15(ALARM)  
                     wave calc=NR3(W1 to W30)

Explanation   Returns the value input on the channel designated by ch\$.

Example      :MEMORY:AREAI? CH1_1  
                  :MEMORY:AREAI? 2000(H HEADER ON)

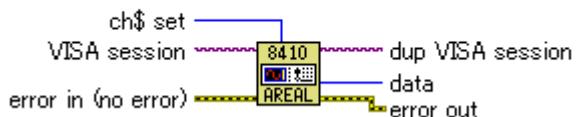

Note          When the :MEMORY:GETReal command is not executed before  
this command, the returned value is not fixed.

BACKGROUND		

4-3-90. HIOKI 84series Memo Vreal.vi

Outputs real time data (voltage values).

**HIOKI 84series Memo Vreal.vi**

Name	Data type	Explanation
ch\$ set	[U16]	Specifies the channel Valid range: CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
vdata	[DBL]	The output of real time data (unit: V, °C)

* When the [Captures real time data.] command is not executed before this command, the returned value is not fixed.

**Reference command** (the LR8400,LR8401,LR8402 command.)

(9) Outputs real time data. (volt,tc,rtd,humid,resist,count,revolve)

Syntax	(command) :MEMORY:VREAL? ch\$
	(response) A<NR3>
	ch\$=CH1_1 to CH4_15,PLS1 to PLS8,LOG,ALARM,W1 to W30
	A=volt,tc,rtd,humid,resist(CH1_1 to CH4_15 analog data)
	count,revolve(PLS1 to PLS8 pulse data)
	0 to 255(LOG digital in data)
	0 to 15(ALARM alarm out data)
	wave calc(W1 to W30 wave calc data)

Explanation Returns as a voltage value the value input on the channel designated by ch\$.

Example :MEMORY:VREAL? CH1_1  
:MEMORY:VREAL 4.7E-2(H HEADER ON)

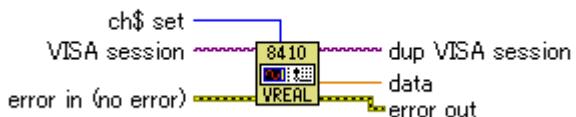

Note When the :MEMORY:GETReal command is not executed before this command, the returned value is not fixed.

#### 4-3-97. HIOKI 84series Scal Set.vi

Sets or queries the Scaling Kind.

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Scal set	[<>]	Specifies the Scaling Kind. 0(=OFF),1(=ENG),2(=SCI)
ch\$	[abc]	Specified channel
Scal	[abc]	The result of querying the Scaling Kind.

Reference command (the LR8400,LR8401,LR8402 command.)

(2) Sets and queries the scaling kind.

Syntax	(command) :SCALing:SET ch\$,A\$
	(query) :SCALing:SET? ch\$
	(response) ch\$,A\$
	ch\$=CH1_1 to CH4_15,PLS1 to PLS8
	A\$=OFF,ENG,SCI
	(ENG=Dec,SCI=Exp)

Explanation Sets the scaling kind designated by ch\$.  
Returns the current scaling kind designated by ch\$ as a character string.

Example :SCALing:SET CH1_1,ENG  
Sets the scaling kind for channel 1-1 to ENG(=Dec).

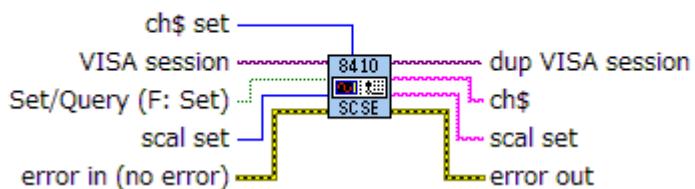

Note CH1_1 to CH4_15 is effective only when LR8501 Universal Unit  
or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 132
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

4-3-98. HIOKI 84series Scal Set_LR8410.vi

Sets or queries the Scaling Kind.

**HIOKI 84series Scal Set_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[UI16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Scal set	[UI16]	Specifies the Scaling Kind 0(=OFF),1(=ENG),2(=SCI)
ch\$	[abc]	Specified channel
Scal	[abc]	The result of querying the Scaling Kind

Reference command (the LR8410 command.)

(2) Sets and queries the scaling kind.

