

# Exceed All Limits

Fast and powerful - the best specs in the history of Memory HiCorders

User-friendly design for accurate and smooth operation Usability Intuitive operation via large 12.1-inch touch screen Blazingly fast, Sampling that never fails

Speed High-speed isolation measurement at 200 MS/s Radically improved time to save measurement data

Storage Stress-free user experience Superior processing capacity so you can save data during

Long-term measurement Save data in real time, 32 times faster than conventional market-leading models Recording

## **Overwhelmingly High-speed Technology**

## A Revolutionary Approach to Measurement, Recording, and Analysis

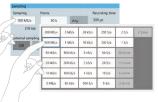

## Flexible, User-friendly Design

- · Fast and convenient touch screen
- · Operation as smooth as silk

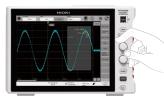

The capacitive touch screen delivers intuitive operability. Select a setting item directly by tapping the screen, and use your fingers to enlarge the part you want to see.

This improved user interface makes setting measurement items for multiple channels easy.

Simply tap the screen to select and change settings.

▲ Tap the screen and use the knob to move the trace cursor as desired.

200 MS/s

## **Highest Sampling Speed in the Entire Series**

- · High-speed isolation measurement at 200 MS/s
- · Up to 16 analog channels & 12-bit ADC resolution

The Hioki Memory HiCorder lineup now includes a powerful input unit that unlocks the full measuring potential of the MR6000.

The High Speed Analog Unit U8976 boasts the highest sampling rate in its entire series, an order of magnitude faster than conventional models, enabling the unit to perform isolated measurement at 200 MS/s.

(200 MS/s measurements can be achieved even if a unit other than the U8976 is connected at the same time. However, the data update rate will not exceed the maximum sampling rate of the other units.)

Max. 16 channels 12-bit ADC resolution

High Speed Analog Unit U8976

#### Blazingly fast, Sampling that never fails

The High Speed Analog Unit U8976 delivers a 30 MHz frequency band in addition to high-speed sampling at 200 MS/s. It has the performance needed to accurately capture switching waveforms during inverter evaluation testing, an application where high efficiency is critical. Adapted to the Memory HiCorder's direct input feature, it can accept inputs of up to 400 V DC.

#### Used in combination with the 10:1 Probe 9665

If you encounter issues with the capacitance components of connection cords, use the 10:1 Probe 9665 to reduce the effects on measured waveforms.

 $^*$ For more information about frequency deratings, either consult the user manual that comes with the 9665 or contact Hioki.

#### Safer due to channel-to-channel optical isolation

Connections between analog input channels, and between the input channel and the main unit, are fully isolated. This means that, unlike an oscilloscope, measurements can be made without concern with negative effects from voltage

differences. This is because connections between analog input channels, and between the input channel and the main unit, are fully isolated.

No missed high-speed signals

Capture switching waveforms accurately

## Fastest Save Processing in the Entire Series

- · Radically improved data saving time
- · Stress-free user experience

Transferring very large amounts of data measured over a long period of time used to be very time-consuming.

The MR6000 features a brand new interface and faster internal processing, reducing the time required to save measurement data to media.

For example, a save operation that took 1 minute on the previous model now completes in 2 seconds. This saves you the trouble of waiting for data to be saved and

## Longest Continuous Recording in the Entire Series

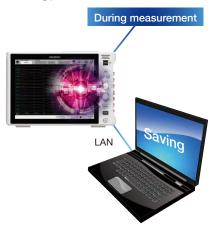

- · Long-term recording and high-speed sampling in multiple channels
- · Instant analysis of measurement results

You can control the available measurement time by using the real-time save function and an additional storage media.

For long-term recording, we recommend ordering the MR6000 with a built-in high-capacity SSD or HD unit. You can also use a more convenient USB memory stick or SD memory card. All phenomena can be recorded at a high sampling rate over a long period of time.

#### Saving data directly to your PC

Transfer measurement data directly to your PC by using the FTP sending function or network drive function together with the real-time save function. This makes it easier to observe data after the measuring process.

#### Available real-time save duration when setting 1 MS/s

# An Extensive Line of Units for Detecting a Wide Range of Phenomena

Combine multiple units to record a range of phenomena. Use multiple logic units to measure relay ON/OFF signals or PLC (programmable logic controller) signals across up to 128 channels simultaneously. You can also measure temperature by attaching a thermocouple to a temperature unit

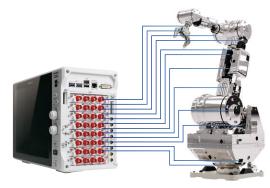

## Simultaneously measure up to 32 channels

#### 4ch Analog Unit U8975

The U8975 accepts direct input of up to 200 V DC across 4 channels. With a sampling rate of 5 MHz (across a frequency band of 2 MHz), high speed, and 16-bit resolution, it can perform multi-channel, high-speed, and high-resolution measurement.

Simultaneous measurement of multiple locations across 32 channels at 5 MS/s

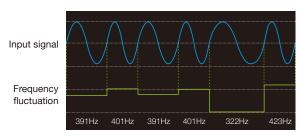

## Record frequency fluctuation and pulse count/integration data

#### Frequency Unit 8970

Use the Frequency Unit 8970 to record measured waveform frequency, RPM, input pulse integration, duty ratio, and pulse width variations. It can accommodate numerous applications, including measurement of motor RPM, vehicle speed, and power supply frequency fluctuations. Thanks to a maximum input voltage of 400 V DC, it can also directly measure 3-phase circuit carrying up to 200 V.

Time

AC 700 V DC 1000 V

## Direct, high-voltage input without differential probes

#### High Voltage Unit U8974

The U8974 is ideal for measuring the primary and secondary sides of UPS power supplies and commercial power supply transformers. It can measure high-voltage power lines, including 380 V and 480 V circuits found in many countries. With high-speed sampling at up to 1 MS/s and 16-bit resolution, it can also be used in load rejection testing and switch testing.

Analyze correlations between phenomena, including voltage levels before and after generator disconnection, RPM fluctuation rates, governor servo operating status, and voltage governor switching timing.

