The Resistance Meters RM3544/RM3548 can measure the winding resistance of devices such as motors and transformers, the contact resistance of power contacts (relays and switches), and the DC resistance of fuses, resistors, and substrates such as conductive rubber and sheets. It does so quickly and at a high level of accuracy using four-terminal measurement. The RM3544 is well suited to use for adjustment and testing on production lines as well as acceptance inspections, while the RM3548 comprises a portable solution for measuring resistance values ranging in magnitude from microohms to megohms, making it ideal for use in production, maintenance, repair and operation of large equipment.
Perform resistance measurement with an ideal combination of equipment depending on your component or equipment and test conditions.

**Applications**
- Motors, solenoids, choke coils, transformers, wire harnesses
- Contacts, wire harnesses, relay contacts, switches
- Conductive rubber, paint
- Fuses, resistors, heaters, wires, welds
- Large motors, large transformers
- Temperature rise tests (Motors, choke coils, transformers)
- Vehicle grounding lines, conductivity of aircraft fuselages

**Probes suited to manual measurement on production lines**
- CLIP TYPE LEAD L2101
- 4-TERMINAL LEAD L2104
- PIN TYPE LEAD L2102
- PIN TYPE LEAD L2103

**Probes suited to DC measurement of the chassis and bodies of large equipment**
- CLIP TYPE LEAD L2107
- 4-TERMINAL LEAD 9453
- PIN TYPE LEAD 9465-10
- LARGE CLIP TYPE LEAD 9467
- PIN TYPE LEAD 9772

**A Full Line-up of HIOKI Resistance Meters to Suit Your Measurement Range**
- 1μΩ: RM3544/RM3544-01
- 0.1μΩ: RM3548
- 0.01μΩ: RM3545
- 0.01μΩ: RM3543
- 0.1μΩ: RM3542
- 1μΩ: SM7120

- 3.5MΩ: RM3548
- 1200MΩ: RM3545
- 120MΩ: RM3543
**High-accuracy bench-top resistance meter**
for both manual operation and integration with automatic lines

**High-accuracy portable resistance meter**
measures from µΩ to MΩ

---

**RESISTANCE METER RM3544/RM3544-01**

- **Basic accuracy**: 0.02%
- **Max. resolution**: 1µΩ
- **Max. measurable current**: 300mA
  - Measure from 0.000 mΩ (@ 300 mA) to 3.5 MΩ
  - Probe for guard jack use and increased measurement current yield an instrument that’s more resistant to noise.
  - Optional LED COMPARATOR ATTACHMENT and high-volume judgment tones combine to ensure PASS/FAIL judgments are communicated reliably in the noisy environment of the production floor.
  - EXT I/O interface with NPN/PNP support can accommodate a variety of automated production lines (-01 model).

---

**RESISTANCE METER RM3548**

- **Basic accuracy**: 0.02%
- **Max. resolution**: 0.1µΩ
- **Max. measurable current**: 1A
  - Measure from 0.0 µΩ (@ 1 A) to 3.5 MΩ
  - Easily record up to 1,000 data points in memory simply by applying the instrument’s probes.
  - Smoothly capture temperature-rise test data using interval measurement.
  - Portable design is ideal for maintenance and testing of large equipment.

---

**Temperature correction**

Generally, the resistance of copper wiring changes with temperature by 0.4% per degree Celsius. The RM3544/RM3544-01/RM3548 provides a temperature correction function to convert the observed resistance value \( R_t \) at the current temperature \( t \) to the resistance value \( R_{t0} \) at the reference temperature \( t_0 \).

*Requires temperature sensor (Z2001 or Z2002).