Syntax      (command)    :SCALing:SET ch\$,A\$  
               (query)     :SCALing:SET? ch\$  
               (response)   ch\$,A\$  
                           ch\$=CH1_1 to CH7_15  
                           A\$=OFF,ENG,SCI  
                           (ENG=Dec,SCI=Exp)

Explanation   Sets the scaling kind designated by ch\$.  
               Returns the current scaling kind designated  
               by ch\$ as a character string.

Example      :SCALing:SET CH1_1,ENG

Sets the scaling kind for channel 1-1 to ENG(=Dec).

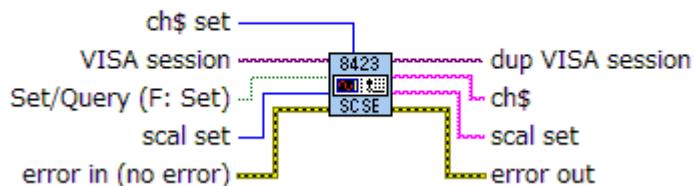

Note          It is effective only when LR8511 Wireless Universal Unit  
               or LR8510 Wireless Volt/Temp Unit's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>133</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

4-3-99. HIOKI 84series Scal Set_8423.vi

Sets or queries the Scaling Kind.

**HIOKI 84series Scal Set_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Scal set	[<>]	Specifies the Scaling Kind 0(=OFF),1(=ENG),2(=SCI)
ch\$	[abc]	Specified channel
Scal	[abc]	The result of querying the Scaling Kind

Reference command (the 8423 command.)

(2) Sets and queries the scaling kind.

Syntax      (command)    :SCALing:SET unit\$,ch\$,A\$  
               (query)     :SCALing:SET? unit\$,ch\$  
               (response)   unit\$,ch\$,A\$  
                           unit\$=UNIT1 to UNIT8  
                           ch\$=CH1 to CH15  
                           A\$=OFF,SCI,ENG

Explanation   Sets the scaling kind designated by unit\$,ch\$.  
                  Returns the current scaling kind designated  
                  by unit\$,ch\$ as a character string.

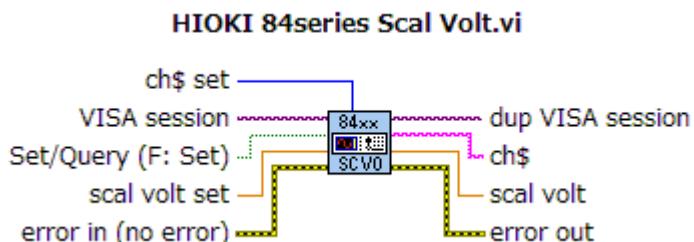

Example      :SCALing:SET UNIT1,CH1,ENG  
                  Sets the scaling kind for unit 1,channel 1 to ENG.

Note          This command is effective only when 8949 Universal Unit  
                  or 8948 Voltage/Temp Unit  
                  or 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b> <b>HIOKI 84series</b> <b>Labview Driver Manual (English)</b>	PAGE <b>134</b>
BACKGROUND		

#### 4-3-100. HIOKI 84series Scal Volt.vi

Sets or queries the scaling conversion value.

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	UI16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Scal volt set	DBL	Specifies the scaling conversion value
ch\$	abc	Specified channel
Scal volt	DBL	The result of querying the scaling conversion value

Reference command (the LR8400,LR8401,LR8402 command.)

(3) Sets and queries the scaling conversion value.

Syntax (command) :SCALING:VOLT ch\$,A  
                   (query) :SCALING:VOLT? ch\$  
                   (response) ch\$,A<NR3>  
                           ch\$=CH1_1 to CH4_15, PLS1 to PLS8  
                           A=-9.9999E+9 to +9.9999E+9

Explanation Sets the scaling conversion value for the channel designated by ch\$.

Returns the current scaling conversion value setting for the channel designated by ch\$ as an NR3 numerical value.

Example :SCALING:VOLT CH1_1,+2.0E-3

Sets the scaling conversion value (eu/V) for channel 1-1 to +2. 0E-3.

When allowed when the conversion scaling is set to RATIO.