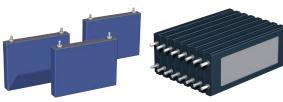

Minimum resolution 0.1 μV

## Specifically designed for DC voltage measurement with extremely high precision and resolution

#### Digital Voltmeter Unit MR8990

The MR8990 can measure minuscule fluctuations in sensor output of automobiles and voltage fluctuations in batteries, both at high precision and resolution. It can accommodate maximum input of 500 V DC. This high input impedance allows you to measure the battery voltage without being concerned about leakage current. Additionally, the amount of space taken up by instruments can be reduced by replacing a bench-style DMM with the MR6000. Systems can be simplified by eliminating the need to control multiple instruments.

Battery Battery pack

# Simultaneously measure up to 32 channels at high resolution 4ch Analog Unit U8978

Thanks to four input channels and a high-sensitivity 100 mV f.s. range, the U8978 can measure multiple channels of output from a variety of sensors. The unit is ideal for use in measuring currents of various magnitudes in the development of automobile accessory controls. Utilized in combination with the multi-range Current Probe CT6711, it can measure currents from 1 mA to 50 A.

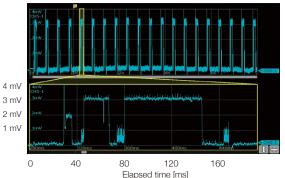

## Observe minuscule currents using high-sensitivity wideband current probes

#### Current probe lineup

Analyze minuscule current waveforms from low-power-consumption devices in 100 µA resolution. Record device current consumption waveforms in high resolution over extended periods of time.

Current consumption waveform for a temperature and humidity sensor

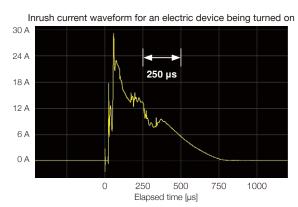

During measurement with the CT6711 (10 V/A range)

## High-speed sampling lets you accurately measure inrush current

#### High-Speed Analog Unit U8976

Combine the High-Speed Analog Unit U8976's 30 MHz frequency band with the Current Probe CT6711 to measure inrush currents and minuscule currents.

#### Power can be supplied from the MR6000.

Power can be supplied to current probes by using the Power Probe Unit Z5021.

Hioki offers a wide range of current probes to suit all frequency band and rated current needs.

## Single solution for 3-phase current measurement 3ch Current Unit U8977

The U8977 delivers a sampling rate of 5 MS/s, frequency characteristics of 2 MHz, 16-bit A/D resolution, and DC accuracy of 0.3% f.s. to facilitate wideband, high-precision current measurement using Hioki current sensors.

## Automatic configuration of sensor scaling values

When you connect a current sensor, the MR6000 will automatically detect the model and set the appropriate scaling value.

#### Connect sensors directly

## Power is supplied from the current unit

Since current sensor power is supplied directly from the current unit, there's no need to provide a sensor power supply.

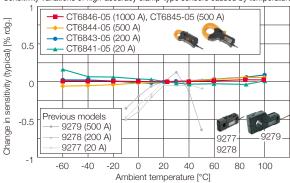

## Compatible with high-precision sensors for measuring large currents

#### Current sensor lineup

Clamp-type high-accuracy sensors deliver excellent temperature characteristics, allowing highly accurate measurements to be made even in the confined space of a vehicle's engine compartment.

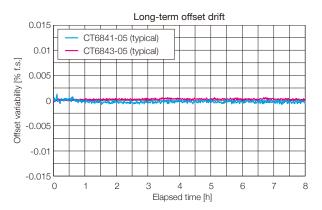

#### Sensitivity variations of high-accuracy clamp-type sensors caused by temperature

#### Zero-point stability

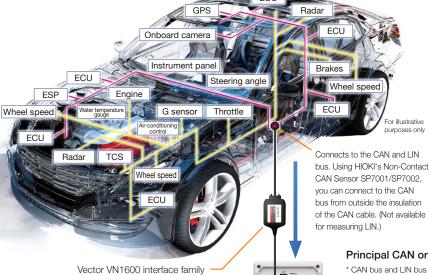

Wideband flux gate technology delivers high zero-point stability over extended periods of time.

Hioki offers a wide range of current sensors to suit all frequency band and rated current needs.

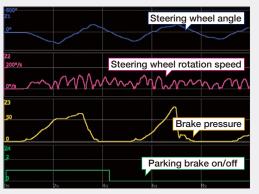

## CAN/CAN FD Measurement, LIN Measurement

CAN buses carry not only control information, but also sensor information required by the ECU for control purposes. Analog values for sensor input signal quantities such as voltage, strain, temperature, flow rate, RPM, torque, vehicle speed, and vibration can be measured at the same time as these signals.

## Capture all data on the CAN and LIN bus during measurement

The MR6000 captures all frame data on the CAN or CAN FD bus and LIN bus during the set recording time. After measurement, you can specify the signals you wish to check and display them on the screen.

Choose signals to display after measuring all bus signals

#### Principal CAN or LIN signal measurement specifications

\* CAN bus and LIN bus cannot be measured at the same time.

#### Transmit function

For CAN

You can send data configured before measurement to the CAN bus at the start of measurement or when a trigger is activated.

A shortcut key can be assigned to the transmit function

#### **CAN** trigger function

For CAN

You can use a CAN signal (frame) as a trigger source. The trigger will be activated when the set CAN signal type and ID is input.

#### Data frames

#### Remote frames

Set the ID, expressed by a hexadecimal value, as a trigger source.

#### Error frames

Error frames can also be set as a trigger source.

## Hioki offers CAN signal acquisition sensors

For CAN

Non-Contact CAN Sensor SP7001/SP7002

> No modification of vehicle cables Acquire signals simply by pinching the cables with the probe.

No effect on the CAN bus or vehicle ECUs

Non-contact sensing technology

Accurate, reliable signal capture Ideal for use in development and evaluation applications

<sup>\*&</sup>quot;Vector" refers to the Vector Group, whose parent company is Vector Informatik GmbH. \*Hioki is unable to provide Vector products. Please purchase those products separately.

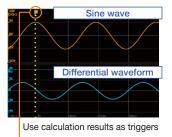

## Real-time Waveform Processing Function

#### Real-time waveform processing

#### Exclusive MR6000-01 feature

#### Calculate measurement data during measurement

The MR6000-01 further features powerful technology designed for robust real-time waveform processing. This function performs arithmetic (addition, subtraction, multiplication, and division), differentiation calculations, or integration calculations during the measuring process, letting you check the calculated results via waveforms while measuring or monitor starting from set triggers. Results can be further processed after measurement and saved.