Reference temperature setting range: -10 °C to 99.9 °C
Temperature coefficient setting range: -9,999 ppm to +9,999 ppm
Easy-to-use RESISTANCE METER
suits both manual operation and integration with automatic lines

Features

- Simple, intuitive functions, screens, and operation for applications, including on production lines and in acceptance inspections
- High-durability probes with guard jack and increased measurement current for noise-resistant*1 measurement
- Quickly identifiable PASS/FALSE judgments with sound and light

High-precision specs in a compact package

- Convenient range options
  Measure from 0.000 mΩ to 3.5000 MΩ
  1μΩ max. resolution, 0.02% basic accuracy
  Max. measurable current of 300mA

  As inverter-equipped power supply equipment uses increasingly high currents and frequencies, increasingly low-resistance and low-loss inductors are being used in their circuitry, prompting a need for the ability to measure lower resistance levels with a high level of stability. With a resolution of 1 μΩ, the RM3544/RM3544-01 satisfies these needs.

  Electronic components make extensive use of high-resistance substrates such as conductive sheets and rubber, and the RM3544/RM3544-01 delivers the ability to measure up to 3.5 MΩ.

  Moreover, the instrument’s maximum accuracy of 0.02% allows it to be used in testing current detectors with a precision of 0.1%.

- Footprint of just 215 × 166 mm

  Compared to previous the previous model (HIOKI 3540), the RM3544/RM3544-01 takes up approximately 25% less installation space. The smaller footprint creates work space in front of the instrument, and its compact size allows it to be easily and unobtrusively embedded in other equipment.

- No warmup period or zero adjustment

  The RM3544/RM3544-01 has no warmup time, meaning it’s ready to use for measurement as soon as you turn it on. Accuracy is guaranteed immediately after the instrument is powered up (assuming temperature and humidity conditions that satisfy the accuracy guarantee conditions).

- High-durability probes

  HIOKI offers a line of probes designed to accommodate the full range of measurement targets. Flex resistance has been dramatically improved (based on HIOKI comparisons).
Advanced functionality that’s as easy to use as it is easy to understand

- **Measurement jacks with guard jack**
  By connecting a probe to the guard jack, you can minimize the effects of external noise on measurements.

- **Simple control over basic settings**
  Range and measurement speed can be controlled directly.

- **Loud, user-selectable judgment tones**
  High-volume judgment tones of at least 85 dB inform the operator of test results, ensuring that they remain audible even in the vicinity of noisy machinery. The ability to choose from various tones ensures operators won’t confuse judgment results on lines where multiple RM3544 units are in use.

- **LED COMPARATOR ATTACHMENT (Option)**
  The LED Comparator Attachment indicates judgment results with green and red LEDs, eliminating the need to look at the instrument’s screen and increasing work efficiency. Since the lamps do not light up when the measurement leads are open, the attachment can also be used to verify the connection status.

  - Green light: IN state
  - Red light: HI/LO state

- **Material- and temperature-independent temperature correction function**
  The temperature correction function can be used to convert resistance values that vary with the ambient temperature to a reference value at a reference temperature using the Temperature Sensor Z2001 and a user-specified resistance temperature coefficient.

- **Scaling**
  The scaling function can be used to convert resistance values into physical properties such as length.
  Conversion formula: \( Rs = A \times R + B \)
  \( A, B \): Constants, \( R \): Measurement value, \( Rs \): Resistance value

- **Panel save and load functionality for up to 10 sets of parameters**
  Panel save and load functionality provides the ability to save and subsequently load up to 10 sets of instrument setting conditions for range, comparator, and other parameters. Naming each set of panel data lets you make setup changes among production lots and lines smoothly and effortlessly.

- **Comparator Function**
  The comparator function compares measured values to a previously set reference value or range and then displays and outputs the judgment result. The RM3544-01 can also output comparator results via its EXT I/O interface.

- **Intuitive, graphical LCD**
  Scaling
  The scaling function can be used to convert resistance values into physical properties such as length.