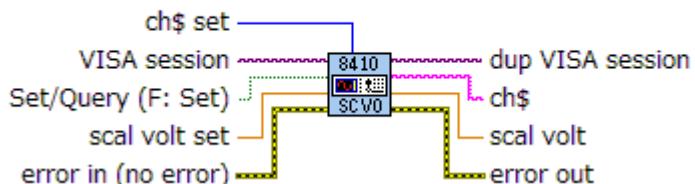

Note CH1_1 to CH4_15 is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>135</b>
BACKGROUND	<b>HIOKI 84series Labview Driver Manual (English)</b>	

#### 4-3-101. HIOKI 84series Scal Volt_LR8410.vi

Sets or queries the scaling conversion value.

**HIOKI 84series Scal Volt_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Scal volt set	[DBL]	Specifies the scaling conversion value
ch\$	[abc]	Specified channel
Scal volt	[DBL]	The result of querying the scaling conversion value

Reference command (the LR8410,LR8416 command.)

(3) Sets and queries the scaling conversion value.

Syntax (command) :SCALING:VOLT ch\$,A  
                   (query) :SCALING:VOLT? ch\$  
                   (response) ch\$,A<NR3>  
                           ch\$=CH1_1 to CH7_15  
                           A=-9.9999E+9 to +9.9999E+9

Explanation Sets the scaling conversion value for the channel designated by ch\$.

Returns the current scaling conversion value setting for the channel designated by ch\$ as an NR3 numerical value.

Example :SCALING:VOLT CH1_1,+2.0E-3  
                   Sets the scaling conversion value (eu/V) for channel 1-1 to +2. 0E-3.

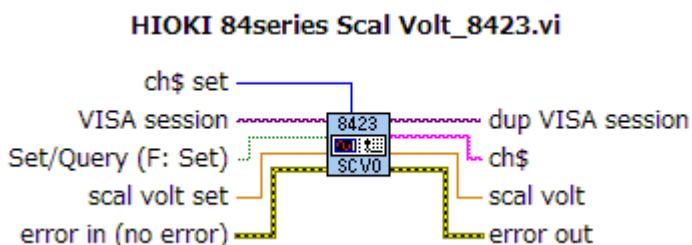

When allowed when the conversion scaling is set to RATIO.

Note It is effective only when LR8511 Wireless Universal Unit or LR8510 Wireless Volt/Temp Unit's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>136</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-102. HIOKI 84series Scal Volt_8423.vi

Sets or queries the scaling conversion value

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range: False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Scal volt set	DBL	Specifies the scaling conversion value
ch\$	abc	Specified channel
Scal volt	DBL	The result of querying the scaling conversion value

Reference command (the 8423 command.)

(3) Sets and queries the scaling conversion value.

Syntax	(command) :SCALing:VOLT unit\$,ch\$,A (query) :SCALing:VOLT? unit\$,ch\$ (response) unit\$,ch\$,A<NR3> unit\$=UNIT1 to UNIT8 ch\$=CH1 to CH15 A=-9.9999E+9 to +9.9999E+9
--------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Explanation Sets the scaling conversion value for the channel designated by unit\$,ch\$.

Returns the current scaling conversion value setting for the channel designated by unit\$,ch\$ as an NR3 numerical value.

Example :SCALing:VOLT UNIT1,CH1,+2.0E-3  
Sets the scaling conversion value (eu/V) for unit 1,channel 1 to +2.0E-3.

When allowed when the conversion scaling is set to RATIO.

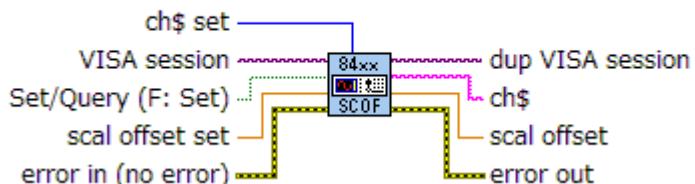

Note This command is effective only when 8949 Universal Unit  
or 8948 Voltage/Temp Unit  
or 8996 Digital/Pulse Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE <b>137</b>
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-103. HIOKI 84series Scal Offset.vi

Sets or queries the scaling offset.

**HIOKI 84series Scal Offset.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 59(=CH4_15)
Scal offset set	DBL	Specifies the scaling offset
ch\$	abc	Specified channel
Scal offset	DBL	The result of querying the scaling offset

Reference command (the LR8400,LR8401,LR8402 command.)

(4) Sets and queries the scaling offset.