For example, you can calculate a differential waveform for input signals in real time and apply a trigger based on it. You can detect the timing of an input signal's local maximum and minimum values and output an external signal from the TRIG.OUT terminal.

Simple setting method

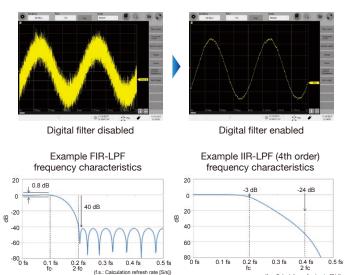

Real-time waveform processing option

#### Digital filter calculations

#### Exclusive MR6000-01 feature

#### Observe clear waveforms without noise

Remove harmonic noise or specific frequency noise from measurement data. Use it to eliminate the noise that cannot be resolved with the standard filter installed in the unit.

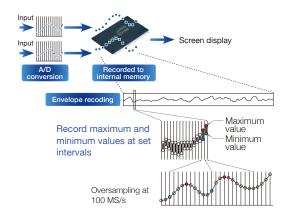

## Long-term Recording Functionality

In addition to the real-time save function, the MR6000 provides a range of functionality for extended recording.

#### **Envelope function**

## Observe fluctuations over the long term with high-speed sampling

The system uses the envelope measurement method to record maximum and minimum values at set intervals while performing oversampling at 100 MS/s. The internal memory has a capacity of 1 G-words, which ensures that the measuring process can continue for a long time without any data loss. Save data in real time while measuring.

| Over-sampling speed | Recording interval | 1 ch               |      | 9 to 16 ch    |
|---------------------|--------------------|--------------------|------|---------------|
|                     | 10 MS/s            | 50 s               |      | 2 s           |
|                     | 1 MS/s             | 8 m 20 s           |      | 20 s          |

| 100 MS/s            | 10 kS/s            | 13 h 53 m 20 s     |      | 33 m 20 s     |
|                     | 1 kS/s             | 5 d 18 h 53 m 20 s |      | 5 h 33 m 20 s |
|                     |                    | more than a        | hove |               |

<sup>\*</sup>Limitations apply to measurable time when the U8975, U8977, U8978, or MR8990 is in use, and when performing real-time waveform processing.

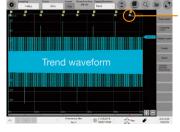

#### **Dual sampling function**

#### Measure anomalies during extended testing with high-speed sampling

In vibration testing, it's necessary to record comprehensive test data for several hours. At the same time, it's necessary to capture areas of the waveform where anomalies occur with high-speed sampling for analysis once measurement is complete. The dual sampling function is useful in such situations.

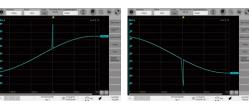

#### (1) Record the entire trend waveform

Use the envelope function to record comprehensive test data for several hours.

## (2) Check details with the instantaneous waveform

Anomalies occurring during the test will be captured with high-speed sampling based on triggers that have been set up in advance. By tapping on a trigger mark's number, you can display the instantaneous waveform for the anomaly that occurred at that waveform area.

Tap to enlarge the anomaly waveform

# Trend waveform

## Verify that no anomalies occurred during extended testing

#### No trigger marks

If no instantaneous waveform triggers activated, there were no anomalies. By viewing the trend waveform, you can not only verify that no anomalies occurred, but also check whether the device under test operated properly.

## Trigger Function

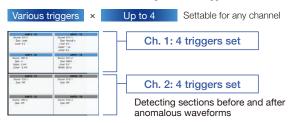

#### Triggers that detect targeted events

Set triggers on any channel to record data whenever an event occurs. Triggers can be set for all channels.

#### Setting multiple triggers for a single channel

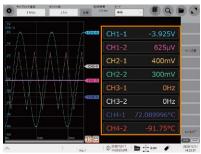

Set up to 4 triggers for a single channel. If, for instance, you set the glitch, level, window-in, and window-out triggers for the same input waveform, that waveform is monitored according to the set trigger conditions

## Display Functions

#### Numerical display function

This function is effective for checking the status before and during measurement.

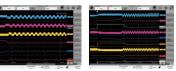

Displays the measured value and the waveform at the same time.

#### Sheet function (display group)

The instrument supports 3-, 6-, and 9-segment screen displays, allowing measurement results for 3-phase circuits to be displayed efficiently.

the sheet button

6-screen display 9-screen display

FFT display

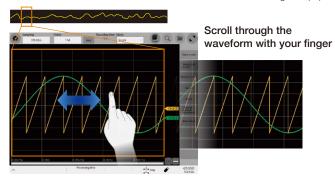

8-screen display

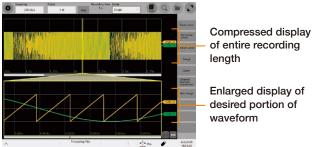

2-screen display

#### Scroll function

You can use the scroll function to check the waveform as if viewing it on paper.

#### Zoom function

X-Y display

## Waveform Search Function

#### Easily search for waveforms in huge volumes of measurement data

#### Memory HiCorder Concierge function

The Memory HiCorder Concierge function automatically calculates the characteristics of a reference waveform set by the customer and then searches all measured data while identifying waveforms that do not resemble the reference waveform as anomalous waveforms

This drastically reduces the amount of time required to search for anomalies by eliminating the need to scroll through measured waveforms and checking them visually.

Additionally, this function is ideal for situations where it is difficult to set the right triggers before measuring because the nature of potential anomalies cannot be predicted.

The zoom function allows you to display all measurement waveforms on a single screen in the manner of an oscilloscope and to view desired locations in greater detail.

#### Peak search

Search for the maximum value, minimum value, local maxima, or local minima in all of the measured data, and mark the search point in the waveform.

#### Trigger search

Set trigger conditions for all of the measured data after measurement to search for points where the conditions are fulfilled, even if no triggers were set before the measuring process.