  Conversion formula: \( Rs = A \times R + B \)

  \( A, B \): Constants, \( R \): Measurement value, \( Rs \): Resistance value

  - Green light: IN state
  - Red light: HI/LO state
Acquiring measurement results (data) (RM3544-01)

RM3544-01 rear panel

- **Connecting the instrument to a computer via RS-232C or USB**
  - The full range of RM3544-01 functionality can be controlled from a computer, which can also be used to acquire measurement results. (This capability does not include turning the instrument on and off or configuring certain interface settings.)
  - By connecting the instrument to a commercially available RS-232C printer, it can print measured values, including judgment results.
  - Measured values can be automatically output. By using the instrument’s USB keyboard mode, measured values can be entered into applications such as spreadsheets and text editors without the need to install a special USB driver in the computer.
  - The sample PC application provides functionality for capturing data based on trigger signals, performing interval measurement, conducting communication tests, and loading captured data into Microsoft® Excel or outputting it as a CSV file. The application can be downloaded from Hioki’s website (http://www.hioki.com).

- **Communications monitor function for smooth system development**
  The communications monitor function displays communications data (received commands and sent data) on the screen, providing valuable support for programming of programmable logic controllers (PLCs).

- **Universal power supply for robust accommodation of supply voltage fluctuations and automatic power supply frequency detection (RM3544/RM3544-01)**
  Measuring in sync with the power line frequency is important for achieving accurate measurements. To avoid measurement problems due to incorrect settings, the power line frequency is automatically sensed and selected (50 or 60 Hz). The universal AC input (90 to 264 V) is practically unaffected by voltage fluctuations, so stable measurements are possible even in poor power environments.

*The RM3544 does not include EXT I/O or communications interfaces (RS-232C or USB).*
Easy integration into automatic testing equipment (RM3544-01)

High-speed, comprehensive productivity support

- The RM3544-01 delivers the speed demanded by automatic testing equipment at a sophisticated level. The entire process from the start of measurement to outputting of the judgment result takes as little as 18 ms. One cycle of operation, lasting from measurement to judgment output, completes within this time.
- The RM3544-01 supports RS-232C data communications at up to 115.2 kbps.
- The instrument’s USB interface can also be used.
- The EXT I/O output mode can be switched between judgment mode and BCD mode.

Functionality for verifying the EXT I/O connection status and testing EXT I/O

In addition to allowing you to check EXT I/O signal input on the instrument's screen, this functionality allows you to turn output signals on or off as desired. This capability simplifies verification work during PLC programming.

Handler (EXT I/O) interface

The handler interface (EXT I/O) is isolated from measurement circuitry, control circuitry, and the protective ground (chassis ground), providing a high level of noise resistance.

Example of Typical EXT I/O Timing (EOM output hold)

- Measurement time

<table>
<thead>
<tr>
<th>50Hz</th>
<th>60Hz</th>

</thead>
<tbody>
<tr>
<td>FAST</td>
<td>21</td>
</tr>
<tr>
<td>MED</td>
<td>101</td>
</tr>
<tr>
<td>SLOW</td>
<td>401</td>
</tr>
</tbody>
</table>

*1 With TC set to ON and the comparator set to ON

Example of Typical EXT I/O Timing (EOM output hold)

- Trigger pulse ON time (0.1 ms or more)
- Measurement start time (max. 1 ms)
- Capture processing time : FAST(50Hz): 16.7 ms, MEDIUM: 100 ms, SLOW: 400 ms
- Calculation time : 1 ms

EXT I/O Input and Output Circuits

A switch on the rear panel is used to toggle the input signal polarity between NPN (sink output support) and PNP (source output support) settings depending on the PLC common polarity.

