

Analyze the Effects of Rooftop Gardening

Measure the temperature and humidity to verify the effect of rooftop gardening.

■ Highlights

- Record temperature and humidity values before and after rooftop gardening with a temperature and humidity logger LR5001 and verify the effects.
- The measured data can be transferred to a PC and displayed in graph format (a communication adapter LR5091 is required for data transfer).
- Rooftop gardening effects can be visualized by comparing temperature changes during a day.