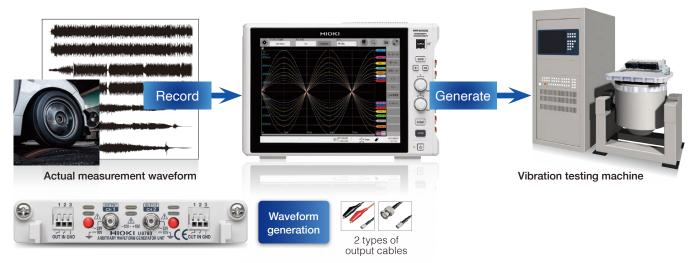

#### Jump

Jump to an event mark you made while measuring, to the cursor position on the display, or to the measured data of a specified time.

## Waveform Generation Function

#### Achieving the dual role of generation and recording with a single unit

The arbitrary waveform generation function and waveform measurement function are realized by one Memory HiCoder.

## Waveform output as expected ARBITRARY WAVEFORM GENERATOR UNIT U8793

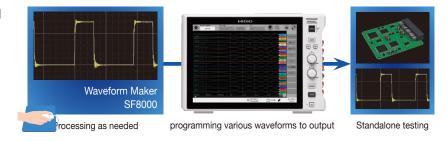

Waveform observation while changing test conditions, such as changing the signal type, amplitude and frequency, and programming various waveforms to output them sequentially, can be made easier.

#### Output waveform example

#### Waveform Maker Software included

After you install the included SF8000 Waveform Maker software on MR6000 or your computer, you can create waveforms easily by either entering them directly or by entering the formulas behind them. You can also quickly add noise and multiply waveforms.

#### **Anomaly Simulation**

Reproduce and output the observed waveforms without modification. When resolving problems observed during research or development, you can reproduce such problems for efficient testing. For example, you could output actual waveforms recorded from a car without modification, and then use them for standalone testing. You can also generate isolated output of up to 15 V while varying the signal's amplitude and frequency without using a generator or amplifier, which is traditionally necessary. For example, you can create a power waveform such as power supply dips, instantaneous interruptions, and voltage fluctuations to use in an immunity test (to cause malfunctions in equipment caused by power supply harmonics).

Reproducibility testing

Measurement of abnormal waveform in actual vehicles

Max. 15 V output + amplifier

Reproduce and output anomalous waveforms

#### DC/sine wave output WAVEFORM GENERATOR UNIT MR8790

- $\cdot$  4 channels  $\phantom{-}\cdot$  DC and up to 20 kHz sine wave signal output
- $\cdot$  Signal output ±10 V, 5 mA

## Pulse/pattern/logic/open collector output PULSE GENERATOR UNIT MR8791

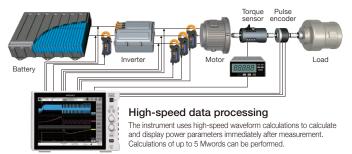

- · 8 channels · Pulse waveform signal output
- · Output mode (pulse output, pattern output, logic output, open collector output)

Supported by MR6000 Ver.4.00

## Power measurement functionality

#### Simultaneous measurement of a motor inverter's mechanical signals and power

The MR6000 can perform power measurement, which provides an effective means of evaluating the mechanical operation and electrical characteristics of equipment such as motor inverters. The instrument's power calculation function can display power values that change in small amounts of time on a cycle-by-cycle basis.

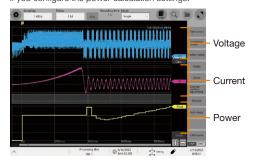

When a Hioki high-precision current sensor is directly connected using the 3CH Current Unit U8977, the instrument automatically detects the sensor. (There is a limit on how many sensors can be connected.)

When measuring high voltages, the instrument can supply power to up to eight Differential Probe 9322 units using the Power Cord 9248 and the Probe Power Unit Z5021.

#### Display of voltage, current, and power trends

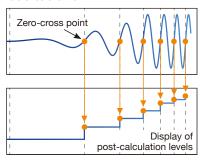

When measuring voltage and current after configuring power calculation settings, the instrument automatically performs waveform calculations and displays power values. In addition, it can display calculation results after measurement if you configure the power calculation settings.

Example display of power calculation results

#### Cycle-by-cycle calculations

The instrument performs calculation processing for each cycle, defined as the interval from one zero-cross point to the next zero-cross point, based on the waveform chosen as the reference channel.

Power calculations based on detected cycles

#### Simple settings screen

A dedicated screen makes it easy to configure settings for power calculations, including wiring method and voltage and current channels.

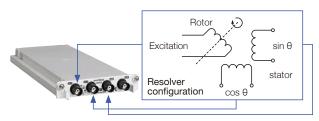

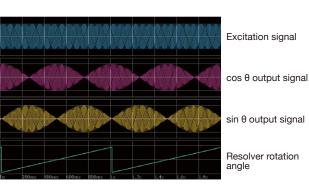

No need to register detailed power equations

## Rotation angle measurement functionality

#### Measurement of resolver rotation angle

Using the waveform calculation function, the instrument acquires three channels of data (resolver excitation signal,  $\cos\theta$ , and  $\sin\theta$ ) and generates a trend display for the motor's rotation angle.

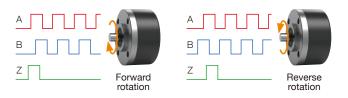

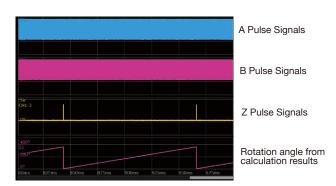

Example of resolver signal measurement

#### Measurement of rotary encoder rotation angle

Using the waveform calculation function, the instrument acquires the A, B, and Z pulse signals from the rotary encoder and generates a trend display for the motor's rotation angle.

\*Only incremental method is available. Absolute method is not available.

Example of rotary encoder rotation angle waveform

#### **Applications**

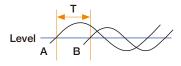

#### **Time Measurement**

By performing numerical calculations on measured waveforms, you can perform analyses using numerical parameters. Not only analog channels and logic channels, but also results of the real-time waveform calculation function can be used in this calculations.

#### Calculating switching times measured using logic channels (t1, t2, t3, T)

You can calculate time differences by applying numerical calculations to signals measured with logic channels.

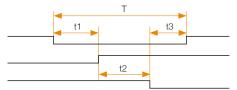

Calculate the time difference T (s) at which waveforms A and B cross the specified level when either rising or falling.

