

Maintenance of corrosion protection work

Waveforms from the maintenance of corrosion protection work can be recorded and stored for long periods of time.

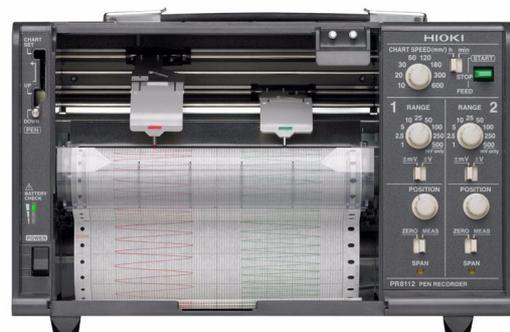

■ Highlights

- Maintenance of corrosion protection work (electric corrosion) often requires recording waveforms outdoors and the recorded waveforms sometimes need to be stored for long periods of time.
- PR8111 Pen Recorder has wide ranges, from highly-sensitive (1mV Range) to high voltage (250V Range), allowing you to apply it in various applications. For example, the pen recorder has often been used for leakage current measurement between the track(rail) and buried facilities of DC electric railroads.
- Since it is powered by batteries, the PR8111 can be used for recording anywhere in the field.