Syntax (command) :SCALing:OFFSet ch\$,A  
                   (query) :SCALing:OFFSet? ch\$  
                   (response) ch\$,A<NR3>  
                           ch\$=CH1_1 to CH4_15, PLS1 to PLS8  
                           A=-9.9999E+9 to +9.9999E+9

Explanation Sets the scaling offset for the channel designated by ch\$. Returns the current scaling offset for the channel designated by ch\$ as an NR3 numerical value.

Example :SCALing:OFFSet CH1_1,+1.0E-3  
                   Sets the scaling offset (eu offset) for channel 1-1 to +1. 0E-3.

When allowed when the conversion scaling is set to RATIO.

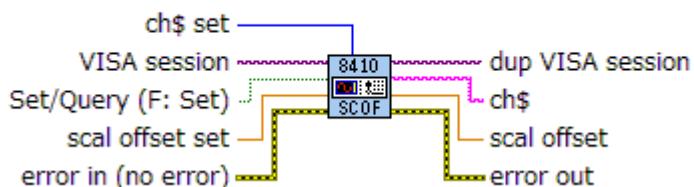

Note CH1_1 to CH4_15 is effective only when LR8501 Universal Unit or LR8500 Volt/Temp Unit.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 138
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-3-104. HIOKI 84series Scal Offset_LR8410.vi

Sets or queries the scaling offset.

**HIOKI 84series Scal Offset_LR8410.vi**

Name	Data type	Explanation
Set/Query(F:Set)	TF	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	U16	Specifies the channel Valid range: 0(=CH1_1) to 104(=CH7_15)
Scal offset set	DBL	Specifies the scaling offset
ch\$	abc	Specified channel
Scal offset	DBL	The result of querying the scaling offset

Reference command (the LR8410,LR8416 command.)

(4) Sets and queries the scaling offset.

Syntax (command) :SCALing:OFFSet ch\$,A  
                   (query) :SCALing:OFFSet? ch\$  
                   (response) ch\$,A<NR3>  
                           ch\$=CH1_1 to CH7_15  
                           A=-9.9999E+9 to +9.9999E+9

Explanation Sets the scaling offset for the channel designated by ch\$.  
                   Returns the current scaling offset for the channel  
                   designated by ch\$ as an NR3 numerical value.

Example :SCALing:OFFSet CH1_1,+1.0E-3

Sets the scaling offset (eu offset) for channel 1-1 to +1. 0E-3.

When allowed when the conversion scaling is set to RATIO.

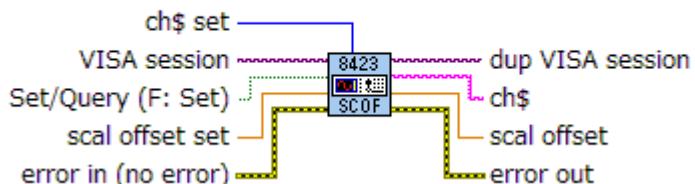

Note It is effective only when LR8511 Wireless Universal Unit  
                   or LR8510 Wireless Volt/Temp Unit's registered channel.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b> <b>HIOKI 84series Labview Driver Manual (English)</b>	PAGE <b>139</b>
BACKGROUND		

#### 4-3-105. HIOKI 84series Scal Offset_8423.vi

Sets or queries the scaling Offset

**HIOKI 84series Scal Offset_8423.vi**

Name	Data type	Explanation
Set/Query(F:Set)	[TF]	Selects the setting or the querying function Valid range; False(=set: Default), True(=Query)
ch\$ set	[U16]	Specifies the channel Valid range: 0(=UNIT1,CH1) to 119(=UNIT8,CH15)
Scal offset set	[DBL]	Specifies the scaling offset
ch\$	[abc]	Specified channel
Scal offsett	[DBL]	The result of querying the scaling offset

Reference command (the 8423 command.)

(4) Sets and queries the scaling offset.

Syntax	(command) :SCALing:OFFSet unit\$,ch\$,A (query) :SCALing:OFFSet? unit\$,ch\$ (response) unit\$,ch\$,A<NR3>
	unit\$=UNIT1 to UNIT8 ch\$=CH1 to CH15 A=-9.9999E+9 to +9.9999E+9

Explanation Sets the scaling offset for the channel designated by unit\$,ch\$.

Returns the current scaling offset for the channel designated by unit\$,ch\$ as an NR3 numerical value.