EXT I/O Electrical Specifications

- Inputs:
  - Photocoupler isolation: Non-voltage contact inputs (support for current sink output)
  - Input ON: Residual voltage: Max. 1 V @4 mA
  - Input OFF: Open Max. 100 µA

- Outputs:
  - Photocoupler-isolated open drain output (no-polarity)
  - DC30V max, DC50mA max/ch
  - Residual voltage: Max. 1 V @50 mA, or 0.5 V @10 mA

- External power output:
  - Output voltage: Sink output support: 5.0V±10%, Source output support: -5.0V±10%
  - Max. output current: 100mA
High-accuracy portable RESISTANCE METER
measures from $\mu\Omega$ to M$\Omega$

Features

- High-precision specs in a portable package (high accuracy of 0.02% rdg.)
- Design is ideal for maintenance and testing/measurement of large equipment.
- No warmup period or zero adjustment required.
- Dramatically improved overvoltage resistance (protection up to 70 V DC)

High-precision specs in a portable package

- Expansive range options
  Measure from 0.0 $\mu\Omega$ to 3.5000 M$\Omega$
  0.1$\mu$\Omega max. resolution, 0.02% basic accuracy
  Max. measurable current of 1A

- Continuity and resistance measurement in large transformers, motors, and power supply equipment
  The RM3548 uses a high current of 1 A to measure lower resistance values more reliably at a resolution of 0.1 $\mu\Omega$ in applications including measuring resistance in large transformers and motors as well as wiring, busbars and connections in power supply equipment.

- Verification of continuity of ground lines in automobiles and fuselage welds and caulking in aircraft
  The RM3548 can be used to check ground connections* in automobiles and fuselage welds and caulking in aircraft using a measurement current of 300 mA (300 m$\Omega$ range).
Portable, easy to use, and easy to understand

- **Design is ideal for maintenance and testing/measurement of large products**
  
The included strap can be looped around the neck to support the instrument, leaving the operator’s hands free to hold probes for measurement. The meter uses eight AA alkaline batteries, which provide enough power for approximately 10 hours of testing under normal operating conditions. (Operating times vary with measurement conditions.)

- **Auto-hold and auto-memory functionality**
  
The RM3548 features auto-hold and auto-memory functionality to automatically hold and record data simply by placing the probes in contact with the desired measurement location. This functionality allows measured values to be recorded automatically as soon as they stabilize without the need for the user to operate any switches.

- **LED COMPARATOR ATTACHMENT**
  
  By installing the LED COMPARATOR ATTACHMENT close to a probe, you can capture judgment results without moving your eyes away from the measurement location and probe.

  - **Green light IN state**
  - **Red light HI/LO state**

- **Offset Voltage Compensation (OVC)**
  
  Thermal EMF occurs at the contact point of different metals. This voltage affects measurements, and if large enough, can cause measurement errors. The offset voltage compensation function minimizes the effect of thermal EMF to maintain measurement accuracy. Particularly when measuring low resistances where the detection voltage is small, and during low-power resistance measurements, OVC is essential to maintain accuracy.

- **Length conversion function**
  
  By setting a resistance value per meter, it is possible to convert resistance values into lengths. This capability is useful when managing cable inventory or estimating PCB pattern lengths.

- **No zero adjustment**
  
  Accuracy is defined without any need to perform zero-adjustment. Measurement can be performed as soon as the instrument is turned on.

- **Dramatically improved overvoltage resistance**
  
  Protection is provided against overvoltage input of up to 70 V, preventing damage caused by connecting the instrument to an electrical charge or by the effects of the counter-EMF from inductance.

- **Acquire measured values recorded in the instrument’s memory over a USB connection**
  
  By connecting the RM3548 to a computer with a USB cable*, you can download measured values stored in the instrument’s memory. *Since the RM3548 provides a mass storage class (read-only) USB interface, there is no need to install special driver software on the computer.

### Temperature conversion function and interval measurement: Useful in temperature-rise testing

Temperature increase (\(\Delta t\)) is obtained and displayed by converting resistance measurements and ambient temperature. The maximum temperature increase needs to be determined when current is applied especially for verifying motor windings or transformers. The interval measurement function can be used to take measurements at a user-specified interval from the start of measurement. Since measured values can be recorded in the instrument’s memory, the maximum temperature can be easily estimated.