Time difference T = Waveform B (time at which levels cross) - waveform A (time at which levels cross)

Reference channel (waveform A) calculation settings: Level Slope Calculation target channel (waveform B) calculation settings: Level Slope

Measurement waveforms and desired time differences

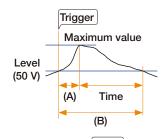

| Trigger time               | 12:00.0 |
|----------------------------|---------|
| No. 1 time difference (t1) | 1.50 s  |
| No. 2 time difference (t2) | 2.00 s  |
| No. 3 time difference (t3) | 1.00 s  |
| No. 4 time difference (T)  | 4.50 s  |

Example above: numerical calculation results

#### Calculating the time that elapses until a reading falls from the maximum value to a defined level (e.g. 50 V) after a capacitor is charged during capacitor charge/discharge testing

You can calculate the defined value by calculating the time at which the maximum value occurs and the time at which the specified level occurs using numerical calculations and then performing your desired arithmetic operations.

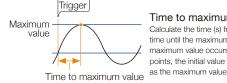

- 1. Calculate the time to the maximum value (A) Calculation settings: Time to maximum value
- 2. Calculate the time at the specified level (B) Calculation settings: Level Slope Filter
- 3. Subtract (A) from (B)

Calculation settings:

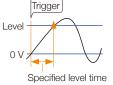

Calculation No. 1

arithmetic operation

Calculation No. 2

Time to maximum value Calculate the time (s) from the trigger time until the maximum value. If the maximum value occurs at 2 or more points, the initial value will be treated

#### Specified level time

The Memory HiCorder searches for the point at which the previously set level is crossed. It then calculates the time between the start of the calculation range to that level crossing point

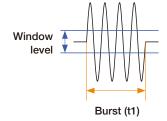

Four arithmetic operations Select the result of the numerical

calculation and apply your desired arithmetic operations (addition, subtraction, multiplication, or division).

#### Calculating the motor inrush starting current time (t1)

You can derive the desired time by calculating the burst width using numerical calculations.

#### Calculate the time at which the burst signal is output

Calculate the duration of an oscillating signal, for example the inrush current when a motor starts operating, as the burst width.

Calculation settings:

Filter **Statistics** Burst end filter Window (upper limit, lower limit)

#### Available calculation functions

Numerical calculations Perform up to 32 of 34 available calculations simultaneously during measurement.

| Average value |                       | Minimum value         | Rise time      | Specified level time |  |
|---------------|-----------------------|-----------------------|----------------|----------------------|--|
|               | RMS value             | Time-to-minimum value | Fall time      | Specified time level |  |
|               | Peak-to-peak value    | Period                | Area value     | Pulse width          |  |
|               | Maximum value         | Frequency             | X-Y area value | Duty ratio           |  |
|               | Time-to-maximum value | Standard deviation    |                |                      |  |

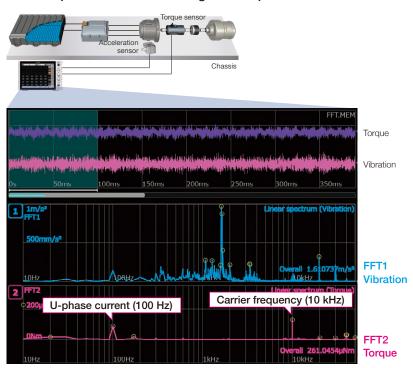

| Pulse count          | High level   | Overshoot  | Burst width        |  |

| Phase difference     | Amplitude    | – Width    | CAN statistics     |  |

## Applications

# Motor Torque and Vibration Measurement

Using a strain-gage-type converter or acceleration sensor, you can measure torque and vibration during motor operation. Discover unpredicted frequency components by using FFT calculations to perform a frequency analysis.

#### Record torque and vibration during motor operation

## Simultaneous measurement and instantaneous analysis

The torque sensor (strain-gage-type converter) is connected to the Strain Unit U8969 to measure torque.

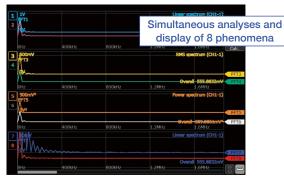

An acceleration sensor affixed to the chassis on which the motor is mounted, is connected to the Charge Unit U8979 to measure vibrations being transferred to the chassis.

The MR6000's FFT calculation function can be used to perform a frequency analysis of torque and vibration signals.

#### Available calculation functions

#### FFT calculation function

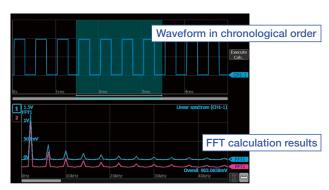

The MR6000 can analyze 8 phenomena simultaneously per measurement. Multiple FFT analyses of signals input from different channels let you investigate the frequency components that appeared for each channel at a single point in time. Similarly, conduct a variety of analyses for a single signal simultaneously.

FFT calculation 4-split screen

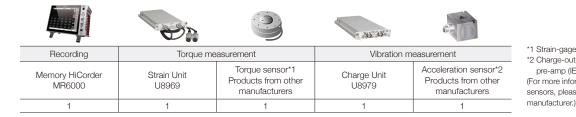

#### FFT analysis directly from the measured data

Perform FFT analysis from measured data. Simply touch the screen to specify the starting point for analysis, while simultaneously viewing the calculation results.

Chronological order + FFT calculation screen

#### **Applications**

# Measurement of Dynamic Motor Characteristics

By using the X-Y display function with RPM on the X-axis, you can analyze fluctuations in torque, motor power, motor efficiency, and inverter output power for each RPM

#### Record fluctuations in various parameters from motor's start to stop

#### All-in-one measurement + pinpoint analysis

The signal from the torque sensor (Strain-gage-type converter) is measured with the Strain Unit U8969. Output from the motor's encoder (e.g. A-phase) is connected to the Frequency Unit 8970 to measure

The 3-phase inverter's voltage is measured using the 4ch Analog Unit U8978 and the Differential Probe 9322.

The 3-phase current is measured using the 3ch Current Unit U8977 and current sensors. Motor power, motor efficiency, and inverter output power are calculated after measurement using high-speed waveform processing, and the results are displayed using the instrument's X-Y display function.