Example :SCALing:OFFSet UNIT1,CH1,+1.0E-3

Sets the scaling offset (eu offset) for unit 1,channel 1 to +1. 0E-3.

When allowed when the conversion scaling is set to RATIO.

Note This command is effective only when 8949 Universal Unit  
or 8948 Voltage/Temp Unit  
or 8996 Digital/Pulse Unit.

4-4. The VI which is not in the program library.

#### 4-4-1. HIOKI 84Series Initialize.vi

Opens the VISA session, Initializes the interface or the MEMORY HiLOGGER.

**HIOKI 84series Initialize.vi**

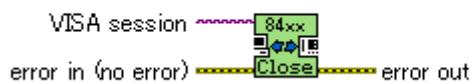

Name	Data type	Explanation
dup VISA session error in error out		The inputs and output are the same as the ones of the VI which is in the program library.
Instrument Descriptor (GPIP...)		Specifies the resource name of unit.  The form:  TCP/IP  TCPIP[number]:ip address::port number::SOCKET  USB  COM[number]
ID Query		Identifies the ID of unit.  Valid range: False, True(Default).
Reset		Resets the unit.  Valid range: False, True(Default).

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 141
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-4-2. HIOKI 84series Close.vi

Closes the VISA session.

**HIOKI 84series Close.vi**

Name	Explanation
dup VISA session error in error out	The inputs and output are the same as the ones of the VI which is in the program library.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 142
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-4-3. Wait.vi

Sets the waiting time.