*The temperature conversion function cannot be used simultaneously with the temperature correction function and length conversion function.*

1. When a motor or coil has thermally stabilized at room temperature, measure the resistance \(r_0\) and ambient temperature \(t_0\) before applying current.
2. Excite the coil, and when the temperature increase appears to saturate, remove the excitation.
3. After removing excitation, determine the temperature \(\Delta t_1\) to \(\Delta t_n\) from the resistance \(r_t\) measured at each specific time \(t\), and the ambient temperature.
4. Project the curve through the collected temperature data \(\Delta t_1\) to \(\Delta t_n\) to estimate the maximum temperature increase \(\Delta t\).
**Measurement accuracy**

- **Resistance measurement accuracy**
- **Conditions of guaranteed accuracy**
  - Temperature & humidity: 23 °C ±5 °C, 80% rh or less (non-condensating)
  - Accuracy guaranteed for 1 year, Post-adjustment accuracy guaranteed for 1 year
  - From 0°C to 18°C and from 28°C to 40°C, add (temperature coefficient ±[1/10 measurement accuracy] / °C).

**RESISTANCE METER RM3544**

*The L2101 is bundled with the RM3544 series*

**Model Configuration and Options**

**RESISTANCE METER RM3544**

*Model No. (Order Code) (Note)*

<table>
<thead>
<tr>
<th>RM3544</th>
<th>(No interfaces)</th>
<th>RM3544-01</th>
<th>(with EXT I/O, RS-232C, USB)</th>
</tr>
</thead>
</table>

Accessories: [RS232C cable 9638](#) For the PC, 9pin - 25pin, cross, 1.8m (5.91 ft) length

**Caution when considering the use of probes without guard terminals**

Proper operation of the RM3544 is not guaranteed when using test leads (test probes) that lack guard terminals, for example test leads used with models such as the Resistance HiTester 3541 or mΩ HiTester 3540. Please use the test leads indicated in the RM3544 accessory and option documentation.

**Model : RESISTANCE METER RM3548**

*Model No. (Order Code) (Note)*

<table>

Accessories: Clip type lead L207, Temperature sensor Z2002, Instruction manual, USB Cable (A-to-B type), Strap, Spare fuse

**Measurement Leads**

**CLIP TYPE LEAD L2107**

- Variable length up to 1.1 m (3.61 ft)
- Max.: 84 mm (5.27 mm), 1.1 m (5.66 ft)
- 70 VDC

**FOUR TERMINAL LEAD L2043**

- Variable length up to 1.1 m (3.61 ft)
- Max.: 84 mm (5.27 mm), 1.1 m (5.66 ft)
- 40 VDC

**LED COMPARATOR ATTACHMENT L2105**

- 2 m (6.56 ft) length

**About probe length**

</tbody>
</table>

Accessories: Power cord, Clip type lead L2101, Instruction manual, Spare fuse

**Measurement Leads**

**CLIP TYPE LEAD L2107**

- Variable length up to 1.1 m (3.61 ft)
- Max.: 84 mm (5.27 mm), 1.1 m (5.66 ft)
- 70 VDC

**FOUR TERMINAL LEAD L2043**

- Variable length up to 1.1 m (3.61 ft)
- Max.: 84 mm (5.27 mm), 1.1 m (5.66 ft)
- 40 VDC

**LED COMPARATOR ATTACHMENT L2105**

- For RM3544-01, 3.54, 5.10, 5.84, 2 m (6.56 ft)

**ZERO ADJUSTMENT BOARD 9454**

- For the L2000, 9485-10, 9485-9441

**TIP PIN 9405-90**

- To replace the tip on the 9405-10, (one piece)

**TIP PIN 9772-90**

- To replace the tip on the 9772, (one piece)

**TIP PIN 9772-90**

- To replace the tip on the 9772, (one piece)

**LARGE CLIP TYPE LEAD 9487**

- Max.: 100 mm (3.94 in), 210 mm (8.31 in), 60 VDC

**CARRYING CASE C1006**

- For the RM3548