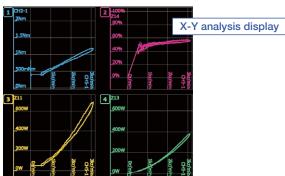

#### Compositing over the specified X-Y interval

You can choose locations and generate an X-Y display of fluctuating waveforms from motor start to motor stop.

#### Available display functions

#### X-Y display function

The MR6000 provides an extensive range of X-Y displays for captured waveforms, including an X-Y 1-screen display, X-Y 2-screen display, X-Y 4-screen display, and time series display + X-Y 2-screen display. The ability to use the X-Y display for waveform processing results as well as input signals from measurement units means that you can perform a broad range of analyses.

#### Software

Load data measured with the MR6000/ MR6000-01 onto a PC to display waveforms and perform calculations

Intuitive operation

Waveform processing

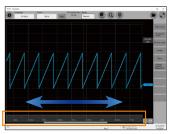

FFT calculations

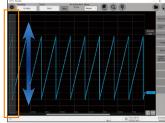

Utilize functionality similar to that provided by the MR6000 on a PC, including numerical calculations, waveform processing, and FFT calculations. (Some restrictions apply.)

| Supported models           | MR6000, MR6000-01  |
|----------------------------|--|
| Supported operating system | Windows 10 (64-bit) For other system requirements, please see the user manual. |
| Availability               | Free download from the Hioki website   |

#### Waveform display zoom

Zoom each axis in or out by spinning the mouse's scroll wheel while placing the cursor over either the left or bottom of the screen.

#### Functionality similar to the MR6000

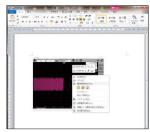

me as instrument iunctionality and usability

You can display data, change settings, perform calculations, and save data in the MR6000 Viewer.

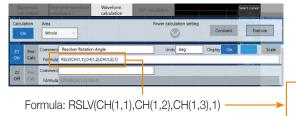

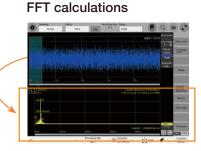

#### Ideal for creating reports

Copy a screenshot of the waveform screen to the clipboard.

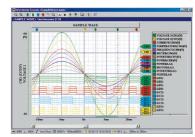

#### Register waveform formulas and perform calculations

#### Wave Processor 9335 (sold separately)

The 9335 provides waveform display, processing, and printing functionality.

#### Overview of 9335 specifications

| System requirements | Windows 10/8/7 (32-bit/64-bit)  |
|---------------------|---|
| Functionality       | Display functionality: Waveform display, X-Y display, cursor function, etc.     File loading: Loadable data formats (.mem, .rec, .rms, .pow); The maximum loadable file is the maximum size of the Memory HiCorder being used. (The loadable file size is also dependent on the maximum size that can be saved by the PC being used.)     Data conversion: Conversion to CSV format, batch conversion of multiple files, etc. |
| Printing            | Printing functionality: Save print image file (in .emf format) 1, 2, 4, 8, or 16 graphs; 2, 4, 8, or 16 rows, 1, 2, or 4 X-Y graphs; preview; hard copy   |

## LAN remote control function

Connect to instruments via a LAN.

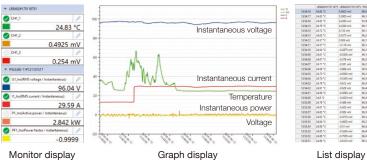

Change instrument settings and control operation, for example to start or stop measurement.

Example remote control screen

#### Simultaneous, real-time observation

GENNECT One lets you display data from multiple instruments together and in real time in list or graph form.

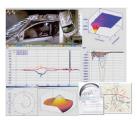

(up to 512 parameters)

Graph display (up to 32 parameters)

List display (up to 32 parameters)

#### Commercially available software

#### **FAMOS**

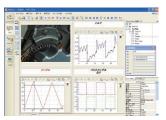

- More than 400 calculation processing variables
- Easy report creation functionality Download a free MR6000 import filter free of charge from Hioki's website.

#### FlexPro

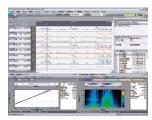

- High-speed search and processing of large volumes of data
- Share analysis templates inside your company

#### NI DIAdem

- Functionality ranging from searching and loading of data to analyzing and creating of reports
- · Dialog-based interface

#### OS-2000

- Freely edit large data that cannot be handled by Excel
- · Simultaneously display the waveforms which have different frequencies

#### Control scripts and drivers

On Hioki's website, search for "MR6000" > "Downloads" > "Drivers, Firmware & Software" to find downloadable drivers.

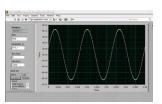

#### MATLAB

Available scripts allow you to directly load waveform data measured and saved using the MR6000's memory function, while control scripts let you start and stop measurement, acquire measurement data, and configure measurement settings.

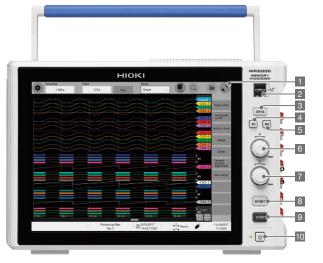

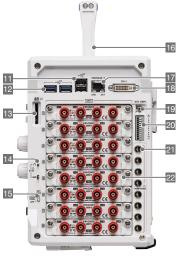

#### LabVIEW

An available driver lets you control the MR6000 and acquire measurement data. The driver was created using LabVIEW 2009 sp1, and it has been confirmed to operate with LabVIEW 2017.

#### Multifunctional Interface

Onen or close the top panel of the main unit Z4006 USB DRIVE installable

#### Only 6 keys in total New recorder design

Use the touch screen to configure all the basic settings.

#### Display

12.1-inch capacitive touch screen TFT color LCD display

#### USB 2.0 connector × 2

For connecting a USB memory stick, USB mouse, or USB keyboard

#### 1000 BASE-T connector

For connecting to a network via LAN cable

#### **DVI terminal**

For outputting the screen display

#### External sampling terminal

For inputting various external sampling signals

#### External control terminal

For inputting various external signals to control the device

## Dedicated power supply terminal for current sensors

For supplying power to current sensors (option)

#### Various units

Install input units appropriate for the measurement target

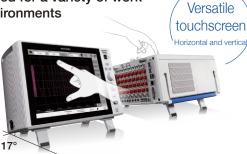

#### Air inlet

For reducing the internal temperature

#### Media box

For USB 3.0 connectors (USB memory sticks only)

#### Operability and visibility suited for a variety of work environments

#### Ergonomical operating angle

Our search for a touch screen with the best operability and visibility angle led us to develop retractable feet that maximize those two important a desk, and keeps your line of sight at a natural level.