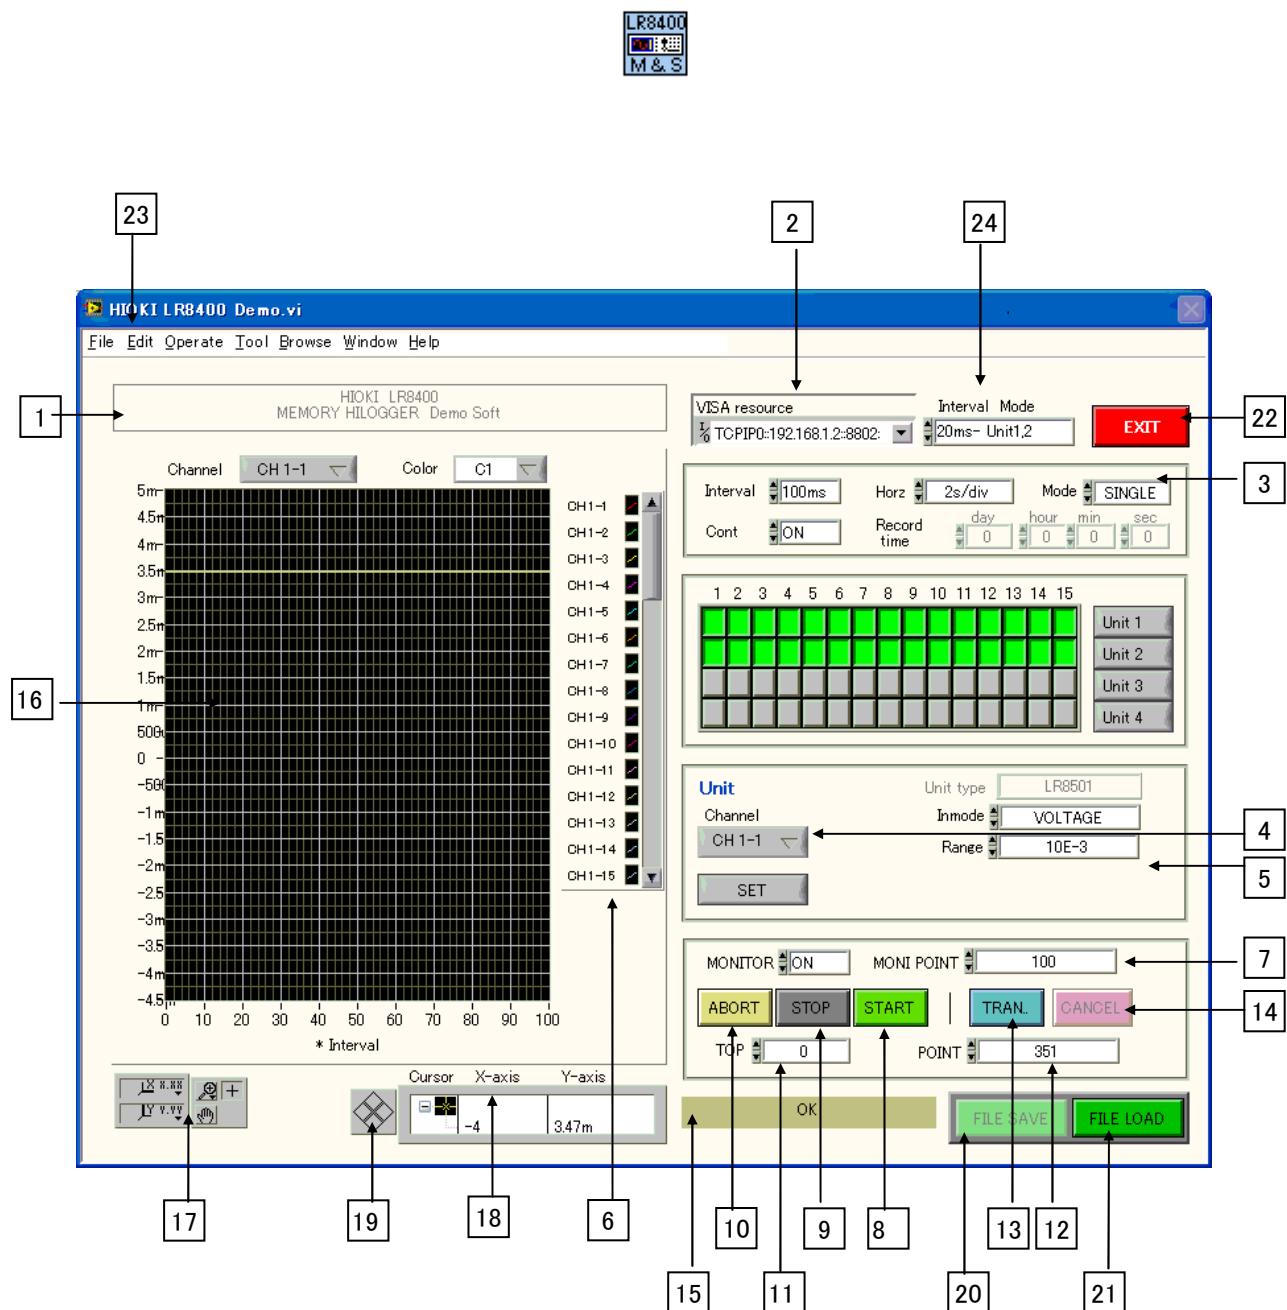

Name	Data type	Explanation
times(ms)	<b>U16</b>	Specifies the waiting time (unit: ms)

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 143
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

#### 4-4-4 HIOKI 84series DEMO_LR8400.vi

It is a demo program for LR8400,LR8401,LR8402 MEMORY HiLOGGER

**HIOKI LR8400 Demo.vi**

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 144
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

No	Function
1	It is a title.
2	Sets the TCPIP(LAN) or USB(COM)
3	(1) Shows and sets the Time Interval. (2) Shows and sets recording Time.
4	Sets the Channel Number.
5	Sets and queries items about channel. (1) RangeCH: Specified the channel. (2) Kind of unit: Shows the kind of unit. (3) Range: Shows and Specifies voltage axis range. (Unit: V, °C, Refer to LR8400 MEMORY HiLOGGER manual to get details.) ( It is necessary to press the SET button if the items have been specified.)
6	Sets the color of wave, and so on. Note: It is a standard function of LabVIEW
7	Sets the Graph Plot at START. MONITOR:OFF (Do not Graph Plot at START.) MONITOR:ON (Do Graph Plot of the newest data set up by MONI POINT at START.)
8	Performs starting (Same as the START key of the unit).
9	Performs stopping (Same as the STOP key of the unit).
10	Aborts processing
11	Sets start point for transmitting
12	Set the transmitting points of data
13	Transmits data
14	Cancels transmission.
15	Shows the performing condition of this program.
16	Shows Waveform Graph.
17	Changes the graph (enlargement, and so on) Note: It is a standard function of LabVIEW
18	Sets the kind of cursor, and so on. Note: It is a standard function of LabVIEW.
19	Moves the cursor. Note: It is a standard function of LabVIEW.
20	Saves data in a file. Note: It is invalid when there is no data in the graph.
21	Reads saved data from a file.
22	Exits this program
23	It is a menu Note: It is a standard function of LabVIEW
24	Time Interval Mode(Use Unit Mode) 10ms- Unit1: Only in the unit 1, the measurement from 10ms is possible. 20ms- Unit1,2: Only in the unit 1,2, the measurement from 20ms is possible. 50ms- Unit1,2,3,4: In the unit 1,2,3,4 the measurement from 50ms is possible.

