

HIOKI

Hioki's Calibration Partnership with the Swedish National Metrology Institute RISE

RI SE

Research Institutes
of Sweden

Hioki is a unique power analyzer manufacturer with the distinctive capability of designing and delivering not only power analyzers but also high precision current sensors. This enables us to calibrate combined accuracies (not only amplitude but also phase angle) of power analyzers and current sensors at various frequencies besides 50/60Hz. **What other manufacturer in the world can do that?**

Hioki began delivering high accuracy current sensors in 1971, and throughout the 4 decades, we have culminated our experience and honed our technical expertise to become a world leader in sensing technologies. In the height of the 70's, people around the world wished for world peace and imagined a more ideal society. At the same time, Hioki also began our journey to deliver the ideal solutions for current measurement to the industry.

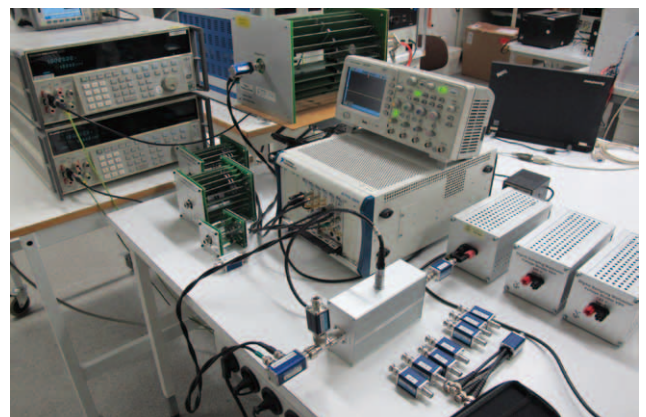

Since that time, all of our current sensors and power analyzers have been **manufactured in Hioki's world-class facilities in Nagano, Japan** (host city of the 1998 Winter Olympic Games), keeping all functions from research and development to production to final inspection within Japan. Throughout our more than 80-year history in the test and measurement industry, Hioki has always been committed to providing convenient solutions to our customers, and our conviction to continue delivering user-friendly products will never waiver.

To further contribute to the convenience of our European customers, Hioki is proud to announce the establishment of a new **calibration partnership with the Swedish National Metrology Institute (NMI), Research Institute of Sweden (RISE), for the calibration of our Power Analyzers PW6001 and PW3390s and Power Meters PW333x Series, together with CTs and current sensors.**

Known as SP for a long time, and then reorganized as RISE this year, the company is **the one-and-only scientific summit in Sweden to serve as the country's NMI. Also, their overwhelming capabilities to calibrate power analyzers** are well-known not only in Sweden but also all over Europe.

It is indeed an honor for Hioki and our customers to have access to and be certified by RISE's state-of-the-art calibration facilities and techniques for our power analyzers.

For details on how to obtain calibration of Hioki power analyzers at RISE, please contact HIOKI EUROPE GmbH at hioki@hioki.eu.