# Convenient long handle Robust design

#### Easy handling

The rubber handle boasts excellent grip and makes it easy to carry the device with either one or both hands. The grips on either side of the device can also be used to lift it with both hands.

## Compared to conventional models 1/2 size See compared to 8861-50

#### Space-saving size

We have achieved a design that is compact while still delivering blazing fast processing speeds by using thermal liquid analysis to optimally position the air inlets, heating components, and cooling fans.

#### Sleek design

The beveled corners of the Memory HiCorder's body gives the device a compact and sleek look. This simple and refined appearance is sure to be a strong addition to the creative environment of any R&D workspace.

attributes. Tilting the MR6000 with the feet reduces the strain on your wrists when you use the device on

## System Chart of Options

All prices are exclusive of tax.

## Model: MEMORY HICORDER MR6000 Model No. (Order code) (Specifications) MR6000 (Main unit only, install up to 8 optional input modules) (Real-time waveform processing and other functions MR6000-01

Note: The main unit cannot operate alone. You must install one or more optional input modules in the unit. The Z5021, U8332, and U8333 are factory built-in options and cannot be installed by the user

#### Factory-installed option A \*Must specify when ordering

\*Power can be supplied to up to 9 current sensors, including the current sensors connected to the CURRENT UNIT US977 and CURRENT UNIT 8971.

00000000

PROBE POWER UNIT Z5021 Specified upon order, ±12 V DC, supply for up to 8 probes

#### Factory-installed option B

\*Must specify when ordering

SSD UNIT U8332 Specified upon order; built-in type, 256 GB

#### Factory-installed option C

HD UNIT U8333 Specified upon order; built-in type, 320 GB

#### Storage media

\*Use only the storage media sold by HIOKI. Compatibility and performance are not guaranteed for storage media made by other manufacturers. You may be unable to read from or save data to such media.

SD MEMORY CARD Z4001

SD MEMORY CARD Z4003 8 GB

USB DRIVE Z4006

16 GB Using highly durable and reliable SLC flash memory

#### Non-contact CAN measurement

Non-Contact CAN Sensor SP7001-90 CAN FD/CAN support, bundle including SP7001/SP7100/SP9200, use by connecting to Vector interface or similar product,

Non-Contact CAN Sensor SP7002-90 CAN support,

bundle including SP7002/SP7100/SP9200, use by connecting to Vector interface or similar

#### Case

CARRYING CASE C1010 For the MR6000, hard trunk type, for storing

#### Input modules

HIGH SPEED ANALOG UNIT U8976 2 ch, voltage input, 200 MS/s, (DC to 30 MHz)

2 ch, voltage input, 20 MS/s, (DC to 5 MHz)

4CH ANALOG UNIT U8975 4 ch, voltage input, 5 MS/s, (DC to 2 MHz), Input voltage limit: 200 V DC

4CH ANALOG UNIT U8978 4 ch, voltage input, 5 MS/s, (DC to 2 MHz), highest sensitivity range 100 mV f.s.

HIGH RESOLUTION UNIT 8968 2 ch, voltage input, 1 MS/s (DC to 100 kHz)

DC/RMS UNIT 8972

2 ch, voltage/1 MS/s, (DC to 400 kHz) RMS rectifier (DC, 30 to 100 kHz)

HIGH-VOLTAGE UNIT U8974 2 ch, voltage input, max. 1000 V DC and 700 V AC

DIGITAL VOLTMETER UNIT MR8990

2 ch, high-precision DC voltage, 0.1 µV resolution, maximum sampling rate 500 times/s

3CH CURRENT UNIT U8977

3 ch, for measuring current using dedicated current sensors, can be directly connected to ME15W (12-pin) connector-type sensors, for use with up to 3 units

**CURRENT UNIT 8971** 

2 ch, for measuring current using dedicated current sensors, 2 CONVERSION CABLES 9318 included, for use with up to 4 units

TEMP UNIT 8967

2 ch, thermocouple temperature input

STRAIN UNIT U8969 2 ch, strain gauge type converter amp

CONVERSION CABLE L9769 (for STRAIN UNIT U8969 only, included)

FREQ UNIT 8970

2 ch, for measurement of frequency, RPM, pulse, etc.

CHARGE UNIT U8979
2 ch, for acceleration measurement, supports charge output, pre-amp output (IEPE type), and voltage output

LOGIC UNIT 8973

4 terminals, 16 ch, installable in all 8 slots

#### Output modules \* Input cords not included. Please purchase separately

ARBITRARY WAVEFORM GENERATOR UNIT U8793 2 ch, 10 mHz to 100kHz FG, -10 V to 15 V output, D/A refresh rate (arbitrary waveform generator mode): 2 MHz

WAVEFORM GENERATOR UNIT MR8790

PULSE GENERATOR UNIT MR8791 8 ch, 0.1 Hz to 20 kHz pulse output, pattern output

#### Logic signal measurement

LOGIC PROBE 9327

LOGIC PROBE 9320-01

4-channel type, for voltage/contact signal ON/OFF detection Not isolated Response pulse width: 500 ns or more (9320-01), 100 ns or more (9327) Digital input threshold: 1.4 V / 2.5 V / 4.0 V Maximum input voltage: 0 to +50 V DC

## Logic Probe MR9321-01

4 channels, ON/OFF detection of AC/DC voltage

Isolated
Response time: rising, 1 ms or less; falling, 3 ms or less
Output (H) detection: 170 to 250 V AC, ±(70 to 250) V DC (HIGH range)
60 to 150 V AC, ±(20 to 150) V DC (LOW range)
Output (L) detection: 0 to 30 V AC, ±(0 to 43) V DC (HIGH range)
0 to 10 V AC, ±(0 to 15) V DC (LOW range)
Maximum input voltage: 250 Vrms (HIGH range), 150 Vrms (LOW range)

#### External sampling measurement

CONNECTION CABLE L9795-01 Max. rated voltage to ground: 33 V AC rr

SMB terminal to alligator clip, 1.5 m (4.92 ft.) CONNECTION CABLE L9795-02 Max. rated voltage to ground: 33 V AC rms or 70 V DC, SMB terminal to BNC terminal, 1.5 m (4.92 ft.)