DOCUMENT No.	TITLE <b>LR8410 WIRELESS LOGGING STATION, LR8416 HEAT FLOW LOGGER</b> <b>LR8400,LR8401,LR8402,8423 MEMORY HiLOGGER</b>	PAGE 145
BACKGROUND	HIOKI 84series <b>Labview Driver Manual (English)</b>	

The process of transmitting data from unit.

1. Opens the HIOKI 84series DEMO_LR8400.vi.
2. Sets the TCPIP(LAN) or USB(COM) address.
3. Runs the HIOKI 84series DEMO_LR8400.vi.
4. Sets necessary items for LR8400 MEMORY HiLOGGER.
5. Sets transmitting channel.
6. Presses the START button and Presses the STOP button, then presses the TRAN. Button.
7. In Demo Program, scaling does not start a measurement voltage value. For acquiring the measurement voltage value which required scaling, it is :MEMORY:ADATa? Please use :MEMORY:VDA Ta? that there is nothing then. In this case, a data transfer rate will become slow 3 times.

Note:

The maximum transmitting points of data is set to 100001.

It is necessary to set the header to OFF before running HIOKI 84series DEMO_LR8400.vi

All the button are invalid except for FILE LOOD button(FILE SAVE button/EXIT button, when there is a error in communication).

All the button are invalid except for CANNEL button, when the No15 is displaying "Transmitting".

All the button are invalid except for ABORT button/STOP button/EXIT button/TRANS button, when the No15 is displaying "Storing".

The FILE SAVE button is invalid when there is no data in the graph.

It can be aborted if the Ctrl key and the . key are pressed at the same time.

It is necessary to close LabVIEW then perform 1-6 if the HIOKI 84series DEMO_LR8400.vi is aborted or the VISA of LabVIEW is in error, before running the HIOKI 84series DEMO_LR8400.vi again.

The top data number which remains in the internal memory, and the data number of an end are displayed No.15 like "Storing 0-1000" the case where data is acquired by "TRANS" during measurement.

When a top data number is not 0, it is in the state which has overwritten data new to the oldest data of an internal memory. in this case -- the data number specified by TOP -- first number + the number of data for about ten seconds. if it does not do so, it will be displayed, as the acquired data may be returned by the data of zero of 16-bit A/D and the waveform displayed shook off to the direction under a screen.

(Although the number of data for 10 seconds is added by this DEMO soft in consideration of the above, please increase, when insufficient.)

Since the ABORT key and the STOP key are hard coming to be effective when MONITOR is turned ON, in that case, please turn OFF MONITOR and use it.

LR8400 can be measured in the units 1, 2, 3, and 4 from 50 ms, which can measure only the units 1 and 2 in 20ms, which can measure only the unit 1 in 10ms.