#### **PC Software**

MR6000 Viewer Software that provides operability similar to the MR6000, allowing you to load measurement data, display waveforms, and perform calculation

..Free download

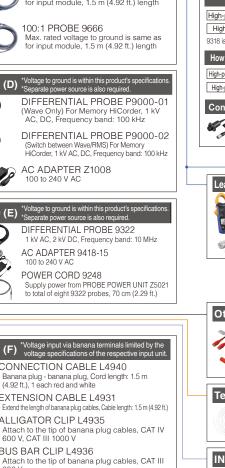

WAVE PROCESSOR 9335 PC display for massive amounts of waveform data and more

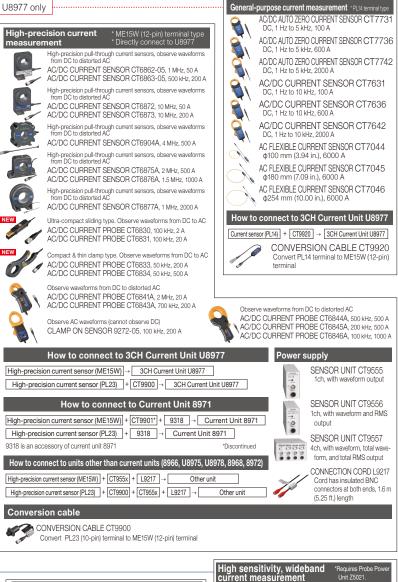

#### LAN CABLE 9642

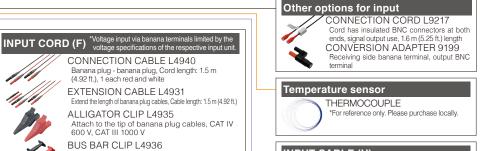

#### \*Voltage is limited to the specifications of the input modules in use. **INPUT CORD (A)** CONNECTION CORD L9790 Flexible φ 4.1 mm (0.16 in.) thin dia. cable allowing for up to 600 V input, 1.8 m (5.91 ft.) length \*The end clip is sold separately. ALLIGATOR CLIP L9790-01 Red/black set attaches to the ends of the cables L9790 GRABBER CLIP 9790-02 \*When this clip is attached to the end of the L9790, input is limited to CAT II 300 V. Red/black set. CONTACT PIN 9790-03 Red/black set attaches to the ends of the \*Voltage is limited to the specifications of the input modules in use. INPUT CORD (B) CONNECTION CORD L9198 $\varphi$ 5.0 mm (0.20 in.) dia., cable allowing for up to 300 V input, 1.7 m (5.58 ft.) length, small alligator clip CONNECTION CORD L9197 $\varphi$ 5.0 mm (0.20 in.) dia., cable allowing for up to 600 V input, 1.8 m (5.91 ft.) length, detachable large alligator clips are bundled GRABBER CLIP L9243 Attaches to the tip of the L9197, red/black set, full length: 185 mm (7.28 in.) INPUT CORD (C) frequency. For details, see the 10:1 PROBE 9665 user ma 10:1 PROBE 9665 Max. rated voltage to ground is same as for input module, 1.5 m (4.92 ft.) length 100:1 PROBE 9666 Max. rated voltage to ground is same as for input module, 1.5 m (4.92 ft.) length INPUT CORD (D) \*Voltage to ground is within this product's sp. \*Separate power source is also required. DIFFERENTIAL PROBE P9000-01 Wave Only) For Memory HiCorder, 1 kV AC, DC, Frequency band: 100 kHz DIFFERENTIAL PROBE P9000-02 (Switch between Wave/RMS) For Memory HiCorder, 1 kV AC, DC, Frequency band: 100 kHz AC ADAPTER Z1008 100 to 240 V AC INPUT CORD (E) \*Voltage to ground is within this product's specifications \*Separate power source is also required. **DIFFERENTIAL PROBE 9322** 1 kV AC, 2 kV DC, Frequency band: 10 MHz AC ADAPTER 9418-15

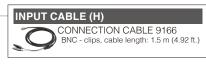

100 to 240 V AC

Precautions for connecting current sensors and current probes

\*The bandwidth of current sensors and current probes is limited by the bandwidth of the current unit to be connected.

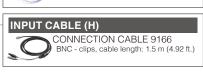

\*Depending on the combination of current sensors and current probes, physical and space limitations may prevent simultaneous connection. Hioki can assist with special order conversion cables - please inquire with your local distributor.

\*A total of 9 current sensors and current probes can be connected simultaneously to the Memory HiCorder. However, when using the CT6710 or CT6711, a total of 4 probes can be connected. (Total with the CURRENT UNIT U8977, CURRENT UNIT 8971, and PROBE POWER UNIT Z5021 connected)

\*Three U8977 current units and four 8971 current units can be simultaneously connected to the Memory HiCorder.

\*If combining a current sensor or current probe with a sensor power source and using the voltage input analog unit for current measurement, there is no limitation on the number of connections.

\*Only the U8977 can use the CT9920 to convert a PL14 connector sensor. The 8971 does not support this combination.

# INPUT CORD (G) \*For the MR8990 \*Voltage is limited to the specifications of the input modules in u

600 V

TEST LEAD L2200

MAGNETIC ADAPTER L4937

GRABBER CLIP L9243

Attach to the tip of banana plug cables, CAT III

Attaches to the tip of banana plug cables, red/black set, full length: 185 mm (7.28 in.), CAT II 1000 V

Cable length: 70 cm (2.30 ft.), tips interchangeable with a pin test lead or alligator clip, maximum input voltage: CAT IV 600 V, CAT III 1000 V

## R&D testing and analysis Meeting the demanding requirements of a broad range of industries

We have drastically improved the technology used in our Memory HiCorders, developing the MR6000 Memory HiCorder to meet the advanced demands of all industries.

#### Unit selection guide (18 types)

Unit interchangeability

The following units are compatible with the MR6000. Some units in the list are also compatible with the MEMORY HiCORDER MR8827, MR8847A, MR8740, MR8741, and MR8740-50. Please check the brochure of each product.