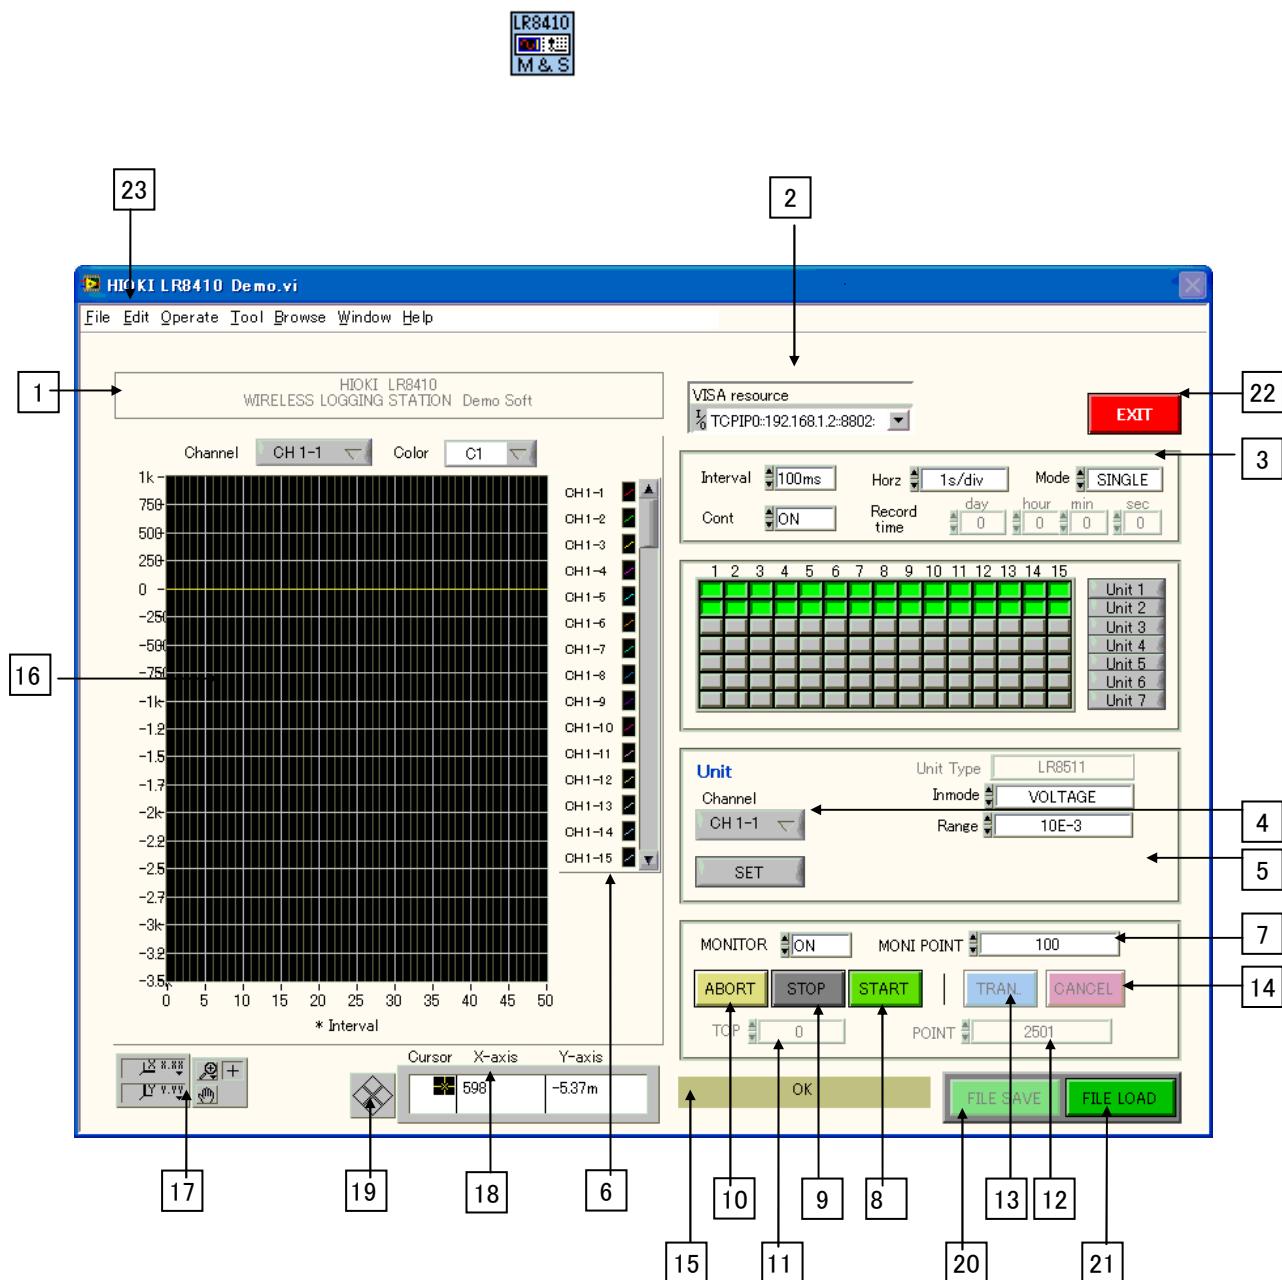

Please perform HIOKI 84series DEMO_LR8400.vi after setting up such record interval modes (use unit mode) by Interval Mode.
